Traffic Safety Facts 2022

A Compilation of Motor Vehicle Traffic Crash Data

U.S. Department of Transportation
National Highway Traffic Safety Administration

NHTSA

2022 National Statistics

Police-Reported Motor Vehicle Traffic Crashes

Fatal	39,221
Injury	1,664,598
Property-Damage-Only	4,226,677
Total	**5,930,496**

Traffic Crash Victims	Killed	Injured
Occupants	**27,344**	**2,169,123**
Drivers	20,908	1,620,915
Passengers	6,393	547,538
Unknown	43	670
Motorcyclists	**6,218**	**82,687**
Nonoccupants	**8,952**	**130,961**
Pedestrians	7,522	67,336
Pedalcyclists	1,105	46,195
Other/Unknown	325	17,430
Total	**42,514**	**2,382,771**

Other National Statistics

Vehicle Miles Traveled	3,196,191,000,000
Population	333,287,557
Registered Vehicles	303,528,576
Licensed Drivers	235,086,153
Economic Cost of Traffic Crashes (2019) (Estimate for Reported and Unreported Crashes)	$340 billion

National Rates: Fatalities

Fatalities per 100 Million Vehicle Miles Traveled	1.33
Fatalities per 100,000 Population	12.76
Fatalities per 100,000 Registered Vehicles	14.01
Fatalities per 100,000 Licensed Drivers	18.08

National Rates: People Injured

People Injured per 100 Million Vehicle Miles Traveled	75
People Injured per 100,000 Population	715
People Injured per 100,000 Registered Vehicles	785
People Injured per 100,000 Licensed Drivers	1,014

Traffic Safety Facts 2022

A Compilation of Motor Vehicle Traffic Crash Data

National Highway Traffic Safety Administration
National Center for Statistics and Analysis
Washington, DC 20590

Suggested APA Format Citation:

National Center for Statistics and Analysis. (2024, December). *Traffic safety facts 2022: A compilation of motor vehicle traffic crash data* (Report No. DOT HS 813 656). National Highway Traffic Safety Administration.

For More Information:

Motor vehicle traffic crash data are available from the National Center for Statistics and Analysis (NCSA), NSA-230. NCSA can be contacted at NCSARequests@dot.gov or 800-934-8517. NCSA programs can be found at www.nhtsa.gov/data. Additional data tools, such as the State Traffic Safety Information (STSI), Fatality and Injury Reporting System Tool (FIRST), fact sheet data visualizations, and more can be found at https://cdan.dot.gov/. To report a vehicle safety-related problem or to inquire about safety information, contact the Vehicle Safety Hotline at 888-327-4236 or www.nhtsa.gov/report-a-safety-problem.

Fact sheets available from NCSA are Alcohol-Impaired Driving, Bicyclists and Other Cyclists, Children, Large Trucks, Motorcycles, Occupant Protection in Passenger Vehicles, Older Population, Passenger Vehicles, Pedestrians, Race and Ethnicity, Rural/Urban Traffic Fatalities, School-Transportation-Related Traffic Crashes, Speeding, State Alcohol-Impaired-Driving Estimates, State Traffic Data, Summary of Motor Vehicle Traffic Crashes, and Young Drivers. The fact sheets and annual Traffic Safety Facts reports can be found at https://crashstats.nhtsa.dot.gov/.

Glossary

alcohol involvement

NHTSA defines a fatal crash as alcohol-related or alcohol-involved if at least one driver or nonoccupant (such as a pedestrian or pedalcyclist) involved in the crash is determined to have had a blood alcohol concentration (BAC) of .01 grams per deciliter (g/dL) or higher. Thus, any fatality that occurs in an alcohol-related crash is considered an alcohol-related fatality.

NHTSA defines a nonfatal crash as alcohol-related or alcohol-involved if police indicate on the police crash report that there is evidence of alcohol present. The code does not necessarily mean that a driver or nonoccupant was tested for alcohol.

