

Traffic Safety Facts

2014 Data

July 2016

DOT HS 812 301

Key Findings

- Of the 32,675 motor vehicle traffic fatalities in 2014 there were 16,710 (51%) that occurred in rural areas, 15,487 (47%) that occurred in urban areas, and 478 (1%) that occurred in unknown areas.
- According to the 2014 American Community Survey from the U.S. Census Bureau an estimated 19 percent of the U.S. population lived in rural areas. However, rural fatalities accounted for 51 percent of all traffic fatalities in 2014.
- Rural traffic fatalities decreased by 34 percent from 24,587 in 2005 to 16,710 in 2014. Urban traffic fatalities decreased by 17 percent from 18,627 in 2005 to 15,487 in 2014.
- In 2014, the fatality rate per 100 million vehicle miles traveled was 2.4 times higher in rural areas than in urban areas (1.81 and 0.74, respectively).
- Of the 16,710 rural traffic fatalities in 2014, there were 4,906 people (29%) killed in speeding-related crashes. Of the 15,487 urban traffic fatalities in 2014, there were 4,283 people (28%) killed in speeding-related crashes.
- Rural alcohol-impaired-driving fatalities decreased by 34 percent from 7,721 in 2005 to 5,134 in 2014. Urban alcohol-impaired-driving fatalities decreased by 19 percent from 5,791 in 2005 to 4,701 in 2014.
- The 2014 National Occupant Protection Use Survey (NOPUS) observed that the seat belt use rate among front seat passenger vehicle occupants in urban areas was 86 percent, and rural occupants were observed to have a use rate of 83 percent.
- Based on known restraint use in 2014 fatal crashes, 51 percent of rural passenger vehicle occupants killed were unrestrained as compared to 45 percent of urban passenger vehicle occupants killed.

Rural/Urban Comparison

For the purpose of this fact sheet, rural and urban boundaries are determined by the State highway departments and approved by the Federal Highway Administration. The State highway departments use the U.S. Census Bureau's rural and urban boundaries.¹

In this 2014 fact sheet, the rural and urban information is presented as follows:

- Overview
- Time of Day
- Speeding
- Alcohol
- Restraint Use
- Rollover Crashes
- Driver Characteristics
- Nonoccupants
- Fatalities by State

Overview

In 2014:

- There were 29,989 fatal motor vehicle traffic crashes resulting in 32,675 fatalities.
- Of these 29,989 fatal traffic crashes, there were 15,031 (50%) that occurred in rural areas, 14,509 (48%) that occurred in urban areas, and 449 (1%) that occurred in unknown areas.
- Of these 32,675 traffic fatalities, there were 16,710 (51%) that occurred in rural areas, 15,487 (47%) that occurred in urban areas, and 478 (1%) that occurred in unknown areas.
- According to the 2014 American Community Survey from the U.S. Census Bureau, an estimated 19 percent of the U.S. population lived in rural areas. However, rural fatalities accounted for 51 percent of all traffic fatalities in 2014.

Figure 1 presents the motor vehicle traffic fatality trends in the most recent 10-year period for which data is available by location (rural and urban):

- Rural fatalities decreased by 34 percent from 24,587 in 2005 to 16,710 in 2014.
- Urban fatalities decreased by 17 percent from 18,627 in 2005 to 15,487 in 2014. However, urban fatalities in 2014 is the highest since 2008.

¹ See the U.S. Census Bureau link to define urban and rural areas: www.census.gov/geo/reference/ua/urban-rural-2010.html

Figure 1
Motor Vehicle Traffic Fatalities, by Year and Location, 2005–2014

Source: Fatality Analysis Reporting System (FARS) 2005–2013 Final File, 2014 Annual Report File (ARF)

Figure 2 presents the fatality rates per 100 million vehicle miles traveled (VMT) by location (rural, urban, and overall) in the most recent 10-year period for which data is available:

- The fatality rate in rural areas decreased by 24 percent from 2.38 in 2005 to 1.81 in 2014.
- The fatality rate in urban areas decreased by 22 percent from 0.95 in 2005 to 0.74 in 2014.
- In 2014, the fatality rate was 2.4 times higher in rural areas than in urban areas (1.81 and 0.74, respectively).

