# TRAFFIC SAFETY FACTS 2014

*A Compilation of Motor Vehicle Crash Data from the  
Fatality Analysis Reporting System and the General Estimates System*

# 2014 NATIONAL STATISTICS

## POLICE-REPORTED MOTOR VEHICLE TRAFFIC CRASHES

Fatal .....	29,989
Injury .....	1,648,000
Property Damage Only .....	4,387,000
<b>Total .....</b>	<b>6,064,000</b>

## TRAFFIC CRASH VICTIMS

	<b>Killed</b>	<b>Injured</b>
<b>Occupants .....</b>	<b>22,276</b>	<b>2,121,000</b>
Drivers .....	16,454	1,524,000
Passengers .....	5,751	597,000
Unknown .....	71	*
<b>Motorcyclists .....</b>	<b>4,586</b>	<b>92,000</b>
<b>Nonoccupants .....</b>	<b>5,813</b>	<b>125,000</b>
Pedestrians .....	4,884	65,000
Pedalcyclists .....	726	50,000
Other/Unknown .....	203	10,000
<b>Total .....</b>	<b>32,675</b>	<b>2,338,000</b>

## OTHER NATIONAL STATISTICS

Vehicle Miles Traveled .....	3,025,656,000,000
Resident Population .....	318,857,056
Registered Vehicles .....	274,804,904
Licensed Drivers .....	214,092,472
Economic Cost of Traffic Crashes (2010) (estimate for reported and unreported crashes) .....	\$242 billion

## NATIONAL RATES: FATALITIES

Fatalities per 100 Million Vehicle Miles Traveled .....	1.08
Fatalities per 100,000 Population .....	10.25
Fatalities per 100,000 Registered Vehicles .....	11.89
Fatalities per 100,000 Licensed Drivers .....	15.26

## NATIONAL RATES: INJURED PERSONS

Injured Persons per 100 Million Vehicle Miles Traveled .....	77
Injured Persons per 100,000 Population .....	733
Injured Persons per 100,000 Registered Vehicles .....	851
Injured Persons per 100,000 Licensed Drivers .....	1,092

\*Less than 500.

# Traffic Safety Facts 2014

*A Compilation of Motor Vehicle Crash Data from the  
Fatality Analysis Reporting System and the General Estimates System*

*National Highway Traffic Safety Administration*

*National Center for Statistics and Analysis*

*U.S. Department of Transportation*

*Washington, DC 20590*

## FOR MORE INFORMATION

Information on traffic fatalities is available from the National Center for Statistics and Analysis (NCSA), NSA-230, 1200 New Jersey Avenue, SE, Washington, DC 20590. NCSA can be contacted at 800-934-8517 or e-mail [ncsaweb@dot.gov](mailto:ncsaweb@dot.gov). General information on highway traffic safety is online at [www.nhtsa.gov/NCSA](http://www.nhtsa.gov/NCSA). To report a safety-related problem or to inquire about motor vehicle safety information, contact the Vehicle Safety Hotline at 888-327-4236. Fact sheets available from the National Center for Statistics and Analysis are *Alcohol-Impaired Driving*, *Bicyclists and Other Cyclists*, *Children*, *Large Trucks*, *Motorcycles*, *Occupant Protection*, *Older Population*, *Overview*, *Passenger Vehicles*, *Pedestrians*, *Rural/Urban Comparisons*, *School Transportation-Related Crashes*, *Speeding*, *State Alcohol Estimates*, *State Traffic Data*, and *Young Drivers*. The fact sheets and annual *Traffic Safety Facts* reports can be accessed online at [www-nrd.nhtsa.dot.gov/CATS/index.aspx](http://www-nrd.nhtsa.dot.gov/CATS/index.aspx).

# TABLES

## TRENDS: General

1. Crashes by Crash Severity, 1988-2014 .....	17
2. Persons Killed or Injured and Fatality and Injury Rates per Population, Licensed Drivers, Registered Vehicles, and Vehicle Miles Traveled, 1966-2014 .....	18
3. Vehicles Involved in Crashes and Involvement Rates per Vehicle Miles of Travel and per Registered Vehicle by Vehicle Type and Crash Severity, 1975-2014 .....	21
4. Persons Killed or Injured by Person Type and Vehicle Type, 1975-2014 .....	23
5. Drivers Involved in Crashes and Involvement Rates per Licensed Driver by Sex and Crash Severity, 1975-2014 .....	25

## TRENDS: Occupants

6. Motor Vehicle Occupant and Motorcyclist Fatality and Injury Rates per Population by Age Group, 1975-2014 .....	28
7. Passenger Car Occupants Killed or Injured and Fatality and Injury Rates per Registered Vehicle and Vehicle Miles of Travel, 1975-2014 .....	30
8. Light Truck Occupants Killed or Injured and Fatality and Injury Rates per Registered Vehicle and Vehicle Miles of Travel, 1975-2014 .....	32
9. Large Truck Occupants Killed or Injured and Fatality and Injury Rates per Registered Vehicle and Vehicle Miles of Travel, 1975-2014 .....	34
10. Motorcyclists Killed or Injured and Fatality and Injury Rates per Registered Vehicle and Vehicle Miles of Travel, 1975-2014 .....	36

## TRENDS: Large Truck Related

11. Persons Killed or Injured in Crashes Involving a Large Truck by Person Type and Crash Type, 1975-2014 .....	38
---	----

## TRENDS: Nonoccupants

12. Nonoccupant Fatality and Injury Rates per Population by Age Group, 1975-2014 .....	40
--	----

## TRENDS: Alcohol

13. Persons Killed, by Highest Driver Blood Alcohol Concentration (BAC) in the Crash, 1982-2014 ...	42
14. Persons Killed and Percent Alcohol-Impaired Driving During Holiday Periods, 1982-2014 .....	44
15. Drivers in Fatal Crashes by Blood Alcohol Concentration (BAC) and Time of Day, 1982-2014 .....	46
16. Drivers in Fatal Crashes by Blood Alcohol Concentration (BAC) and Sex, 1982-2014 .....	47
17. Drivers in Fatal Crashes by Blood Alcohol Concentration (BAC) and Vehicle Type, 1982-2014 ...	48
18. Drivers in Fatal Crashes by Blood Alcohol Concentration (BAC) and Age, 1982-2014 .....	50
19. Drivers in Fatal Crashes by Blood Alcohol Concentration (BAC) and Survival Status, 1982-2014 ...	54
20. Pedestrians Killed, 14 Years and Older, by Blood Alcohol Concentration (BAC), 1982-2014 .....	55

## TRENDS: Restraints

21. Drivers of Passenger Cars and Light Trucks in Crashes by Crash Severity and Restraint Use, 1975-2014 .....	56
22. Occupants of Passenger Cars and Light Trucks Killed or Injured, by Restraint Use, 1975-2014 .....	58

## TRENDS: Rollover

23. Passenger Car and Light Truck Occupants Killed, by Vehicle Type and Rollover Occurrence, 1982-2014 .....	60
--	----

## Tables (Continued)

### CRASHES: Time

24. Crashes and Crash Rates by Month and Crash Severity .....	64
25. Crashes by Time of Day, Day of Week, and Crash Severity .....	65
26. Crashes by Weather Condition, Light Condition, and Crash Severity .....	67
27. Fatal Crashes by Emergency Medical Services (EMS) Response Times Within Designated Minutes and by Land Use .....	68

### CRASHES: Location

28. Crashes by Crash Type, Relation to Roadway, and Crash Severity .....	69
--	----

### CRASHES: Circumstances

29. Crashes by First Harmful Event, Manner of Collision, and Crash Severity .....	70
30. Two-Vehicle Crashes by Vehicle Type and Crash Severity .....	71

### CRASHES: Alcohol

31. Fatal Crashes and Percent Alcohol-Impaired Driving, by Time of Day and Crash Type .....	72
---	----

### VEHICLES: All Vehicles

32. Vehicles Involved in Crashes by Relation to Junction, Traffic Control Device, and Crash Severity ...	78
33. Vehicles Involved in Crashes by Speed Limit, Crash Type, and Crash Severity .....	79
34. Vehicles Involved in Fatal Crashes by Speed Limit and Land Use .....	80
35. Vehicles Involved in Crashes by Number of Lanes, Trafficway Flow, and Crash Severity .....	81
36. Vehicles Involved in Crashes by Vehicle Type and Crash Severity .....	82
37. Vehicles Involved in Fatal Crashes by Body Type .....	83
38. Vehicles Involved in Crashes by Vehicle Type, Rollover Occurrence, and Crash Severity .....	84
39. Vehicles Involved in Crashes by Vehicle Type, Fire Occurrence, and Crash Severity .....	86
40. Vehicles Involved in Single- and Two-Vehicle Crashes by Vehicle Maneuver and Crash Severity ...	87
41. Vehicles Involved in Fatal Crashes by Roadway Function Class, Crash Type, and Hazardous Cargo .....	88