The terms "alcohol-related" and "alcohol-involved" do not indicate that a crash or fatality was caused by the presence of alcohol.

alcohol-impaired-driving crashes

Crashes that involve at least one driver or motorcycle rider (operator) with a BAC of .08 g/dL or higher. Thus, any crash involving a driver or motorcycle rider with a BAC of .08 g/dL or higher is considered an alcohol-impaired-driving crash.

alcohol-impaired-driving fatalities

Fatalities in crashes that involve at least one driver or motorcycle rider (operator) with a BAC of .08 g/dL or higher. Thus, any fatality occurring in a crash involving a driver or motorcycle rider with a BAC of .08 g/dL or higher is considered an alcohol-impaired-driving fatality.

blood alcohol concentration

BAC is measured as the weight of alcohol in a volume of blood (g/dL). A positive BAC level (.01 g/dL or higher) indicates that alcohol was consumed by the person tested; a BAC level of .08 g/dL or more indicates that the person was alcohol-impaired.

body type

Detailed type of motor vehicle within a vehicle type.

bus

Any motor vehicle designed primarily to transport large groups of nine or more people, including the driver. Includes school buses, inter-city buses, and transit buses.

combination truck

A truck tractor not pulling a trailer; a tractor pulling at least one full- or semi-trailer; or a single-unit truck pulling at least one trailer.

crash

An event that produces injury and/or property damage, involves a motor vehicle in-transport, and occurs on a trafficway or while the vehicle is still in motion after running off the trafficway.

crash severity

1. ***fatal crash***. A police-reported crash involving a motor vehicle in-transport on a trafficway in which at least one person dies within 30 days of the crash.
2. ***injury crash***. A police-reported crash that involves a motor vehicle in-transport on a trafficway in which no one died but at least one person was reported to have: (1) an incapacitating injury; (2) a visible but not incapacitating injury; (3) a possible, not visible injury; or (4) an injury of unknown severity.
3. ***property-damage-only crash***. A police-reported crash involving a motor vehicle in-transport on a trafficway in which no one involved in the crash suffered any injuries.

crash type

Single-vehicle or multi-vehicle crash.

day

From 6 a.m. to 5:59 p.m.

driver

An occupant of a vehicle who is in physical control of a motor vehicle in-transport, or for an out-of-control vehicle, an occupant who was in control until control was lost.

ejection

Refers to an occupant being totally or partially thrown from the vehicle because of an impact or rollover.

First Harmful Event

The first event during a crash that caused injury or property damage.

fixed object

Stationary structures or substantial vegetation attached to the terrain.

gross vehicle weight rating

The GVWR is the maximum rated capacity of a vehicle, including the weight of the base vehicle, all added equipment, driver and passengers, and all cargo loaded into or on the vehicle. Actual weight may be less than or greater than GVWR.

impact point

The first impact point that produced personal injury or property damage, regardless of First or Most Harmful Event.

injury severity

The police-reported injury severity of the person (occupant, pedestrian, or pedalcyclist).

1. Killed (Fatal)
2. Injured (Incapacitating injury, evident injury but not incapacitating, complaint of injury, or injured, severity unknown)
3. No injury

jackknife

Jackknife can occur at any time during the crash sequence. In this report, jackknifing is restricted to a truck tractor pulling a trailing unit in which the trailing unit and the pulling vehicle rotate with respect to each other.

junction

Area formed by the connection of two roadways, including intersections, interchange areas, and entrance/exit ramps.

land use

The crash location (urban or rural).

large trucks

Trucks over 10,000 pounds GVWR, including single-unit trucks and truck tractors.

light trucks

Trucks of 10,000 pounds GWVR or less, including pickups, vans, truck-based station wagons, and SUVs.

manner of collision

A classification for crashes in which the First Harmful Event was a collision between two motor vehicles in-transport and is described as one of the following:

angle. Collisions that are not head-on, rear-end, rear-to-rear, or sideswipe.

head-on. A collision where the front of one vehicle collides with the front of another vehicle while the two are traveling in opposite directions.

rear-end. A collision in which one vehicle collides with the rear of another vehicle.

sideswipe. A collision in which the sides of both vehicles sustain minimal engagements.

