

DOT HS 812 005

Revised May 2014

Older Population

In 2012, there were 5,560 people 65 and older killed and 214,000 injured in motor vehicle traffic crashes. These older people made up 17 percent of all traffic fatalities and 9 percent of all people injured in traffic crashes during the year. Compared to 2011, fatalities among people 65 and older increased by 3 percent. Among people injured in this age group there was a 16-percent increase from 2011.

In 2012, 14 percent of the total U.S. resident population (43.1 million people) were 65 and older. The older population fatality rate per 100,000 U.S. resident population steadily declined from 18.7 in 2003 to 12.9 in 2012 (Figure 1).

In 2012, 17 percent of all traffic fatalities in the United States were among people 65 and older.

Figure 1
Motor Vehicle Traffic Fatality Rates by Age Group, 2003–2012

Among the 65-and-older age group from 2003 to 2012, the total population increased by 20 percent (males increased by 26% and females increased by 16%). However, as seen in Table 1, driver fatalities for this age group declined by 15 percent (decreased for males by 10% and for females by 26%); motorcyclist fatalities increased by 201 percent (males increased by 194% and females increased by 333%). Furthermore, among the 65-and-older age group from 2003 to 2012, pedalcyclist fatalities increased by 80 percent (males increased by 83% and females by 50%).

*Total includes unknown gender.

Drivers

There were 35 million licensed older drivers in 2011 (2012 data not available)—a 21-percent increase from 2002. In contrast, the total number of licensed drivers increased by only 9 percent from 2002 to 2011. Older drivers made up 16 percent of all licensed drivers in 2011, compared with 15 percent in 2002.

As shown in Table 2, of all drivers, older drivers involved in fatal crashes had the lowest proportion of drivers with a blood alcohol concentration (BAC) of .08 grams per deciliter (g/dL) or higher.

Table 2

Age and Alcohol of Drivers Involved in Fatal Crashes, 2012

Age Group (Years)	Drivers Involved in Fatal Crashes		
	Total	BAC= .08+	
		Number	Percent of Total
<16	121	10	8
16–20	4,211	758	18
21–34	13,688	4,120	30
35–54	14,912	3,372	23
55–64	5,899	805	14
65+	5,744	413	7
Total	*45,337	9,678	21

*Includes 762 drivers of unknown age.

Thirteen percent fewer people were killed in crashes involving older drivers from 6,805 in 2003 to 5,894 in 2012. While the overall trend shows a decline for those 10 years, the number of people killed in crashes involving older drivers increased in 2012 by 5 percent compared to 2011 (Table 3).

Table 3

Fatalities in Crashes Involving Drivers 65 and Older, 2003–2012

Year	2003	2004	2005	2006	2007	2008	2009	2010	2011	2012
Fatalities	6,805	6,585	6,647	6,334	6,169	5,825	5,613	5,782	5,636	5,894

Older drivers made up 16 percent of all licensed drivers in 2011, compared with 15 percent in 2002.

Fatalities in crashes involving older drivers declined by 13 percent from 2003 to 2012.

Most traffic fatalities involving older drivers in 2012 occurred during the daytime (75%), occurred on weekdays (69%), and involved other vehicles (64%). Among drivers involved in fatal crashes in 2012, older drivers had the lowest involvement rate per population as compared to other driver age groups. The involvement rate for male drivers (65+) was 21.73 and the involvement rate for female drivers (65+) was 6.80 (Figure 2).

Figure 2

Driver Involvement Rates in Fatal Crashes by Age and Gender, 2012

For older pedestrians, 68 percent of fatalities in 2012 occurred at non-intersection locations.

Pedestrians

For older people, 68 percent of pedestrian fatalities in 2012 occurred at non-intersection locations. For other pedestrians, 81 percent of fatalities occurred at non-intersection locations.

Among all fatally injured adult pedestrians, older pedestrians had the lowest proportion of pedestrians with BACs of .08 g/dL or higher (Table 4).

Table 4

Pedestrian Fatalities by Age Group and BAC, 2012

Age Group (Years)	Total	BAC= .08+	
		Number	Percent of Total
<16	292	7	2
16-20	265	68	25
21-34	1,028	480	47
35-54	1,475	704	48
55-64	724	240	33
65+	935	99	11
Total	*4,743	1,608	34

*Includes 24 pedestrian fatalities of unknown age.

Older Population Age Groups

In 2012, among the older population, the fatality rate for the 80-84 age group was 16.39 per 100,000 population, which was higher than any other older age group. The fatality rate for the 85+ age group declined by 37 percent, from 25.46 in 2003 to 15.98 in 2012 (Figure 3).

Motor Vehicle Traffic Fatality Rates Among Older Populations by Age Group, 2003–2012

For more information:

Information on traffic fatalities is available from the National Center for Statistics and Analysis (NCSA), NVS-424, 1200 New Jersey Avenue SE., Washington, DC 20590. NCSA can be contacted at 800-934-8517 or via the following e-mail address: ncsaweb@dot.gov. General information on highway traffic safety can be accessed by Internet users at www.nhtsa.gov/NCSA. To report a safety-related problem or to inquire about motor vehicle safety information, contact the Vehicle Safety Hotline at 888-327-4236.

Other fact sheets available from the National Center for Statistics and Analysis are *Alcohol*, *African American*, *Bicyclists and Other Cyclists*, *Children*, *Hispanic*, *Large Trucks*, *Motorcycles*, *Occupant Protection*, *Overview*, *Pedestrians*, *Race and Ethnicity*, *Rural/Urban Comparisons*, *School Transportation-Related Crashes*, *Speeding*, *State Alcohol Estimates*, *State Traffic Data*, and *Young Drivers*. Detailed data on motor vehicle traffic crashes are published annually in *Traffic Safety Facts: A Compilation of Motor Vehicle Crash Data from the Fatality Analysis Reporting System and the General Estimates System*. The fact sheets and annual Traffic Safety Facts report can be accessed online at www-nrd.nhtsa.dot.gov/CATS/index.aspx.

U.S. Department
of Transportation
**National Highway
Traffic Safety
Administration**

In 2012, fatal crash driver involvement rates per 100,000 population among older male drivers was highest (24.95) in the 85-and-older age group; and among older female drivers was highest in the 80-84 age group (7.73) (Figure 4).

Figure 4

Involvement Rates for Older Drivers in Fatal Crashes by Age Group and Gender 2012

Driver Involvement by State and Age Group

Table 5 shows driver involvement in fatal traffic crashes by State and driver age group. Among all States, driver involvement in 2012 ranged from highest (4,564) to lowest (20) depending on the size and population of the State. Driver involvement in fatal crashes was highest in Texas (4,564), followed by California (3,811) and Florida (3,412), and lowest in the District of Columbia (20). Driver involvement in fatal crashes in 2012 among driver (65+) ranged from 474 (highest) to 0 (lowest). Driver involvement in fatal crashes in the 65+ age group was highest in Florida (474), followed by California (410) and Texas (393), and lowest in the District of Columbia (0).

Fatalities by State and Age Group

Table 6 shows fatalities in Traffic Crashes by State and Age Group. Among all States, fatalities in motor vehicle traffic crashes in 2012 ranged from highest (3,398) to lowest (15) depending on the size and population of the State. Fatalities in motor vehicle traffic crashes were highest in Texas (3,398), followed by California (2,857) and Florida (2,424), and lowest in the District of Columbia (15). Fatalities in the 65+ age group were highest in Florida (450), followed by California (443) and Texas (401), and lowest in the District of Columbia (1).