### VEHICLES: Passenger Cars

42. Passenger Cars Involved in Crashes by Most Harmful Event and Crash Severity .....	91
43. Passenger Cars Involved in Crashes by Initial Point of Impact, Crash Severity, and Crash Type .....	92

### VEHICLES: Light Trucks

44. Light Trucks Involved in Crashes by Most Harmful Event and Crash Severity .....	93
45. Light Trucks Involved in Crashes by Initial Point of Impact, Crash Severity, and Crash Type .....	94

### VEHICLES: Large Trucks

46. Large Trucks Involved in Crashes by Most Harmful Event and Crash Severity .....	95
47. Large Trucks Involved in Crashes by Initial Point of Impact, Crash Severity, and Crash Type .....	96
48. Large Trucks Involved in Crashes by Truck Type, Rollover Occurrence, and Crash Severity .....	97
49. Truck Tractors with Trailers Involved in Crashes by Number of Trailers, Jackknife Occurrence, and Crash Severity .....	98

# Tables (Continued)

## VEHICLES: Motorcycles

- 50. Motorcycles Involved in Crashes by Most Harmful Event and Crash Severity ..... 99
- 51. Motorcycles Involved in Crashes by Initial Point of Impact, Crash Severity, and Crash Type ..... 100

## VEHICLES: Buses

- 52. Buses Involved in Crashes by Most Harmful Event and Crash Severity ..... 101
- 53. Buses Involved in Crashes by Initial Point of Impact, Crash Severity, and Crash Type ..... 102

## PEOPLE: All Victims

- 54. Persons Killed or Injured, by Person Type and Injury Severity ..... 106
- 55. Persons Killed or Injured, by Age and Injury Severity ..... 106
- 56. Persons Killed or Injured, by Sex and Injury Severity ..... 106
- 57. Persons Killed or Injured and Fatality and Injury Rates per 100,000 Population, by Age and Sex .... 108
- 58. Persons Killed or Injured in Crashes, by Weather Condition and Light Condition ..... 110
- 59. Persons Killed in Crashes and Percent Alcohol-Impaired Driving Fatalities,  
by Time of Day and Crash Type ..... 110
- 60. Persons Killed in Work Zones, by Roadway Function Class and Person Type ..... 112
- 61. Persons Killed in Crashes Involving Emergency Vehicles, by Person Type, Crash Type,  
and Vehicle Type ..... 112

## PEOPLE: Drivers

- 62. Driver Involvement Rates per 100,000 Licensed Drivers, by Age, Sex, and Crash Severity. .... 115
- 63. Drivers and Motorcycle Riders Involved in Fatal Crashes, by Previous Driving Record  
and License Type Compliance ..... 117
- 64. Related Factors for Drivers and Motorcycle Riders Involved in Fatal Crashes ..... 117

## PEOPLE: Occupants

- 65. Vehicle Occupants Killed or Injured, by Vehicle Type, Person Type, and Injury Severity ..... 118
- 66. Vehicle Occupants Killed or Injured in Crashes, by Speed Limit and Crash Type ..... 119
- 67. Vehicle Occupants Killed in Crashes, by Speed Limit and Land Use ..... 120
- 68. Vehicle Occupants Killed or Injured, by Sex and Vehicle Type ..... 121
- 69. Vehicle Occupants Killed or Injured, by Age and Vehicle Type ..... 122
- 70. Vehicle Occupants Killed or Injured, by Age, Person Type, and Sex ..... 123
- 71. Vehicle Occupants Killed or Injured, by Vehicle Type and Most Harmful Event ..... 124
- 72. Vehicle Occupants Killed or Injured, by Initial Point of Impact and Vehicle Type ..... 125
- 73. Vehicle Occupants Killed or Injured, by Vehicle Type and Ejection ..... 126
- 74. Occupants Killed or Injured in Two-Vehicle Crashes, by Vehicle Types Involved ..... 127
- 75. Occupants Involved in Fatal Crashes and Occupant Fatalities, by Vehicle Body Type ..... 128
- 76. Passenger Car Occupants Involved in Fatal Crashes and Occupants Killed, by Car Wheelbase Size .. 129

## Tables (Continued)

### PEOPLE: Alcohol

77. Persons Killed and Alcohol-Impaired Driving Fatalities, by Person Type .....	130
78. Drivers and Motorcycle Riders Involved in Fatal Crashes, by Age and Driver's Blood Alcohol Concentration (BAC).....	130
79. Drivers and Motorcycle Riders Killed in Crashes, by Time of Day, Day of Week, Age, Alcohol Impairment, and Crash Type .....	132
80. Drivers and Motorcycle Riders Killed in Crashes, by Age and Driver's Blood Alcohol Concentration (BAC).....	132
81. Drivers and Motorcycle Riders Involved in Fatal Crashes, by Vehicle Type and Driver's Blood Alcohol Concentration (BAC).....	134
82. Persons Killed, by Age and Highest Driver Blood Alcohol Concentration (BAC) in the Crash .....	135
83. Pedestrians Killed, by Pedestrian's and Driver's Blood Alcohol Concentration (BAC) .....	135

# INTRODUCTION

In this annual report, *Traffic Safety Facts 2014: A Compilation of Motor Vehicle Crash Data from the Fatality Analysis Reporting System and the General Estimates System*, the National Highway Traffic Safety Administration (NHTSA) presents descriptive statistics about traffic crashes of all severities, from those that result in property damage to those that result in the loss of human life.

Information from two of NHTSA's primary data systems has been combined to create a single source for motor vehicle crash statistics. The first data system, the Fatality Analysis Reporting System (FARS), is probably the better known of the two sources. Established in 1975, FARS contains data on the most severe traffic crashes, those in which someone was killed. The second source is the National Automotive Sampling System General Estimates System (GES), which began operation in 1988. GES contains data from a nationally representative sample of police-reported crashes of all severities, including those that result in death, injury, or property damage. The next two sections provide a brief description of FARS and GES.

Both systems were designed and developed by NHTSA's National Center for Statistics and Analysis (NCSA) to provide an overall measure of highway safety, to help identify traffic safety problems, to suggest solutions, and to help provide an objective basis on which to evaluate the effectiveness of motor vehicle safety standards and highway safety initiatives. Data from these systems are used to answer requests for information from the international and national highway traffic safety communities, including State and local governments, the Congress, Federal agencies, research organizations, industry, the media, and private citizens.

# FARS OPERATIONS

The Fatality Analysis Reporting System (FARS), which became operational in 1975, contains data on a census of fatal traffic crashes within the 50 States, the District of Columbia, and Puerto Rico. To be included in FARS, a crash must involve a motor vehicle traveling on a trafficway customarily open to the public, and must result in the death of an occupant of a vehicle or a nonoccupant within 30 days of the crash.

NHTSA has a cooperative agreement with an agency in each State's government to provide information on all qualifying fatal crashes in the State. These agreements are managed by Regional Contracting Officer's Technical Representatives located in the 10 NHTSA Regional Offices. Trained State employees, called "FARS Analysts," are responsible for gathering, translating, and transmitting their State's data to NCSA in a standard format. The number of analysts varies by State, depending on the number of fatal crashes and the ease of obtaining data.

FARS data are obtained solely from the State's existing documents:

Police Accident Reports	Death Certificates
State Vehicle Registration Files	Coroner/Medical Examiner Reports
State Driver Licensing Files	Hospital Medical Reports
State Highway Department Data	Emergency Medical Service Reports
Vital Statistics	Other State Records

From these documents, the analysts code more than 100 FARS data elements. (See Appendix A for a list of the FARS data elements.) The specific data elements may be modified slightly each year to conform to changing user needs, vehicle characteristics, and highway safety emphasis areas. The data collected within FARS do not include any personal identifying information, such as names, addresses, or social security numbers. Thus, any data kept in FARS files and made available to the public fully conform to the Privacy Act.

Each analyst enters data into a local microcomputer data file, and daily updates are sent to NHTSA's central computer database. Data are automatically checked when entered for acceptable range values and for consistency, enabling the analyst to make corrections immediately. Several programs continually monitor and improve the completeness and accuracy of the data. The 2014 FARS data file used for the statistics in this report was created in July 2015; however, the 2014 FARS file was *officially* closed in January 2016. This additional time provides the opportunity for submission of important variable data requiring outside sources, which may lead to changes in the final counts. The updated final counts for 2013 are reflected in this report. The updated final counts for 2014 will be reflected in the 2015 annual report.