Most Harmful Event

The event during a crash for a particular vehicle that is judged to have produced the greatest personal injury or property damage.

motor vehicle in-transport

A motor vehicle in motion on the trafficway or any other motor vehicle on the roadway, including stalled, disabled, or abandoned vehicles.

motorcycle

A 2- or 3-wheeled motor vehicle designed to transport one or two people, including motor-scooters, minibikes, and mopeds.

motorcycle rider

The operator (driver) of a motorcycle.

motorcyclist

Any person riding on a motorcycle, including the motorcycle rider (operator) and any passenger (a person riding on, but not in control of, the motorcycle).

night

From 6 p.m. to 5:59 a.m.

noncollision

A class of crash in which the First Harmful Event does not involve a collision with a fixed object, nonfixed object, or a motor vehicle. This includes overturn, fire/explosion, fall from a vehicle, and injuries in a vehicle.

nonoccupant

Any person who is not an occupant of a motor vehicle in-transport and includes the following.

1. Pedestrians
2. Pedalcyclists
3. Occupants of parked motor vehicles
4. Others such as joggers, skateboard riders, people riding on animals, and people riding in animal-drawn conveyances

nonoccupant location

The location of nonoccupants at time of impact. Intersection locations are coded only if nonoccupants were struck in the area formed by a junction of two or more trafficways. Non-intersection location may include nonoccupants struck on a junction of a driveway/alley access and a named trafficway. Nonoccupants who are occupants of motor vehicles not in-transport are coded with respect to the location of the vehicle.

objects not fixed

Objects that are movable or moving but are not motor vehicles. Includes pedestrians, pedal-cyclists, animals, or trains (e.g., spilled cargo in roadway).

occupant

Any person who is in or on a motor vehicle in-transport. Includes the driver, passengers, and any person riding on the exterior of a motor vehicle.

other vehicle

Consists of the following types of vehicles.

1. Large limousine (more than 4 side doors or stretched chassis)
2. 3-wheel automobile or automobile derivative
3. Van-based motorhome
4. Light-truck-based motorhome (chassis-mounted)
5. Large-truck-based motorhome
6. ATV (all-terrain vehicle, including dune/swamp buggy) and ATC (all-terrain cycle)
7. Snowmobile
8. Farm equipment other than trucks
9. Construction equipment other than trucks (includes graders)
10. Other type vehicle (includes go-cart, forklift, city streetsweeper).

passenger

Any occupant of a motor vehicle who is not a driver.

passenger car

Motor vehicles used primarily for carrying passengers, including convertibles, sedans, and station wagons.

pedalcyclist

A person on a vehicle powered solely by pedals. Starting in 2022, pedalcyclists also include a person on a vehicle powered by a combination of pedals and motors.

pedestrian

Any person not in or upon a motor vehicle or other vehicle.

restraint use

The occupant's use of available vehicle restraints, including lap belt, shoulder belt, or automatic belt.

roadway

That part of a trafficway designed, improved, and ordinarily used for motor vehicle travel.

roadway function class

The classification describing the character of service the street or highway is intended to provide. Includes the following:

interstates. Limited access divided facilities of at least four lanes designated by the FHWA as part of the Interstate System.

other freeways and expressways. All urban principal arterials with limited control of access not on the Interstate System.

other principal arterials. Major streets or highways, many with multi-lane or freeway design, serving high-volume traffic corridor movements that connect major generators of travel.

minor arterials. Streets and highways linking cities and larger towns in rural areas in distributing trips to small geographic areas in urban areas (not penetrating identifiable neighborhoods).

collectors. In rural areas, routes serving intra-county, rather than statewide travel. In urban areas streets providing direct access to neighborhoods as well as direct access to arterials.

local streets and roads. Streets whose primary purpose is feeding higher order systems, providing direct access with little or no through traffic.

rollover

Any vehicle rotation of 90° or more about any true longitudinal or lateral axis. Includes rollovers occurring as a First Harmful Event or subsequent event.

seating position

The location of the occupants in the vehicle. More than one can be assigned the same seat position; however, this is allowed only when a person is sitting on someone's lap.

school-bus-related crash

Any crash in which a vehicle, regardless of body design, used as a school bus is directly or indirectly involved, such as a crash involving school children alighting from a vehicle.

single-unit truck

A medium or heavy truck in which the engine, cab, drive train, and cargo area are all on one chassis.

