A school transportation-related crash is a crash which involves, either directly or indirectly, a school bus body vehicle, or a non-school bus functioning as a school bus, transporting children to or from school or school-related activities.

Since 1998 there have been about 414,399 fatal motor vehicle traffic crashes. Of those, 0.34 percent (1,409) were classified as school transportation-related.

Since 1998, 1,564 people have died in school transportation-related crashes—an average of 142 fatalities per year. Most of the people who lost their lives in those crashes (72%) were occupants of other vehicles involved. Nonoccupants (pedestrians, bicyclists, etc.) accounted for 20 percent of the deaths, and occupants of school transportation vehicles accounted for 8 percent.

Since 1998, 149 school-age pedestrians (younger than 19) have died in school transportation-related crashes. Over two-thirds (69%) were killed by school buses, 7 percent by vehicles functioning as school buses, and 24 percent by other vehicles involved in the crashes. About one-half (47%) of all school-age pedestrians killed in school transportation-related crashes were between the ages of 5 and 7.

“An average of 19 school-age children die in school transportation-related traffic crashes each year—5 occupants of school transportation vehicles and 14 pedestrians.”

Figure 1
Total Occupant and Pedestrian Fatalities in School Transportation-Related Crashes, by Age Group, 1998-2008

Note: Occupant fatalities shown are for occupants of school buses and non-school buses used as school buses.
On average, 14 school-age pedestrians are killed by school transportation vehicles (school buses and non-school bus vehicles used as school buses) each year, and 3 are killed by other vehicles involved in school bus-related crashes.

More school-age pedestrians have been killed between the hours of 3 p.m. and 4 p.m. than any other time of day.

*Does not include occupants of other vehicles in school transportation-related crashes.

“From 1998 to 2008, about one-half (47%) of the school-age pedestrians killed in school transportation-related crashes were between 5 and 7 years old.”

Between 1998 and 2008, 96 crashes occurred in which at least one occupant of a school transportation vehicle died. More than half of those crashes (59%) involved at least one other vehicle. In the 39 single-vehicle crashes, 46 occupants — 17 drivers and 29 passengers — were killed. In the 57 multiple-vehicle crashes, 32 drivers and 40 passengers died. In the 39 single-vehicle crashes, the first harmful events were as follows: striking a fixed object (23 crashes), a person falling from the vehicle (5 crashes), the vehicle overturning (5 crashes), the vehicle colliding with a train (2 crashes), other non-collision (1 crash), and collision with a non-fixed object (1 crash).

In 51 percent of all crashes involving fatalities to occupants of a school transportation vehicle, the principal point of impact was the front of the vehicle.

Since 1998, four drivers and one passenger have died in school bus body vehicles providing transportation for purposes other than school or school-related activities (churches, civic organizations, etc.). In 1987, one such multi-vehicle crash resulted in the deaths of 27 occupants, including the driver.

"Impacts to the front of the school transportation vehicle occur in 51 percent of fatal school transportation-related crashes."

### For more information:

Information on traffic fatalities is available from the National Center for Statistics and Analysis, NVS-424, 1200 New Jersey Avenue SE., Washington, DC 20590. NCSA can be contacted at 800-934-8517. Fax messages should be sent to 202-366-7078. General information on highway traffic safety can be accessed by Internet users at www.nhtsa.gov/portal/site/nhtsa/ncsa. To report a safety-related problem or to inquire about motor vehicle safety information, contact the Vehicle Safety Hotline at 888-327-4236.