The National Automotive Sampling System (NASS) - General Estimates System (GES) data are obtained from a nationally representative probability sample selected from all police-reported crashes. The system began operation in 1988. To be eligible for the GES sample, a police accident report (PAR) must be completed for the crash, and the crash must involve at least one motor vehicle traveling on a trafficway and must result in property damage, injury, or death. Although various sources suggest that about half the motor vehicle crashes in the country are not reported to police, the majority of these unreported crashes involve only minor property damage and no significant personal injury. By restricting attention to police-reported crashes, the GES concentrates on those crashes of greatest concern to the highway safety community and the general public.

GES data collectors make weekly visits to 410 police jurisdictions in 60 sites across the United States, where they randomly sample about 55,000 PARs per year. The collectors obtain copies of the PARs and send them to the NASS quality control centers for coding. No other data are collected beyond the selected PARs—no driver license, vehicle registration, or medical information is obtained.

Trained data entry personnel interpret and code data directly from the PARs into an electronic data file. Approximately 90 data elements are coded into a common format. (See Appendix B for a list of the GES data elements.) Some elements are modified every other year to meet the changing needs of the highway safety community. To protect individual privacy, no personal information (names, addresses, specific crash locations) is coded. During data coding, the data are checked electronically for validity and consistency. After the data file is created, further quality checks are performed on the data through computer processing and by the data coding supervisors. The 2014 file used for the statistics in this report was completed in July 2015.

# ABOUT THIS REPORT

Fatal crash data from FARS and nonfatal crash data from GES are presented in this report in five chapters. Chapter 1, “Trends,” presents data from all years of FARS (1975 through 2014) and GES (1988 through 2014). The remaining chapters present data only from 2014. Chapter 2, “Crashes,” describes general characteristics of crashes, such as when and how often they occurred, where they occurred, and what happened during the crash. Chapter 3, “Vehicles,” concentrates on the types of vehicles involved in crashes and the damage to the vehicles. Chapter 4, “People,” is the largest chapter of this report, with statistics about drivers, passengers, pedestrians, and pedalcyclists. The last chapter of the report, “States,” contains information about crashes for each State, the District of Columbia, and Puerto Rico. Terms used throughout the report are defined in the Glossary.

About three-quarters of the tables in this report present data from both FARS and GES. The remaining tables contain FARS data only. Statistics describing fatal crashes or fatalities have been derived from FARS. Statistics describing injury crashes, property-damage-only crashes, or nonfatal injuries have been derived from GES. The reader should be aware that FARS numbers are actual counts of fatalities or fatal crashes, whereas GES numbers are estimates of counts of crashes and injuries and are subject to sampling and nonsampling errors. (See Appendix C for more information on these errors.) To emphasize this difference, FARS numbers are not rounded, while GES estimates have been rounded to the nearest thousand. As a result of the rounding, for some tables, the sum of the row or column entries may not equal the row or column total. In addition, percentages have been calculated prior to rounding.

The reader may also notice that many tables have rows or footnotes for “unknowns” for FARS data, but not for GES data. The reason for this difference is that almost all the GES unknown data have been assigned values through complex statistical procedures. FARS unknown data, on the other hand, are not assigned values, with the exception of blood alcohol concentration (BAC) test results. When the alcohol test results are unknown, BAC values have been assigned to drivers and nonoccupants involved in fatal crashes, using a method of *multiple imputation* that was revised in 2001. More information on the multiple imputation method, including detailed tabulations of alcohol involvement in various categories (age, sex, time of day, etc.), is available in NHTSA Technical Report DOT HS 809 403, *Transitioning to Multiple Imputation: A New Method to Estimate Missing Blood Alcohol Concentration (BAC) Values in FARS*.

## FARS/NASS GES Standardization

There have been significant changes to FARS and NASS GES data as a result of the standardization of data elements between the two systems. The FARS/NASS GES Standardization began in 2006, with the second phase being implemented in the 2010 data collection year. The definition and element attribute changes introduced in 2010 are the most substantive and most numerous changes that have been made in one year in the reconciliation of the FARS and NASS GES data systems. As a single, unified data entry system, FARS/NASS GES will be compatible with the Model Minimum Uniform Crash Criteria (MMUCC), the guideline used by nearly all States to develop and revise their crash forms and databases. Once complete, the FARS/NASS GES standardization will simplify crash data coding and analysis, as well as reducing costs and errors.

Probably the most notable changes are the introduction of precrash information in FARS (already collected in NASS GES) and a change in “case structure,” or how the groups of related data elements are organized. The structure changes include changes to how the data are now stored and made available. For example, for FARS, there are now 16 data tables rather than 4, as a result of the change in the number of coding forms and the changes

# About This Report

in specific data elements. Several data elements that previously allowed only a specified number of responses now have a “select-all-that-apply” format. There is a separate data table for each of those data elements. The precrash information represents not only a new coding form but, more importantly, a largely new concept for FARS by attempting to collect data about the conditions, events, and driver actions that preceded and may have contributed to the crash. Precrash data, which have been included in NASS GES since 1992, are intended to improve crash avoidance research.

The new FARS Precrash Form information consists of 23 data elements, 9 of which were previously coded at the Crash level and 3 each at the Vehicle and Driver levels, and 8 new data elements. Nine trafficway descriptor data elements have been moved from the Crash level to the new Precrash level. These elements provide details about the characteristics of the trafficway selected for each vehicle.

Type of Intersection has been added to both systems. Bus Use and Vehicle Configuration are two Vehicle-level elements that are new to NASS GES in 2010 and modified for FARS (element attributes were consolidated and redefined). Condition at Time of Crash has been added at the Driver level and at the Non-Motor Vehicle Occupant level for both systems. For motor vehicle occupants, there is now an Indication of Misuse of Restraint System or Helmet Use in both systems.

Some of the information that had been collected under FARS Related Factors has been redistributed to new data elements. For example, some Person-Related Factors have been removed and are now captured in two new Non-Motor-Vehicle Occupant elements: Non-Motorist Action/Circumstances Prior to Crash; and Non-Motorist Action/Circumstances at Time of Crash. Some Vehicle-Related Factors are now captured under three new precrash elements: Contributing Circumstances, Motor Vehicle, and Driver Distracted By. The Driver Level element, Violations Charged, is now a “Select All That Apply” element.

## Changes from the *Traffic Safety Facts 2013 Report*

Vehicle registration data for passenger vehicles (cars and light trucks ) were obtained from R.L. Polk’s National Vehicle Population Profile (NVPP), which is a compilation of all passenger vehicles that have been registered in compliance with State requirements. Subsequently, overall registrations and passenger car and light truck vehicle miles traveled were revised by NHTSA, using a combination of Polk and Federal Highway Administration (FHWA) exposure data.

Polk recently enhanced the data quality of its NVPP, which resulted in a complete rewrite of the data, as a result of: (1) enhanced business rules for vehicles on the road, (2) more consistent reporting/processing across States, and (3) upgraded basis for vehicle coding. A comparison of Polk’s Old NVPP and New NVPP for 2011 shows that the enhancements resulted in an increase of more than 3 percent in NHTSA’s passenger vehicle registration counts, consisting of a 5.6 percent decrease in the 2011 passenger car count and a 14.6 percent increase in the 2011 light truck count from the Old NVPP to the New NVPP, as shown in the table on page 9. This report uses 2014, 2013, and 2012 data, as well as 2011 data updated from the data presented in the *Traffic Safety Facts 2011* report, for passenger car and light truck registrations based on Polk’s New NVPP. Consequently, the data in this report for vehicle registrations and vehicle miles traveled from 2011 through 2014 are not strictly comparable with the data for all prior years, which were based on Polk’s Old NVPP.

# About This Report

## Registered Vehicles: NCSA Revised Using Polk and FHWA Data

Year	Passenger Cars (Polk)	Light Truck (Polk)	Motorcycles (FHWA)	Buses (FHWA)	Large Trucks (FHWA)	NCSA Revised Total
2009 (Old NVPP)	137,203,972	102,008,600	7,929,724	841,993	10,973,214	258,957,503
2010 (Old NVPP)	135,310,480	102,376,147	8,009,503	846,051	10,770,054	257,312,235
2011 (Old NVPP)	134,543,655	103,594,529	8,437,502	666,064	10,270,693	257,512,443
2011 (New NVPP)	126,966,714	118,702,389	8,437,502	666,064	10,270,693	265,043,362
2012 (New NVPP)	127,077,676	118,690,690	8,454,939	764,509	10,659,380	265,647,194
2013 (New NVPP)	128,936,225	120,491,485	8,404,687	864,549	10,597,356	269,294,302
2014 (New NVPP)	131,138,925	123,470,278	8,417,718	872,027	10,905,956	274,804,904

Note: Minor adjustments were made to the 2011, 2012, and 2013 Passenger Car and Light Truck Polk registration counts presented in the *Traffic Safety Facts 2013* report. A small number of vehicles previously classified as passenger cars were reclassified as light trucks.