trafficway

Any road, street, or highway open to the public as a matter of right or custom for moving people or property from one place to another.

vehicle

See *motor vehicle in-transport*.

vehicle identification number

VIN is a unique combination of 17 alphanumeric characters assigned to a specific motor vehicle designated by the manufacturer.

vehicle miles traveled

VMT is a measurement of the total distance traveled by vehicles on a specific segment of roadway within a specific time frame. Annual VMT is calculated by multiplying the estimated mean traffic volume (Annual Average Daily Traffic) for a roadway segment by the roadway segment length in miles and the number of days in the year.

vehicle type

A series of motor vehicle body types that have been grouped together because of their design similarities. The principal vehicle types used in this report are passenger car, light truck, large truck, motorcycle, bus, and other vehicle. See the definition of each of the vehicle types in this glossary.

vPIC

The NHTSA Product Information Catalog and Vehicle Listing (vPIC) is a consolidated platform that presents data collected within the manufacturer reported data from 49 CFR Parts 512 – 595 for use in a variety of modern tools. NHTSA's vPIC platform is intended to serve as a centralized source for basic VIN decoding, Manufacturer Information Database (MID), Manufacturer Equipment Plant Identification and associated data.

weekday

From 6 a.m. Monday to 5:59 p.m. Friday.

weekend

From 6 p.m. Friday to 5:59 a.m. Monday.

Introduction

In this annual report, *Traffic Safety Facts 2022: A Compilation of Motor Vehicle Traffic Crash Data*, the National Highway Traffic Safety Administration presents descriptive statistics about traffic crashes of all severities, from those that result in property damage to those that result in the loss of human life.

Information from three of NHTSA's primary data systems has been combined to create a single source for motor vehicle traffic crash statistics. The first data system, the Fatality Analysis Reporting System (FARS), is probably the better known of the three sources. Established in 1975, FARS contains data on the most severe traffic crashes, those in which someone was killed. The second source is the National Automotive Sampling System General Estimates System (NASS GES), which began operation in 1988 and ended in 2015. NASS GES contains data from a nationally representative sample of police-reported crashes of all severities, including those that resulted in death, injury, or property damage. The third source is the Crash Report Sampling System (CRSS), which replaced NASS GES in 2016. CRSS is the redesigned nationally representative sample of police-reported traffic crashes.

FARS, GES, and CRSS were designed and developed by NHTSA's National Center for Statistics and Analysis (NCSA) to provide an overall measure of highway safety, to help identify traffic safety problems, to suggest solutions, and to help provide an objective basis on which to evaluate the effectiveness of motor vehicle safety standards and highway safety initiatives. Data from these systems is used to answer requests for information from the international and national highway traffic safety communities, including State and local governments, Congress, Federal agencies, research organizations, industry, the media, and the public.

FARS Operations

The Fatality Analysis Reporting System (FARS) became operational in 1975 and contains data on a census of fatal motor vehicle traffic crashes in the 50 States, the District of Columbia, and Puerto Rico. To be included in FARS, a traffic crash must involve a motor vehicle traveling on a trafficway customarily open to the public and must result in the death of an occupant of a vehicle or a nonoccupant within 30 days of the crash.

NHTSA has a cooperative agreement with an agency in each State's government to provide information on all qualifying fatal traffic crashes in the State. These agreements are managed by the NCSA State Data System, Office of Data Acquisition. Trained State employees, called FARS analysts, are responsible for gathering, translating, and transmitting their State's data to NCSA's standard format. The number of analysts varies by State, depending on the number of fatal crashes and the ease of obtaining data.

FARS data are obtained solely from the States' existing documents.

- Police Crash Reports (PCRs)
- State Vehicle Registration Files
- State Driver Licensing Files
- State Highway Department Data
- Vital Statistics
- Death Certificates
- Coroner/Medical Examiner Reports
- Emergency Medical Service Reports
- Other State Records

From these documents FARS analysts code more than 140 FARS data elements. The specific data elements may be modified slightly each year to conform to changing user needs, vehicle characteristics, and highway safety emphasis areas. The data collected in FARS does not include any personal identifying information such as names, addresses, or social security numbers. Thus, any data kept in FARS files and made available to the public fully conforms to the Privacy Act.