Figure 2
Fatality Rates per 100 Million Vehicle Miles Traveled, by Year and Location, 2005–2014

Sources: FARS 2005-2013 Final File, 2014 ARF; VMT – Federal Highway Administration

Time of Day

Of the 15,031 rural fatal crashes in 2014, there were 7,982 (53%) that occurred during the day (6 a.m. to 5:59 p.m.) and 6,891 (46%) that occurred during the night (6 p.m. to 5:59 a.m.). Of the 14,509 urban fatal crashes in 2014, there were 6,300 (43%) that occurred during the day and 8,148 (56%) that occurred during the night. In short, more rural fatal crashes occurred during the day and more urban fatal crashes occurred during the night.

Speeding

The National Highway Traffic Safety Administration considers a crash to be speeding-related if the driver was charged with a speeding-related offense or if an officer indicated that racing, driving too fast for conditions, or exceeding the posted speed limit was a contributing factor in the crash.

In 2014:

- Of the 32,675 traffic fatalities, there were 9,262 (28%) who were killed in speeding-related crashes.

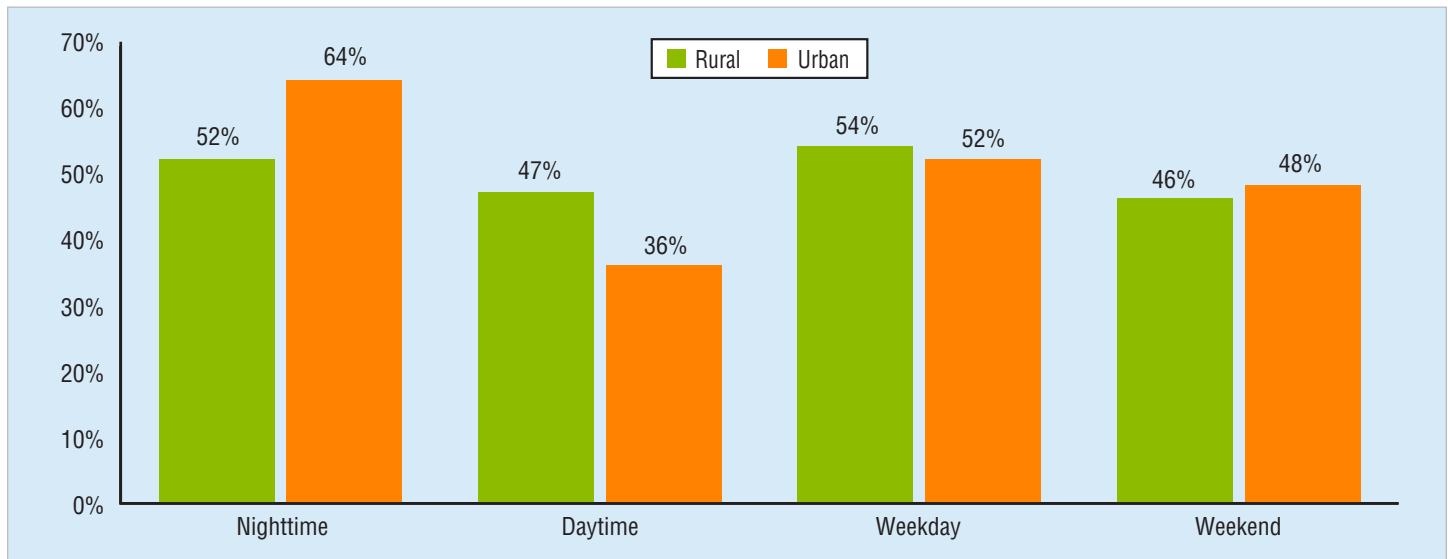

- Of the 16,710 rural traffic fatalities, there were 4,906 (29%) who were killed in speeding-related crashes.
- Of the 15,487 urban traffic fatalities, there were 4,283 (28%) who were killed in speeding-related crashes.