## Vehicle Miles Traveled: Polk and FHWA

Year	Passenger Cars (Revised FHWA Using Polk)	Light Trucks (Revised FHWA Using Polk)	Motorcycles (FHWA)	Buses (FHWA)	Large Trucks (FHWA)	Total (FHWA)
2009 (Old NVPP)	1,510,339	1,122,909	20,822	14,387	288,306	2,956,764
2010 (Old NVPP)	1,507,716	1,140,740	18,513	13,770	286,527	2,967,266
2011 (Old NVPP)	1,497,460	1,152,998	18,542	13,807	267,594	2,950,402
2011 (New NVPP)	1,369,810	1,280,648	18,542	13,807	267,594	2,950,402
2012 (New NVPP)	1,377,486	1,286,574	21,385	14,781	269,207	2,969,433
2013 (New NVPP)	1,384,194	1,293,536	20,366	15,167	275,017	2,988,280
2014 (New NVPP)	1,396,098	1,314,458	19,970	15,999	279,132	3,025,656

Note: NHTSA NCSA revises FHWA's Passenger Car and Light Truck vehicle miles traveled (VMT) using Polk's registration counts.

# DATA AVAILABILITY

While this report presents a wide spectrum of information in more than 100 tables and figures, it contains only a fraction of the data available from FARS and GES. Additional data from FARS (1975 through 2014) or from GES (1988 through 2014) are available in four ways:

- Modest requests for specific data will be answered by NCSA at no charge. Response usually requires about two weeks, depending on the nature and complexity of the data requested.
- FARS and GES data can be obtained by downloading any of the published files from the Internet, at <ftp://ftp.nhtsa.dot.gov/FARS> or <ftp://ftp.nhtsa.dot.gov/GES>. The files are available in SAS, sequential ASCII, and (for FARS only, not GES) DBF file formats. This will enable you to process the data using your own computer system.
- FARS data can also be accessed on the Web at [www-fars.nhtsa.dot.gov](http://www-fars.nhtsa.dot.gov). This Web site provides instant access to the 1994 through 2014 FARS data via the Create-a-Query, Create-a-Map, and Reports features. The Create-a-Query feature will enable you to process the data using our interactive user interface. The Create-a-Map feature will enable you to create State-by-State and county-by-county map displays from an inventory of report selections. The Reports feature is an inventory of the fatality statistical reports found in this publication. These are national reports for current and past years that may be customized by selection of State; and for State reports, county tabulation may be selected.

## VEHICLE SAFETY HOTLINE

To report a safety-related problem or to inquire about motor vehicle safety information, contact the Vehicle Safety Hotline at 888-327-4236.

# Data Availability

Requests for more information from FARS or GES should be directed to:

National Highway Traffic Safety Administration  
National Center for Statistics and Analysis  
NSA-230  
1200 New Jersey Avenue, SE  
Washington, DC 20590  
202-366-4198 or 800-934-8517  
Email: [NCSAWeb@dot.gov](mailto:NCSAWeb@dot.gov)

Requests for more information may also be submitted online via NCSA's Customer Automated Tracking System (CATS):

[www-nrd.nhtsa.dot.gov/CATS/index.aspx](http://www-nrd.nhtsa.dot.gov/CATS/index.aspx)

Additional information on all NHTSA's data files, including FARS and GES, can be found on the NCSA Web site: [www.nhtsa.gov/NCSA](http://www.nhtsa.gov/NCSA). Fact sheets, recent NCSA research notes, and abstracts of technical reports can be downloaded in portable document format (PDF). Comments and suggestions about the NCSA Web site can be e-mailed to the following address: [ncsaweb@dot.gov](mailto:ncsaweb@dot.gov).

Chapter 1

# TRENDS

# CHAPTER 1 ■ TRENDS

The tables in this chapter present statistics about police-reported motor vehicle crashes over time. Trends for fatal crashes and fatalities generally are presented from 1975 (when FARS began operation) to 2014; however, tables with alcohol data from FARS show data only for the years these data are available—1982 to 2014. Trends for nonfatal crashes and injured are presented from 1988 (when GES began operation) to 2014. Care should be taken when comparing nonfatal crash and injury statistics from one year to the next. Since the statistics derived from GES data are estimates, year-to-year differences may be the result of the sampling process, not the result of an actual trend. The variability or sampling errors associated with the estimates must be considered when making any year-to-year comparisons using GES data. (For more information on sampling error, see Appendix C.) Below are some of the statistics you will find in this chapter:

- Fatal crashes decreased by 0.7 percent from 2013 to 2014, and the fatality rate declined to 1.08 fatalities per 100 million vehicle miles of travel in 2014.
- The injury rate in 2014 remained at the 2013 level of 77 persons injured per 100 million vehicle miles of travel.
- The occupant fatality rate (including motorcyclists) per 100,000 population, which declined by 22.7 percent from 1975 to 1992, decreased by 34.7 percent from 1992 to 2014.
- The occupant injury rate (including motorcyclists) per 100,000 population, which declined by 13.6 percent from 1988 to 1992, decreased by 39.1 percent from 1992 to 2014.
- The nonoccupant fatality rate per 100,000 population has declined by 54.4 percent from 1975 to 2014.
- The nonoccupant injury rate per 100,000 population has declined by 50.6 percent from 1988 to 2014.
- The percent of alcohol-impaired driving fatalities has declined from 48 percent in 1982 to 31 percent in 2014.

Notes: Some States include restricted driver licenses and graduated driver licenses in their licensed driver counts. Due to an enhancement in the registration data provided by R.L. Polk & Co. for 2011 and later years, registration counts for those years changed considerably from the counts provided for 2010 and earlier years. This should be taken into account when comparing registration numbers and rates per registered vehicle for 2010 and earlier years with those for 2011 and later years. For more details, see "Changes from the *Traffic Safety Facts 2013 Report*" on page 8.

Notes: See Tables 7 through 10 for notes regarding an enhanced methodology used to estimate registered vehicles and vehicle miles traveled for 2007 and after. Some States include restricted driver licenses and graduated driver licenses in their licensed driver counts. Due to an enhancement in the registration data provided by R.L. Polk & Co. for 2011 and later years, registration counts for those years changed considerably from the counts provided for 2010 and earlier years. This should be taken into account when comparing registration numbers and rates per registered vehicle for 2010 and earlier years with those for 2011 and later years. For more details, see "Changes from the *Traffic Safety Facts 2013 Report*" on page 8.

Notes: See Tables 7 through 10 for notes regarding an enhanced methodology used to estimate registered vehicles and vehicle miles traveled for 2007 and after. Some States include restricted driver licenses and graduated driver licenses in their licensed driver counts. Due to an enhancement in the registration data provided by R.L. Polk & Co. for 2011 and later years, registration counts for those years changed considerably from the counts provided for 2010 and earlier years. This should be taken into account when comparing registration numbers and rates per registered vehicle for 2010 and earlier years with those for 2011 and later years. For more details, see "Changes from the *Traffic Safety Facts 2013 Report*" on page 8.

\*Injury data not available before 1988.

Notes: In 2011, the Federal Highway Administration implemented an enhanced methodology for estimating registered vehicles and vehicle miles traveled by vehicle type. These revisions were applied to data from 2007 and later. In some cases the changes were significant and should be taken into account when comparing registered vehicle counts and/or vehicle miles traveled for 2006 and earlier years with the numbers for 2007 and later years. Due to an enhancement in the passenger vehicle registration data provided by R.L. Polk & Co. for 2011 and later, registration counts for those years changed considerably from the counts provided for 2010 and earlier years. This should be taken into account when comparing registration numbers and rates per registered vehicle for passenger cars for 2010 and earlier years with those for 2011 and later years. For more details, see "Changes from the *Traffic Safety Facts 2013 Report*" on page 8.

\*Injury data not available before 1988.

Note: In 2011, the Federal Highway Administration implemented an enhanced methodology for estimating registered vehicles and vehicle miles traveled by vehicle type. These revisions were applied to data from 2007 and later years. In some cases the changes were significant and should be taken into account when comparing registered vehicle counts and/or vehicle miles traveled for 2006 and earlier years with the numbers for 2007 and later years.

2014	153 (1)	53	375 (3)	36	397 (3)	41

\*Highest blood alcohol concentration (BAC) among drivers or motorcycle riders involved in the crash was .08 grams per deciliter (g/dL) or greater. NHTSA estimates alcohol involvement when alcohol test results are unknown. For more information, see page 7 of this report.