Each FARS analyst enters data into a local microcomputer data file, and daily updates are sent to NHTSA's central computer database. Data are automatically checked when entered for acceptable range values and for consistency, enabling the analyst to make corrections immediately. Several programs continually monitor and improve the completeness and accuracy of the data. The 2022 FARS data file used for the statistics in this report was created in February 2024; however, the 2022 FARS file will officially close later in 2024. This additional time provides the opportunity for submission of important variable data requiring outside sources, which may lead to changes in the final counts. The updated final counts for 2021 are reflected in this report. The updated final counts for 2022 will be reflected in the 2023 annual report.

GES Operations

Data from the National Automotive Sampling System (NASS) General Estimates System (GES) was obtained from a nationally representative probability sample selected from all police-reported crashes. The NASS GES began operation in 1988 and ended in 2015. For a crash to be eligible for the GES sample, a PCR must be completed for the crash, and the crash must involve at least one motor vehicle traveling on a trafficway and must result in property damage, injury, or death. Although various sources suggest that about half the motor vehicle crashes in the country are not reported to police, most of these unreported crashes involve only minor property damage and no significant personal injury. By restricting attention to police-reported crashes, the GES concentrated on those crashes of greatest concern to the highway safety community and the public.

GES data collectors made weekly visits to 410 police jurisdictions in 60 sites across the United States, where they randomly sampled about 55,000 PCRs per year. The collectors obtained copies of the PCRs and sent them to the NASS quality control centers for coding. No other data was collected beyond the selected PCRs—no driver license, vehicle registration, or medical information was obtained.

Trained data entry personnel interpreted and coded data directly from the PCRs into an electronic data file. Approximately 90 data elements were coded into a common format. Some elements were modified every other year to meet the changing needs of the highway safety community. To protect individual privacy, no personal information (names, addresses, specific crash locations) was coded. During data coding, the data was checked electronically for validity and consistency. After the data file was created, further quality checks were performed on the data through computer processing and by the data coding supervisors.

CRSS Operations

NHTSA developed and implemented the NASS in the 1970s to make estimates of the motor vehicle crash experience in the United States. In 1988 NHTSA split the NASS into two surveys, the GES and the Crashworthiness Data System (CDS). Since then, the same data collection sites have been used for GES data collection. Given the shifts in population and the vehicle fleet, and the changing analytic needs of the safety community, Congress authorized NHTSA to modernize its crash data collection system. NCSA redesigned the nationally representative sample of police-reported traffic crashes in the United States. The new system, the Crash Report Sampling System (CRSS), replaced NASS GES in 2016.

The CRSS was designed independent of other NHTSA surveys. The target population for the CRSS is the same as that for the NASS GES: all police-reported motor vehicle crashes on trafficways. The CRSS obtains its data from a nationally representative probability sample selected from the more than 7 million police-reported crashes that occur annually. For a crash to be eligible for the CRSS sample, a crash report must be completed by the police; it must involve at least one motor vehicle traveling on a trafficway; and the crash must result in property damage, injury, or death.

These crash reports are chosen from 60 selected sites across the United States that reflect the geography, population, miles driven, and crashes in the United States. CRSS data collectors review crash reports from hundreds of law enforcement agencies within the sites, systematically sampling tens of thousands of PCRs each year. The collectors obtain copies of the selected PCRs and send them to a central location for coding. No other data are collected beyond that in the selected crash reports.

Trained personnel interpret and code data directly from the PCRs into an electronic data file. Approximately 120 data elements are coded into a common format. After coding, quality checks are performed on the data to ensure validity and consistency. When these are completed, CRSS data files and coding documentation become publicly available.

About This Report

Fatal traffic crash data from FARS and nonfatal crash data from GES and CRSS are presented in this report in five chapters. Chapter 1, "Trends," presents data from all years of FARS (1975 to 2022), GES (1988 to 2015), and CRSS (2016 to 2022). The remaining chapters present data only from 2022. Chapter 2, "Crashes," describes general characteristics of crashes, such as when and how often they occurred, where they occurred, and what happened during the crashes. Chapter 3, "Vehicles," concentrates on the types of vehicles involved in crashes and the damage to the vehicles. Chapter 4, "People," is the largest chapter of this report, with statistics about drivers, passengers, pedestrians, and pedalcyclists. The last chapter, "States," contains information about crashes for each State, the District of Columbia, and Puerto Rico. Terms used throughout the report are defined in the Glossary.