Figure 3 shows the rural and urban percentages of speeding-related fatalities in traffic crashes in 2014 by time of day (nighttime – 6 p.m. to 5:59 a.m./daytime – 6 a.m. to 5:59 p.m.) and day of week (weekday – Monday 6 a.m. to Friday 5:59 p.m./weekend – Friday 6 p.m. to Monday 5:59 a.m.):

- Over half (52%) of rural area speeding-related fatalities occurred at night and 46 percent occurred over the weekend.
- Nearly two-thirds (64%) of urban area speeding-related fatalities occurred at night and 48 percent occurred over the weekend.

Figure 3

Rural and Urban Percentages of Speeding-Related Fatalities in Traffic Crashes, by Time of Day and Day of Week, 2014

Source: FARS 2014 ARF

Note: Nighttime – 6 p.m. to 5:59 a.m.; daytime – 6 a.m. to 5:59 p.m.; weekday – Monday 6 a.m. to Friday 5:59 p.m.; weekend – Friday 6 p.m. to Monday 5:59 a.m.

In 2014, 65 percent of drivers involved in urban fatal crashes were on roadways where the posted speed limits were 50 miles per hour (mph) or less. In rural fatal crashes, 71 percent of drivers involved were on roadways where the posted speed limit was 55 mph or higher.

Alcohol

Drivers are considered to be alcohol-impaired when their blood alcohol concentrations (BACs) are .08 grams per deciliter (g/dL) or higher. Thus, any fatality occurring in a crash involving a driver with a BAC of .08 or higher is considered to be an alcohol-impaired-driving fatality.

Table 1 presents the number and percentage of traffic fatalities by location (rural/urban) and the highest driver BAC in the crash if one or more drivers were alcohol-impaired.

- In 2014, the proportions of alcohol-impaired driving fatalities were similar between rural and urban areas (31% and 30%, respectively).

- Of the 9,967 alcohol-impaired-driving fatalities in 2014, there were 5,134 (52%) that occurred in rural areas and 4,701 (47%) that occurred in urban areas.
- Alcohol-impaired-driving fatalities decreased by 27 percent from 13,582 in 2005 to 9,967 in 2014.
 - Rural alcohol-impaired-driving fatalities decreased by 34 percent from 7,721 in 2005 to 5,134 in 2014.
 - Urban alcohol-impaired-driving fatalities decreased by 19 percent from 5,791 in 2005 to 4,701 in 2014.

Table 1
Traffic Fatalities, by Location and the Highest Driver* BAC in the Crash, 2005 and 2014

Location	2005			2014		
	Total Fatalities	Alcohol-Impaired-Driving Fatalities BAC=.08+		Total Fatalities	Alcohol-Impaired-Driving Fatalities BAC=.08+	
		Number	Percent		Number	Percent
Rural	24,587	7,721	31%	16,710	5,134	31%
Urban	18,627	5,791	31%	15,487	4,701	30%
Total**	43,510	13,582	31%	32,675	9,967	31%

Source: FARS 2005 Final File, 2014 ARF

*Includes motorcycle riders.

**Includes fatalities where location was unknown.

Of the 44,583 drivers involved in fatal traffic crashes in 2014, there were 9,417 (21%) who were alcohol-impaired. Of these alcohol-impaired drivers, there were 4,778 (51%) who were driving in rural areas at the time of the crash and 4,519 (48%) who were driving in urban areas.

The highest percentages of alcohol-impaired drivers involved in fatal crashes among all age groups in 2014 were drivers 21 to 24 years old (30%), followed by drivers 25 to 34 years old (29%) and 35 to 44 years old (24%). Rural and urban alcohol-impaired drivers followed this trend with 21- to 24-year-olds (31% and 30%, respectively),

followed by 25-to 34-year-olds (30% and 28%, respectively) and 35-to 44-year-olds (26% and 22%, respectively).

In cases where drivers involved in fatal crashes in 2014 had one or more previous convictions for driving while intoxicated (DWI), 58 percent of rural drivers were alcohol-impaired and 51 percent of urban drivers were alcohol-impaired.