\*\*The number of whole days in the holiday period is shown in parentheses. The length of the holiday period depends on the day on which the legal holiday falls, as follows:

- If the holiday falls on *Monday*, the holiday period is from 6:00 pm Friday to 5:59 am Tuesday.
- If the holiday falls on *Tuesday*, the holiday period is from 6:00 pm Friday to 5:59 am Wednesday.
- If the holiday falls on *Wednesday*, the holiday period is from 6:00 pm Tuesday to 5:59 am Thursday.
- If the holiday falls on *Thursday*, the holiday period is from 6:00 pm Wednesday to 5:59 am Monday.
- If the holiday falls on *Friday*, the holiday period is from 6:00 pm Thursday to 5:59 am Monday.
- Number of days and number of hours incorporated: 1 day (36 hours), 2 days (60 hours), 3 days (84 hours), 4 days (108 hours).

\*\*\*No data available.

\*Total includes occupants of other and unknown light trucks.

Chapter 2

# CRASHES

## CHAPTER 2 ■ CRASHES

This chapter presents statistics about police-reported motor vehicle crashes according to the most severe injury in the crash: **Fatal**, **Nonfatal Injury** (Injury), and **Property Damage**. The tables and figures are presented in four groups: Time, Location, Circumstances, and Alcohol. Below are some of the crash statistics you will find in this section:

- More than 6 million police-reported motor vehicle crashes occurred in the United States in 2014. Twenty-seven percent of those crashes (1.65 million) resulted in an injury, and fewer than 1 percent (29,989) resulted in a death.
- Midnight to 3 a.m. on Sundays and 9 p.m. to midnight on Fridays proved to be the deadliest 3-hour periods throughout 2014, with 902 and 879 fatal crashes, respectively.
- Sixty percent of fatal crashes involved only one vehicle, as compared with 30 percent of injury crashes and 29 percent of property-damage-only crashes.
- Collision with another motor vehicle in transport was the most common first harmful event for fatal, injury, and property-damage-only crashes. Collisions with fixed objects and noncollisions accounted for only 17 percent of all crashes, but they accounted for 43 percent of fatal crashes.
- Thirty percent of all fatal crashes involved alcohol-impaired driving, where the highest blood alcohol concentration (BAC) among drivers involved in the crash was .08 grams per deciliter (g/dL) or higher. For fatal crashes occurring from midnight to 3 a.m., 61 percent involved alcohol-impaired driving.

## Chapter 2 ■ Crashes

**Table 24**  
**Crashes and Crash Rates by Month and Crash Severity**

Month	Crash Severity						Total Crashes	
	Fatal		Injury		Property Damage Only			
	Number	Rate*	Number	Rate*	Number	Rate*	Number	Rate*
January	2,162	0.95	130,000	57	450,000	199	582,000	257
February	1,891	0.88	122,000	57	365,000	170	489,000	227
March	2,240	0.89	127,000	51	366,000	145	495,000	197
April	2,305	0.89	132,000	51	317,000	123	451,000	175
May	2,591	0.97	141,000	53	340,000	127	484,000	180
June	2,583	0.98	135,000	51	323,000	122	460,000	174
July	2,691	0.99	129,000	47	329,000	121	461,000	169
August	2,795	1.03	147,000	54	325,000	120	475,000	175
September	2,614	1.05	147,000	59	341,000	137	491,000	197
October	2,825	1.06	155,000	58	403,000	151	561,000	210
November	2,702	1.11	133,000	55	430,000	177	566,000	233
December	2,590	1.02	149,000	59	397,000	156	548,000	216
Total	29,989	0.99	1,648,000	54	4,387,000	145	6,064,000	200

\*Crashes per 100 million vehicle miles traveled.

\*Highest blood alcohol concentration (BAC) among drivers or motorcycle riders involved in the crash was .08 grams per deciliter (g/dL) or greater.

Chapter 3

# VEHICLES

## CHAPTER 3 ■ VEHICLES

Statistics about the vehicles involved in police-reported motor vehicle crashes are presented in this chapter, according to six major vehicle types: Passenger Cars, Light Trucks (including pickups, vans, and utility vehicles with a gross vehicle weight rating of 10,000 pounds or less), Large Trucks (including single-unit trucks and truck tractors with a gross vehicle weight rating of more than 10,000 pounds), Motorcycles (including motorcycles, mopeds, and motorscooters), Buses (including school buses and transit buses), and Other Vehicles (including all-terrain vehicles, farm and construction equipment, and motorhomes). The tables and figures are presented for all vehicle types first, then by individual vehicle type. Below are some of the vehicle statistics you will find in this section:

- Ninety-four percent of the 10.8 million vehicles involved in motor vehicle crashes in 2014 were passenger cars or light trucks.
- Large trucks accounted for 8 percent of the vehicles in fatal crashes, but only 3 percent of the vehicles involved in injury crashes and 5 percent of the vehicles involved in property-damage-only crashes. Of the 3,744 large trucks involved in fatal crashes, 73 percent were combination trucks.
- The proportion of vehicles that rolled over in fatal crashes (18.9 percent) was more than 4 times as high as the proportion in injury crashes (4.3 percent) and more than 17 times as high as the proportion in property-damage-only crashes (1.1 percent).
- Compared with passenger cars, pickup trucks, vans, large trucks, and buses, utility vehicles experienced the highest rollover rate in fatal crashes (28.0 percent). Large trucks experienced the highest rollover rate in injury crashes (7.4 percent) and in property-damage-only crashes (1.9 percent).
- Fires occurred in 0.1 percent of the vehicles involved in all traffic crashes in 2014. For fatal crashes, however, fires occurred in 3.3 percent of the vehicles involved.
- Regardless of crash severity, the majority of vehicles in single- and two-vehicle crashes were going straight prior to the crash. The next most common vehicle maneuver differed by crash severity: negotiating a curve for fatal crashes, turning left for injury crashes, and stopped in traffic lane for property-damage-only crashes.
- Motorcycles in fatal crashes had the highest proportion of collisions with fixed objects (25.3 percent), and buses in fatal crashes had the lowest proportion (2.6 percent).

## Chapter 3 ■ Vehicles

**Table 32**

**Vehicles Involved in Crashes by Relation to Junction, Traffic Control Device, and Crash Severity**

Chapter 4

# PEOPLE

## CHAPTER 4 ■ PEOPLE

This chapter presents statistics about the Drivers, Passengers, Pedestrians, and Pedalcyclists involved in police-reported motor vehicle crashes in 2014. The tables and figures are presented in nine groups: all killed or injured persons, crash-involved drivers, occupants (drivers and passengers), alcohol, restraints, motorcycle related, school bus related, pedestrians, and pedalcyclists. Below are some of the statistics you will find in this section:

- A total of 32,675 people lost their lives in motor vehicle crashes in 2014. Another 2.34 million people were injured.
- The majority of persons killed or injured in traffic crashes were drivers (65 percent), followed by passengers (25 percent), motorcyclists (4 percent), pedestrians (3 percent), and pedalcyclists (2 percent).
- Per 100,000 population, persons 21 to 24 years old had the highest fatality rate and the highest injury rate. Children under 5 and children 5 to 9 years old had the lowest fatality rate, and children under 5 years old had the lowest injury rate per 100,000 population.
- For every age group, the fatality rate per 100,000 population was lower for females than for males. The injury rate based on population was higher for females than for males in every age group, except for people 5 to 9 years old and people over 74 years old.
- Of the persons who were killed in traffic crashes in 2014, 31 percent died in alcohol-impaired driving crashes.

## Chapter 4 ■ People

Figure 22

Driver Involvement Rates per 100,000 Licensed Drivers, by Age, Sex, and Crash Severity

**Table 63**

**Drivers and Motorcycle Riders Involved in Fatal Crashes,  
by Previous Driving Record and License Type Compliance**

Previous Convictions	Valid License (37,199)		Invalid License (6,220)		Total (43,419)	
	Number	Percent	Number	Percent	Number	Percent
Previous Recorded Crashes	4,383	11.8	639	10.3	<b>5,022</b>	<b>11.6</b>
Previous Recorded Suspensions or Revocations	3,318	8.9	2,782	44.7	<b>6,100</b>	<b>14.0</b>
Previous DWI Convictions	531	1.4	542	8.7	<b>1,073</b>	<b>2.5</b>
Previous Speeding Convictions	5,784	15.5	952	15.3	<b>6,736</b>	<b>15.5</b>
Previous Other Harmful Moving Convictions	5,526	14.9	1,352	21.7	<b>6,878</b>	<b>15.8</b>
Drivers with No Previous Convictions	23,940	64.4	2,838	45.6	<b>26,778</b>	<b>61.7</b>

Notes: Table does not include 1,164 drivers with unknown license status. FARS records prior driving records (convictions only, not violations) for events occurring within 3 years of the date of the crash. The same driver can have one or more of these convictions. License type compliance refers to the type of drivers license possessed or not possessed by the driver for the class of vehicle being driven at the time of the crash.