Statistics describing fatal crashes or fatalities have been derived from FARS. Statistics describing injury or property-damage-only crashes have been derived from GES (or CRSS) and statistics describing nonfatal injuries have been derived from both FARS and GES (or CRSS). The reader should be aware that FARS numbers are actual counts of fatalities or fatal crashes, whereas GES and CRSS numbers are estimates of counts of crashes and people injured and are subject to sampling and non-sampling errors. (See Appendix C for more information on these errors.) **The 2016 and later year estimates from CRSS are not comparable to 2015 and earlier year estimates from NASS GES because of different sampling designs.** For more information on CRSS, refer to *Crash Report Sampling System: Sample Design and Weighting* (Zhang, Noh, et al., 2019a) or *Crash Report Sampling System: Design Overview, Analytic Guidance, and FAQs* (Zhang, Subramanian, et al., 2019b).

The reader may also notice that many tables have rows or footnotes for "unknowns" for FARS data, but not for GES or CRSS data. The reason for this difference is that almost all the GES or CRSS unknown data have been assigned values through complex statistical procedures. FARS unknown data, on the other hand, are not assigned values, with the exception of BAC test results. When the alcohol test results are unknown, BAC values in g/dL have been assigned to drivers and nonoccupants involved in fatal crashes, using a method of multiple imputation revised in 2001. More information on the multiple imputation method, including detailed tabulations of alcohol involvement in various categories (age, sex, time of day, etc.), is available in a NHTSA technical report, *Multiple Imputation of Missing Blood Alcohol Concentration (BAC) Values in FARS* (Rubin et al., 1998).

Changes From the *Traffic Safety Facts 2021* Report

Product Information Catalog and Vehicle Listing (vPIC) Vehicle Classification

Historically, vehicle type classifications (e.g., passenger cars, light trucks, large trucks, motorcycles, buses) from FARS, NASS GES, and CRSS used for analysis and data reporting were based on analyst-coded vehicle body type. NHTSA did not have manufacturer authoritative data to assist in vehicle body type coding. NCSA has developed a vPIC dataset that is being used to decode Vehicle Identification Numbers (VINs) and extract vehicle information. Details of vehicles (make, model, body class, etc.) involved in crashes are obtained from vPIC via VIN-linkage. The VIN-derived information from vPIC uses the manufacturer's classification of body class, which allows for more accurate vehicle type analysis.

The vPIC-based analysis data are available beginning with 2020 FARS and CRSS data files. Vehicle-related analysis for 2020 and later years are based on vPIC vehicle classification. As a result, the 2020 and later-year vehicle type classifications are not comparable to 2019 and earlier-year vehicle type

classifications. This change affects any analysis with a vehicle component to it. More information on vPIC can be found at https://vpic.nhtsa.dot.gov/ (NHTSA, n.d.).

Vehicle Type Revisions

The 2021 data definitions for vehicle type classifications were reviewed resulting in revisions. The revised vehicle type data definitions were applied to 2020 and later data. The motorcycle category was most effected, as some qualifying body classes were not previously included in this category, but instead were classified as "Other" vehicle type. Consequently, motorcycles were previously underreported.

2020 Imputed Alcohol Data Updates

Blood alcohol concentration test results are not reported for many drivers and nonoccupants involved in fatal traffic crashes. BAC can be missing due to several reasons, the most frequent being that drivers and nonoccupants are not always tested for alcohol. To address the missing data issue, NHTSA uses a statistical model, multiple imputation, to estimate the missing BAC of these people. This statistical model is based on important characteristics of the crash including the type of vehicle driven. Though the 2020 FARS file was already final, due to the "Vehicle Type Revisions," the 2020 imputed alcohol files were regenerated. Consequently, there were minor changes to alcohol-related estimates for 2020 shown in the 2021 annual report. For example, Table 13 titled "People Killed, by Highest Driver BAC in the Crash, 1982-2021" showed 11,718 alcohol-impaired-driving fatalities in 2020. The updated estimate for alcohol-impaired-driving-fatalities in 2020 is 11,727.