As shown in Figure 4, the most frequently recorded BAC among drinking drivers involved in fatal crashes in rural areas was .19 g/dL. For urban areas, it was .14 g/dL.

Figure 4
Distribution of Blood Alcohol Concentration (BAC) of Drivers Involved in Fatal Crashes, by Location, 2014

Source: FARS 2014 ARF

Restraint Use

The 2014 NOPUS observed that the seat belt use rate among front seat passenger vehicle (defined as passenger cars and light trucks) occupants in urban areas was 86 percent, and rural occupants were observed to have a use rate of 83 percent (see NHTSA Research Note Seat Belt Use in 2014 – Overall Results, Report No. DOT HS 812 113).

Of the 21,022 passenger vehicle occupants killed in 2014, there were 12,444 (59%) who were killed in rural areas and 8,332 (40%) who were killed in urban areas.

Figure 5 presents the 2014 rural and urban percentages (based on known restraint use) of unrestrained passenger vehicle occupant fatalities by vehicle type (passenger cars and light trucks including pickup trucks, SUVs, and vans). In 2014 (based on known restraint use):

- Fifty-one percent of rural passenger vehicle occupants killed were unrestrained as compared to 45 percent of urban passenger vehicle occupants killed.
- Nearly two-thirds (62%) of rural pickup truck occupants killed were unrestrained – the highest percentage of any passenger vehicle occupants killed among both rural and urban areas.

Figure 5
Rural and Urban Percentages of Unrestrained* Passenger Vehicle Occupant Fatalities, by Vehicle Type, 2014

Source: FARS 2014 ARF

*Based on known restraint use.

Rollover Crashes

Of the 12,444 rural passenger vehicle occupants killed in 2014, there were 4,729 (38%) who were in vehicles that rolled over; of the 8,332 urban passenger vehicles occupants killed, there were 2,063 (25%) who were in vehicles that rolled over. Data further shows that 68 percent of rural and 63 percent of urban passenger vehicle occupants killed were unrestrained in rollover vehicles (based on known restraint use).

In 2014, SUVs involved in rural fatal crashes experienced the highest rollover percentage at 39 percent. Other rural rollover percentages were 32 percent for pickup trucks, 20 percent for passenger cars, 21 percent for vans, and 17 percent for large trucks. In urban areas, vehicles experienced lower rollover percentages: 18 percent for SUVs, 15 percent for pickup trucks, 9 percent for vans, 9 percent for passenger cars, and 9 percent for large trucks.

Driver Characteristics

In 2014, rural drivers involved in fatal crashes were found to have a higher percentage of valid driver's licenses than urban drivers (87% and 83%, respectively).

There were 20,765 drivers killed in motor vehicle traffic crashes in 2014. Sixty-three percent of rural drivers died at the scenes of the crashes, compared to 35 percent of urban drivers. Data also shows that 40 percent of all drivers killed were transported to hospitals and 3 percent of these drivers died en route. Rural drivers represented 63 percent of drivers who died en route to hospitals compared to 38 percent for urban drivers.

Nonoccupants

Nonoccupants are defined as pedestrians, pedalcyclists, or other nonoccupants. In 2014:

- Of the 4,884 pedestrians killed in motor vehicle traffic crashes, 1,073 (22%) were rural pedestrians, 3,703 (76%) were urban pedestrians, and 108 (2%) were unknowns.
- Of the 726 pedalcyclists killed in motor vehicle traffic crashes, 202 (28%) were rural pedalcyclists, 494 (68%) were urban pedalcyclists, and 30 (4%) were unknowns.

Fatalities by State

For each State and the District of Columbia in 2014, Table 2 presents the number and percentage of rural and urban traffic fatalities. Puerto Rico is included in this table, but not included in the overall U.S. total. In 2014, the total number of unknowns was unusually higher compared to previous years because of two States: Florida (362) and Delaware (54).

This fact sheet contains information on motor vehicle fatalities and fatal crashes, based on data from the Fatality Analysis Reporting System (FARS). FARS is a census of fatal crashes within the 50 States, the District of Columbia, and Puerto Rico (although Puerto Rico is not included in U.S. totals).