**Table 64**

**Related Factors for Drivers and Motorcycle Riders Involved in Fatal Crashes**

Factors	Number	Percent
Driving too fast for conditions or in excess of posted speed limit . . . . .	8,360	18.8
Under the influence of alcohol, drugs or medication . . . . .	5,492	12.3
Failure to keep in proper lane or running off road . . . . .	3,770	8.5
Failure to yield right of way . . . . .	3,094	6.9
Distracted (phone, talking, eating, object, etc. . . . .	3,000	6.7
Operating vehicle in a careless manner . . . . .	2,122	4.8
Overcorrecting/oversteering . . . . .	1,814	4.1
Failure to obey traffic signs, signals, or officer . . . . .	1,796	4.0
Operating vehicle in erratic, reckless, or negligent manner . . . . .	1,548	3.5
Swerving or avoiding due to wind, slippery surface, vehicle, object, nonmotorist in roadway, etc.. .	1,510	3.4
Drowsy, asleep, fatigued, ill, or blackout . . . . .	1,309	2.9
Vision obscured (rain, snow, glare, lights, building, trees, etc.) . . . . .	1,241	2.8
Driving wrong way on one-way trafficway or on wrong side of road . . . . .	879	2.0
Making improper turn . . . . .	765	1.7
Other factors . . . . .	5,212	11.7
None reported . . . . .	13,885	31.1
Unknown . . . . .	5,740	12.9
<b>Total Drivers . . . . .</b>	<b>44,583</b>	<b>100.0</b>

Notes: The sum of the numbers and percentages is greater than total drivers as more than one factor may be present for the same driver.

Asleep or fatigued . . . . .	1	0.1
Improper passing . . . . .	1	0.1
Passing with insufficient distance . . . . .	1	0.1
Portable electronics . . . . .	1	0.1
Other factors . . . . .	30	4.1
None reported . . . . .	140	19.3
Unknown . . . . .	169	23.3
<b>Total Pedalcyclists . . . . .</b>	<b>726</b>	<b>100.0</b>

Notes: The sum of the numbers and percentages is greater than total pedalcyclists killed as more than one factor may be present for the same pedalcyclist.

# Chapter 5

# STATES

## CHAPTER 5 ■ STATES

Fatal crash and fatality statistics for each of the 50 States, the District of Columbia, and Puerto Rico are presented in this chapter. Several tables display State fatality rates based on population, licensed drivers, and registered vehicles. The last three tables describe each State's occupant restraint laws, motorcycle helmet laws, and driver's blood alcohol concentration laws. Below are some of the State statistics you will find in this chapter:

- Traffic fatalities decreased by nearly 1 percent from 2013 to 2014 for the Nation as a whole. Twenty-nine States and Puerto Rico showed decreases, ranging from less than 1 percent to as much as 36 percent.
- The pedestrian fatality rate per 100,000 population was 1.53 for the Nation. New Mexico had the highest rate (3.55), and Minnesota had the lowest rate (0.27).
- About 2.2 percent of all traffic crash fatalities in 2014 were pedalcyclists. Rhode Island and Vermont reported no pedalcyclists killed.
- In 2014, all 50 States, the District of Columbia, and Puerto Rico had seat belt use laws. All 50 States, the District of Columbia, and Puerto Rico also had laws requiring children of certain ages to be restrained in child safety seats.
- Motorcycle helmets were required for all riders in 19 States, the District of Columbia, and Puerto Rico in 2014. Twenty-eight States had helmet requirements with exceptions (age, rider type, roadway type), and three States (Illinois, Iowa, and New Hampshire) did not require helmets at all.
- In 2014, it was a criminal offense to operate a motor vehicle at a blood alcohol concentration (BAC) of .08 g/dL or above in all 50 States, the District of Columbia, and Puerto Rico.

# Chapter 5 ■ States

## Restraint Use and Motorcycle Helmet Use Laws

### Restraint Use Laws

The first mandatory belt use law was enacted in the State of New York in 1984. Adult belt use laws are now in effect in 49 States, the District of Columbia, and Puerto Rico. The laws differ from State to State, according to the type and age of the vehicle, occupant age and seating position, etc. The goal of these laws is to promote belt use and thereby reduce deaths and injuries in motor vehicle crashes.

In 2014, 33 States, the District of Columbia, and Puerto Rico had primary seat belt laws in effect, enabling law enforcement officers to stop vehicles and write citations when they observed violations of the seat belt law. In 16 States, the laws specified secondary enforcement, meaning that law enforcement officers were permitted to write citations only after a vehicle was stopped for some other traffic infraction. New Hampshire is the only State without a seat belt law for adults, although it does have a primary child passenger safety law that covers all drivers and passengers under the age of 18.

The first mandatory child restraint use law was implemented in the State of Tennessee in 1978. Since 1985, all 50 States and the District of Columbia have had child restraint use laws in effect. Child restraint use laws differ from State to State, in terms of the ages of children covered and in other important ways, including height and weight limits, seating position requirements, and various exemptions and exceptions.

The most current information on seat belt laws and child passenger safety laws is available on the Web site of the Governors Highway Safety Association (GHSA) at [www.ghsa.org](http://www.ghsa.org):

- Seat belt laws-[www.ghsa.org/html/stateinfo/laws/seatbelt\\_laws.html](http://www.ghsa.org/html/stateinfo/laws/seatbelt_laws.html)
- Child passenger safety laws-[www.ghsa.org/html/stateinfo/laws/childsafety\\_laws.html](http://www.ghsa.org/html/stateinfo/laws/childsafety_laws.html)

In 2014, seat belt use rates in the United States ranged from 68.9 percent in South Dakota to 97.8 percent in Oregon. Nineteen States and the District of Columbia achieved belt use rates of 90 percent or higher. These results are from probability-based observational surveys conducted by 50 States, the District of Columbia, and U.S. Territories. The nationwide seat belt use rate in 2014 was 87 percent, as measured by NHTSA's National Occupant Protection Use Survey (NOPUS). NOPUS is a national probability-based survey, which is independent from State belt use surveys. Observed seat belt use rates for the States and the Nation in 2014 can be found in *Seat Belt Use in 2014—Use Rates in the States and Territories*, DOT HS 812 149, [www-nrd.nhtsa.dot.gov/Pubs/812149.pdf](http://www-nrd.nhtsa.dot.gov/Pubs/812149.pdf).

### Motorcycle Helmet Use Laws

In 2014, 19 States, the District of Columbia, and Puerto Rico required helmet use by all motorcyclists. In 28 States, helmet use was required for only a subset of motorcyclists (typically, motorcyclists under age 18), and 3 States (Illinois, Iowa, and New Hampshire) did not require helmet use for motorcyclists of any age. The most current information on helmet use laws is available on the GHSA Web site at [www.ghsa.org/html/stateinfo/laws/helmet\\_laws.html](http://www.ghsa.org/html/stateinfo/laws/helmet_laws.html).

According to results from NOPUS, the overall rate of DOT-compliant motorcycle helmet use in the United States was 64 percent in 2014. Helmet use continued to be significantly higher in States that required all motorcyclists to be helmeted than in other States. Information on motorcycle helmet use in 2014 can be found in *Motorcycle Helmet Use in 2014—Overall Results*, DOT HS 812 110, [www-nrd.nhtsa.dot.gov/Pubs/812110.pdf](http://www-nrd.nhtsa.dot.gov/Pubs/812110.pdf).

## 2014 Fatality Analysis Reporting System Data Elements

### Crash Level

---

Arrival Time EMS	Number of Forms Submitted
Atmospheric Conditions	for Persons Not in Motor Vehicles
City	Number of Motor Vehicle Occupant Forms
County	Submitted
Crash Date	Number of Vehicle Forms Submitted
Crash Events	Rail Grade Crossing Identifier
Crash Time	Related Factors—Crash Level
EMS Time at Hospital	Relation to Junction
First Harmful Event	Roadway Function Class
Global Position	Route Signing
Light Condition	School Bus Related
Manner of Collision	Special Jurisdiction
Milepoint	State
National Highway System	Trafficway Identifier
Notification Time EMS	Work Zone