Important Change for Motorized Bicycles

Prior to 2022, motorized bicycles were collected as motor vehicles and classified as motorcycles in FARS and CRSS, and their operators and passengers were captured as motorists. Beginning in 2022, FARS and CRSS are no longer collecting motorized bicycles as motor vehicles. Consequently, operators and passengers of motorized bicycles will be captured as pedalcyclists when involved in a motor vehicle traffic crash. Any traffic crash involving only motorized bicycle(s) will no longer be captured in FARS or CRSS.

Registered Vehicles and VMT by Vehicle Type

Vehicle registration data for passenger vehicles (passenger cars and light trucks) was obtained from R. L. Polk's National Vehicle Population Profile (NVPP), which is a compilation of all passenger vehicles that have been registered in compliance with State requirements (Polk data from S&P Global Mobility, Copyright © R.L. Polk & Co.). Subsequently, overall registrations and passenger car and light-truck VMT were revised by NHTSA, using a combination of Polk and FHWA exposure data.

Polk enhanced the data quality of its NVPP, resulting in a complete rewrite of the data due to (1) enhanced business rules for vehicles on the road, (2) more consistent reporting/processing across States, and (3) upgraded basis for vehicle coding. A comparison of Polk's "old" NVPP and "new" NVPP for 2011 shows that the enhancements resulted in an increase of more than 3 percent in NHTSA's passenger vehicle registration counts, consisting of a 5.6-percent decrease in the 2011 passenger car count and a 14.6-percent increase in the 2011 light-truck count from the old NVPP to the new NVPP, as shown in the table below. Consequently, the data in this report for vehicle registrations and VMT from 2011 to 2022 is not strictly comparable with the data for all prior years, which was based on Polk's old NVPP.

About This Report

Starting with 2020 data, passenger car and light-truck registrations were revised by NHTSA's NCSA to align with vPIC, which is manufacturer-based data. Prior year data were revised to align with NHTSA's NCSA body type, which is analyst-based data. Several vehicles previously classified as passenger cars are now classified as light trucks, with the vast majority as SUVs. Thus, 2020 and later year passenger car and light-truck registration counts are not comparable to prior year data.

Registered Vehicles: NCSA Revised Using Polk and FHWA Data

Year	Passenger Cars (Polk)	Light Trucks (Polk)	Motorcycles (FHWA)	Buses (FHWA)	Large Trucks (FHWA)	NCSA Revised Total
2009 (Old NVPP)	137,203,972	102,008,600	7,929,724	841,993	10,973,214	258,957,503
2010 (Old NVPP)	135,310,480	102,376,147	8,009,503	846,051	10,770,054	257,312,235
2011 (Old NVPP)	134,543,655	103,594,529	8,437,502	666,064	10,270,693	257,512,443
2011 (New NVPP)	126,966,714	118,702,389	8,437,502	666,064	10,270,693	265,043,362
2012 (New NVPP)	127,077,676	118,690,690	8,454,939	764,509	10,659,380	265,647,194
2013 (New NVPP)	128,936,225	120,491,485	8,404,687	864,549	10,597,356	269,294,302
2014 (New NVPP)	131,138,925	123,470,278	8,417,718	872,027	10,905,956	274,804,904
2015 (New NVPP)	133,218,366	127,401,053	8,600,936	888,907	11,203,184	281,312,446
2016 (New NVPP)	134,827,696	132,052,102	8,679,380	976,161	11,498,561	288,033,900
2017 (New NVPP)	132,864,363	135,594,973	8,664,108	983,231	12,229,216	290,335,891
2018 (New NVPP)	132,837,515	141,312,896	8,659,741	992,152	13,233,910	297,036,214
2019 (New NVPP)	129,838,156	146,751,968	8,596,314	995,033	13,085,643	299,267,114
2020 (New NVPP)	110,612,958	164,230,764	8,347,435	1,010,304	12,899,372	297,100,833
2021 (New NVPP)	107,934,093	170,108,546	9,795,491	939,123	13,856,404	302,633,657
2022 (New NVPP)	104,645,629	174,027,343	9,567,664	954,119	14,333,821	303,528,576