### Vehicle Level

---

Areas of Impact	Pre-Impact Stability
Attempted Avoidance Maneuver	Registered Vehicle Owner
Body Type	Registration State
Bus Use	Related Factors—Vehicle Level
Cargo Body Type	Roadway Alignment
Contributing Circumstance, Motor Vehicle	Roadway Grade
Crash Type	Roadway Surface Conditions
Critical Event—Precrash (Category)	Roadway Surface Type
Critical Event—Precrash (Event)	Rollover
Device Functioning	Sequence of Events
Emergency Use	Special Use
Extent of Damage	Speed Limit
Fire Occurrence	Total Lanes in Roadway
Gross Vehicle Weight Rating/ Gross Combination Weight Rating	Traffic Control Device
Hazardous Material Involvement/Placard	Trafficway Description
Hit-and-Run	Travel Speed
Jackknife	Underride/Override
Location of Rollover	Unit Type
Model Year	Vehicle Configuration
Most Harmful Event	Vehicle Identification Number
Motor Carrier Identification Number	Vehicle Make
Number of Occupants	Vehicle Model
Pre-Event Movement	Vehicle Number
(Prior to Recognition of Critical Event)	Vehicle Removal
Pre-Impact Location	Vehicle Trailing

## 2014 Fatality Analysis Reporting System Data Elements (Continued)

### Driver Level

Commercial Motor Vehicle License Status	Driver's Vision Obscured By
Compliance with Commercial Drivers License (CDL) Endorsements	Driver's Zip Code
Compliance with License Restrictions	License Compliance with Class of Vehicle
Condition (Impairment) at Time of Crash	Non-CDL License Type Status
Date of First Crash, Suspension, Conviction	Previous DWI Convictions
Date of Last Crash, Suspension, Conviction	Previous Other Harmful Motor Vehicle Convictions
Driver Distracted By	Previous Recorded Crashes
Driver Height	Previous Recorded Suspensions and Revocations
Driver Maneuvered to Avoid	Previous Speeding Convictions
Driver Presence	Related Factors – Driver Level
Driver Weight	Speed Related
Driver's License State	Vehicle Number
	Violations Charged

### Person (Motor Vehicle Occupant) Level

Age	Method of Alcohol Determination by Police
Air Bag Deployed	Method of Drug Determination by Police
Alcohol Test	Number
Any Indication of Misuse—Restraint System/ Helmet Use	Person Number
Death Date	Person Type
Death Time	Police-Reported Alcohol Involvement
Died at Scene/En Route	Police-Reported Drug Involvement
Drug Test	Race/Hispanic Origin
Ejection	Related Factors—Person (Motor Vehicle Occupant) Level
Ejection Path	Restraint System/Helmet Use
Extrication	Seating Position
Fatal Injury at Work	Sex
Injury Severity	Transported to Medical Facility By

### Person (Not Motor Vehicle Occupant) Level

Age	Nonmotorist Location at Time of Crash
Alcohol Test	Nonmotorist Safety Equipment
Condition (Impairment) at Time of Crash	Number of Motor Vehicle Striking Nonoccupant
Death Date	Pedestrian/Bike Typing
Death Time	Person Number
Died at Scene/En Route	Person Type
Drug Test	Police-Reported Alcohol Involvement
Fatal Injury at Work	Police-Reported Drug Involvement
Injury Severity	Race/Hispanic Origin
Method of Alcohol Determination by Police	Related Factors—Person (Not a Motor Vehicle Occupant) Level
Method of Drug Determination by Police	Transported to Medical Facility By
Nonmotorist Action/Circumstances at Time of Crash	
Nonmotorist Action/Circumstances Prior to Crash

# APPENDIX C ■ GES TECHNICAL NOTES

## Standard Errors

The national estimates produced from GES data may differ from the true values, because they are based on a probability sample of crashes and not a census of all crashes. The size of these differences may vary depending on which sample of crashes was selected. [For a complete description of the GES sampling design, see *National Accident Sampling System General Estimates System Technical Note* (DOT HS 807 796) available from NCSA.] The standard error of an estimate is a measure of the precision or reliability with which an estimate from this particular GES sample approximates the results of a census.

In a report of this size, it is impractical to provide standard errors for each estimate. Instead, generalized standard errors for estimates of totals are provided in the following table. Generalized errors were calculated separately for the crash, vehicle, and people characteristics. The values for the GES estimates and an estimate of one standard error are given in Table C1 on the following page. By adding and subtracting two standard errors, a 95 percent confidence interval can be created for the GES estimates in this report. For example, the estimated number of injury crashes that occurred in the month of May is given in Table 24 as 141,000. To calculate one standard error for this crash estimate, use Table C1. Since 141,000 does not appear in the Crash Estimate column of Table C1, use linear interpolation from the standard error values for 100,000 (8,700) and 200,000 (16,200). One standard error would be approximately 11,800. The 95 percent confidence interval for this estimate would be  $141,000 \pm 2 \times 11,800$  or 117,400 to 164,600.

## Appendix C ■ GES Technical Notes

**Table C1**  
**2014 GES Estimates and Standard Errors**

Crash Estimate (x)	Crash Standard Error (SE) *	Vehicle Estimate (x)	Vehicle Standard Error (SE) **	Person Estimate (x)	Person Standard Error (SE) ***
1,000	400	1,000	500	1,000	400
5,000	900	5,000	1,200	5,000	900

## Appendix C ■ GES Technical Notes

### Unknowns

GES data are obtained either directly from an item on the PAR or by interpreting the information provided in the report through reviewing the crash diagram, the Officer's written summary of the crash, or combinations of variables on the PAR. Because of this interpretation, and because the police officer may not have entered some item of information or provided complete information, data can be missing. Prior to 2010 data, two different statistical procedures were used on GES data to complete values for unknown data. These procedures, univariate and hotdeck imputation, are described in a technical report available from NCSA, *Imputation in the General Estimates System* (DOT HS 807 985). Imputation by sequential regression was instituted in 2010, using a software package called IVEware that was developed at the University of Michigan. In this method, covariates are selected automatically using stepwise regression. Because it can be done in an automated fashion, this method replaced both univariate and hotdeck imputation in 2010. The only exception was body type, which was imputed in a univariate method. Table C2 below gives the reader the proportions of unknown values prior to imputation for variables with imputed values that were used in this report.

**Table C2**  
**Percent of Unknowns for 2014 GES Data Elements**

Crash Level			
Atmospheric Condition . . . . .	1.4%	Light Condition . . . . .	0.7%
Crash Severity . . . . .	3.1%	Manner of Collision . . . . .	0.2%
Day of Week . . . . .	0.0%	Minute of Crash . . . . .	0.5%
First Harmful Event . . . . .	0.1%	Relation to Junction—Specific Location . . . . .	0.5%
Hour of Crash . . . . .	0.5%	Relation to Trafficway . . . . .	<0.1%
Vehicle/Driver Level			
Initial Point of Impact . . . . .	1.8%	Speed Limit* . . . . .	15.0%
Most Harmful Event . . . . .	0.1%	Traffic Control Device* . . . . .	2.9%
Roadway Surface Condition* . . . . .	1.0%	Vehicle Type . . . . .	1.7%
Person Level			
Age . . . . .	12.2%	Seating Position . . . . .	1.9%
Injury Severity . . . . .	4.7%	Sex . . . . .	5.1%

\*Roadway Surface Condition, Speed Limit, and Traffic Control Device elements were moved from the Crash level to the Vehicle level in 2010.

Note: For some data elements, counts for the GES category "Not Reported On" were combined with counts for "Unknown" in the frequencies above.

## Alcohol Involvement

NHTSA defines a fatal crash as alcohol-related or alcohol-involved if at least one driver or nonoccupant (such as a pedestrian or pedalcyclist) involved in the crash is determined to have had a Blood Alcohol Concentration (BAC) of .01 gram per deciliter (g/dL) or higher. Thus, any fatality that occurs in an alcohol-related crash is considered an alcohol-related fatality.

NHTSA defines a nonfatal crash as alcohol-related or alcohol-involved if police indicate on the police accident report that there is evidence of alcohol present. The code does not necessarily mean that a driver or nonoccupant was tested for alcohol.

The term “alcohol-related” or “alcohol-involved” does not indicate that a crash or fatality was caused by the presence of alcohol.

## Alcohol-Impaired Driving Crashes

Crashes that involve at least one driver or motorcycle rider (operator) with a BAC of .08 g/dL or higher. Thus, any crash involving a driver or motorcycle rider with a BAC of .08 g/dL or higher is considered to be an alcohol-impaired driving crash.

## Alcohol-Impaired Driving Fatalities

Fatalities in crashes that involve at least one driver or motorcycle rider (operator) with a BAC of .08 g/dL or higher. Thus, any fatality occurring in a crash involving a driver or motorcycle rider with a BAC of .08 g/dL or higher is considered to be an alcohol-impaired driving fatality.

## Blood Alcohol Concentration

The BAC is measured as a percentage by weight of alcohol in the blood (g/dL). A positive BAC level (.01 g/dL and higher) indicates that alcohol was consumed by the person tested; a BAC level of .08 g/dL or more indicates that the person was alcohol-impaired.

## Body Type

Detailed type of motor vehicle within a vehicle type.

## Bus

Any motor vehicle designed primarily to transport large groups of passengers (nine or more persons, including the driver). Includes school buses, inter-city buses, and transit buses.

## Combination Truck

A truck tractor not pulling a trailer; a tractor pulling at least one full or semi-trailer; or a single-unit truck pulling at least one trailer.

## Crash

An event that produces injury and/or property damage, involves a motor vehicle in transport, and occurs on a trafficway or while the vehicle is still in motion after running off the trafficway.

## Crash Severity

1. **Fatal Crash.** A police-reported crash involving a motor vehicle in transport on a trafficway in which at least one person dies within 30 days of the crash.
2. **Injury Crash.** A police-reported crash that involves a motor vehicle in transport on a trafficway in which no one died but at least one person was reported to have: (1) an incapacitating injury; (2) a visible but not incapacitating injury; (3) a possible, not visible injury; or (4) an injury of unknown severity.
3. **Property-Damage-Only Crash.** A police-reported crash involving a motor vehicle in transport on a trafficway in which no one involved in the crash suffered any injuries.

## Crash Type

Single-vehicle or multiple-vehicle crash.

## Day

From 6 a.m. to 5:59 p.m.

## Driver

An occupant of a vehicle who is in physical control of a motor vehicle in transport, or for an out-of-control vehicle, an occupant who was in control until control was lost.

## Ejection

Refers to occupants being totally or partially thrown from the vehicle as a result of an impact or rollover.

## First Harmful Event

The first event during a crash that caused injury or property damage.

# Glossary

## Fixed Object

Stationary structures or substantial vegetation attached to the terrain.

## Gross Vehicle Weight Rating (GVWR)

The maximum rated capacity of a vehicle, including the weight of the base vehicle, all added equipment, driver and passengers, and all cargo loaded into or on the vehicle. Actual weight may be less than or greater than GVWR.

## Initial Impact Point

The first impact point that produced personal injury or property damage, regardless of First or Most Harmful Event.

## Injury Severity

The police-reported injury severity of the person (i.e., occupant, pedestrian, or pedalcyclist).

1. Killed (Fatal)
2. Injured (Incapacitating injury, evident injury but not incapacitating, complaint of injury, or injured, severity unknown).
3. No injury.

## Jackknife

Jackknife can occur at any time during the crash sequence. In this report, jackknifing is restricted to truck tractors pulling a trailing unit in which the trailing unit and the pulling vehicle rotate with respect to each other.

## Junction

Area formed by the connection of two roadways, including intersections, interchange areas, and entrance/exit ramps.

## Land Use

The crash location (urban or rural).

## Large Trucks

Trucks over 10,000 pounds gross vehicle weight rating, including single unit trucks and truck tractors.

## Light Trucks

Trucks of 10,000 pounds gross vehicle weight rating or less, including pickups, vans, truck-based station wagons, and utility vehicles.

## Manner of Collision

A classification for crashes in which the first harmful event was a collision between two motor vehicles in transport and is described as one of the following:

**Angle.** Collisions which are not head-on, rear-end, rear-to-rear, or sideswipe.

**Head-on.** Refers to a collision where the front end of one vehicle collides with the front-end of another vehicle while the two vehicles are traveling in opposite directions.

**Rear-end.** A collision in which one vehicle collides with the rear of another vehicle.

**Sideswipe.** A collision in which the sides of both vehicles sustain minimal engagements.

## Most Harmful Event

The event during a crash for a particular vehicle that is judged to have produced the greatest personal injury or property damage.

## Motor Vehicle in Transport

A motor vehicle in motion on the trafficway or any other motor vehicle on the roadway, including stalled, disabled, or abandoned vehicles.

## Motorcycle

A two- or three-wheeled motor vehicle designed to transport one or two people, including motor-scooters, minibikes, and mopeds.

## Motorcycle Rider

The operator (driver) of a motorcycle.

## Motorcyclist

Any person riding on a motorcycle, including the motorcycle rider (operator) and any passenger (a person riding on, but not in control of, the motorcycle).

## Night

From 6 p.m. to 5:59 a.m.

## Noncollision

A class of crash in which the first harmful event does not involve a collision with a fixed object, nonfixed object, or a motor vehicle. This includes overturn, fire/explosion, falls from a vehicle, and injuries in a vehicle.

## Nonoccupant

Any person who is not an occupant of a motor vehicle in transport and includes the following:

1. Pedestrians
2. Pedalcyclists
3. Occupants of parked motor vehicles
4. Others such as joggers, skateboard riders, people riding on animals, and persons riding in animal-drawn conveyances.

## Nonoccupant Location

The location of nonoccupants at time of impact. Intersection locations are coded only if nonoccupants were struck in the area formed by a junction of two or more trafficways. Non-intersection location may include nonoccupants struck on a junction of a driveway/alley access and a named trafficway. Nonoccupants who are occupants of motor vehicles not in transport are coded with respect to the location of the vehicle.

## Objects Not Fixed

Objects that are movable or moving but are not motor vehicles. Includes pedestrians, pedalcyclists, animals, or trains (e.g., spilled cargo in roadway).

## Occupant

Any person who is in or upon a motor vehicle in transport. Includes the driver, passengers, and persons riding on the exterior of a motor vehicle.

## Other Vehicle

Consists of the following types of vehicles:

1. Large limousine (more than four side doors or stretched chassis)
2. Three-wheel automobile or automobile derivative
3. Van-based motorhome
4. Light-truck-based motorhome (chassis mounted)
5. Large-truck-based motorhome
6. ATV (all terrain vehicle, including dune/swamp buggy) and ATC (all terrain cycle)
7. Snowmobile
8. Farm equipment other than trucks
9. Construction equipment other than trucks (includes graders)
10. Other type vehicle (includes go-cart, fork lift, city streetsweeper).

## Passenger

Any occupant of a motor vehicle who is not a driver.

## Passenger Car

Motor vehicles used primarily for carrying passengers, including convertibles, sedans, and station wagons.

## Pedalcyclist

A person on a vehicle that is powered solely by pedals.

## Pedestrian

Any person not in or upon a motor vehicle or other vehicle.

## Restraint Use

The occupant's use of available vehicle restraints, including lap belt, shoulder belt, or automatic belt.

## Roadway

That part of a trafficway designed, improved, and ordinarily used for motor vehicle travel.

## Roadway Function Class

The classification describing the character of service the street or highway is intended to provide. Includes the following:

**Interstates.** Limited access divided facilities of at least four lanes designated by the Federal Highway Administration as part of the Interstate System.

**Other Freeways and Expressways.** All urban principal arterial with limited control of access not on the Interstate system.

**Other Principal Arterials.** Major streets or highways, many with multi-lane or freeway design, serving high-volume traffic corridor movements that connect major generators of travel.

**Minor Arterials.** Streets and highways linking cities and larger towns in rural areas in distributing trips to small geographic areas in urban areas (not penetrating identifiable neighborhoods).

**Collectors.** In rural areas, routes serving intra-county, rather than State-wide travel. In urban areas, streets providing direct access to neighborhoods as well as direct access to arterials.

**Local Streets and Roads.** Streets whose primary purpose is feeding higher order systems, providing direct access with little or no through traffic.

# Glossary

## **Rollover**

Rollover is defined as any vehicle rotation of 90 degrees or more about any true longitudinal or lateral axis. Includes rollovers occurring as a first harmful event or subsequent event.

## **Seating Position**

The location of the occupants in the vehicle. More than one can be assigned the same seat position; however, this is allowed only when a person is sitting on someone's lap.

## **School Bus Related Crash**

Any crash in which a vehicle, regardless of body design, used as a school bus is directly or indirectly involved, such as a crash involving school children alighting from a vehicle.

## **Single-Unit Truck**

A medium or heavy truck in which the engine, cab, drive train, and cargo area are all on one chassis.

## **Trafficway**

Any road, street, or highway open to the public as a matter of right or custom for moving persons or property from one place to another.

## **Vehicle**

See *Motor Vehicle in Transport*.

## **Vehicle Type**

A series of motor vehicle body types that have been grouped together because of their design similarities. The principal vehicle types used in this report are passenger car, light truck, large truck, motorcycle, bus, and other vehicle. See the definition of each of the vehicle types elsewhere in this glossary.

## **Weekday**

From 6 a.m. Monday to 5:59 p.m. Friday.

## **Weekend**

From 6 p.m. Friday to 5:59 a.m. Monday.

\*Estimated reductions in deaths that resulted from the presence of laws establishing a minimum legal age of 21 years for the consumption of alcoholic beverages.

The table above presents estimates of the lives saved in 2014 and previous years by various protective devices or laws. The estimates were obtained by combining information from fatal traffic crashes with estimates of the effectiveness of each device or law in saving lives. For seat belts and motorcycle helmets, the table also estimates the numbers of additional lives that could have been saved if the devices had been used by more people.