VMT: Polk and FHWA

Year	Passenger Cars (Revised FHWA Using Polk)	Light Trucks (Revised FHWA Using Polk)	Motorcycles (FHWA)	Buses (FHWA)	Large Trucks (FHWA)	Total (FHWA)
2009 (Old NVPP)	1,510,339	1,122,909	20,822	14,387	288,306	2,956,764
2010 (Old NVPP)	1,507,716	1,140,740	18,513	13,770	286,527	2,967,266
2011 (Old NVPP)	1,497,460	1,152,998	18,542	13,807	267,594	2,950,402
2011 (New NVPP)	1,369,810	1,280,648	18,542	13,807	267,594	2,945,194
2012 (New NVPP)	1,377,486	1,286,574	21,385	14,781	269,207	2,963,497
2013 (New NVPP)	1,384,194	1,293,536	20,366	15,167	275,017	2,982,941
2014 (New NVPP)	1,396,098	1,314,458	19,970	15,999	279,132	3,020,377
2015 (New NVPP)	1,420,869	1,358,824	19,606	16,230	279,844	3,089,841
2016 (New NVPP)	1,439,678	1,410,040	20,445	16,350	287,895	3,173,815
2017 (New NVPP)	1,424,056	1,453,322	20,149	17,227	297,593	3,210,248
2018 (New NVPP)	1,403,760	1,493,323	20,076	18,303	304,864	3,240,327
2019 (New NVPP)	1,372,622	1,551,431	19,688	17,980	300,050	3,261,772
2020 (New NVPP)	1,035,519	1,537,469	17,947	15,037	297,649	2,903,622
2021 (New NVPP)	1,074,905	1,694,094	19,642	16,744	327,026	3,132,411
2022 (New NVPP)	1,059,950	1,762,714	23,765	18,490	331,272	3,196,191

Notes: NCSA revises FHWA's passenger car and light-truck VMT using Polk's registration counts. Starting with 2020 data, passenger car and light-truck revisions were based on vPIC vehicle classifications. As a result, the 2020 and later year passenger car and light-truck counts are not comparable to 2019 and earlier years.

Data Availability

While this report presents a wide spectrum of information in more than 100 tables and figures, it contains only a fraction of the data available from FARS, NASS GES, and CRSS. Additional data from FARS (1975 to 2022), NASS GES (1988 to 2015), and CRSS (2016 to 2022) are available in several ways, including the following.

- Traffic Safety Facts Annual Report Tables can be obtained from the online portal at https://cdan.dot.gov/tsftables/tsfar.htm, which contains the most current data available, unlike the Traffic Safety Facts Annual Report publication. The 2021 and earlier year FARS data are final. Although the 2022 data file is a full year's worth of data, it is subject to change when it is finalized. Tables in this report can be rendered using the latest FARS and NASS GES (or CRSS) data available.
- FARS data can also be accessed at www-fars.nhtsa.dot.gov/Main/index.aspx. This website provides instant access to the 1994 to 2022 FARS data via reports, which is an inventory of the fatality statistical reports found in this publication. These are national reports for current and past years that may be customized by selection of State, and for State reports, county tabulation may be selected.
- Data visualization tools for Traffic Safety fact sheets can be found at https://cdan.dot.gov/Data-Visualization/DataVisualization.htm.
- FARS and GES/CRSS data can be queried using the Fatality and Injury Reporting System Tool (FIRST) at https://cdan.dot.gov/query.
- FARS, NASS GES, and CRSS data can be obtained by downloading published files from www.nhtsa.gov/file-downloads?p=nhtsa/downloads/FARS/ (FARS), www.nhtsa.gov/file-downloads?p=nhtsa/downloads/GES/ (NASS GES), or www.nhtsa.gov/file-downloads?p=nhtsa/downloads/CRSS/ (CRSS). The files are available in Statistical Analysis System (SAS) or comma separated values (CSV) file formats. This will enable you to process the data using your own computer system.
- Modest requests for specific data will be answered by NCSA at no charge. Response usually requires about two weeks, depending on the nature and complexity of the data requested.

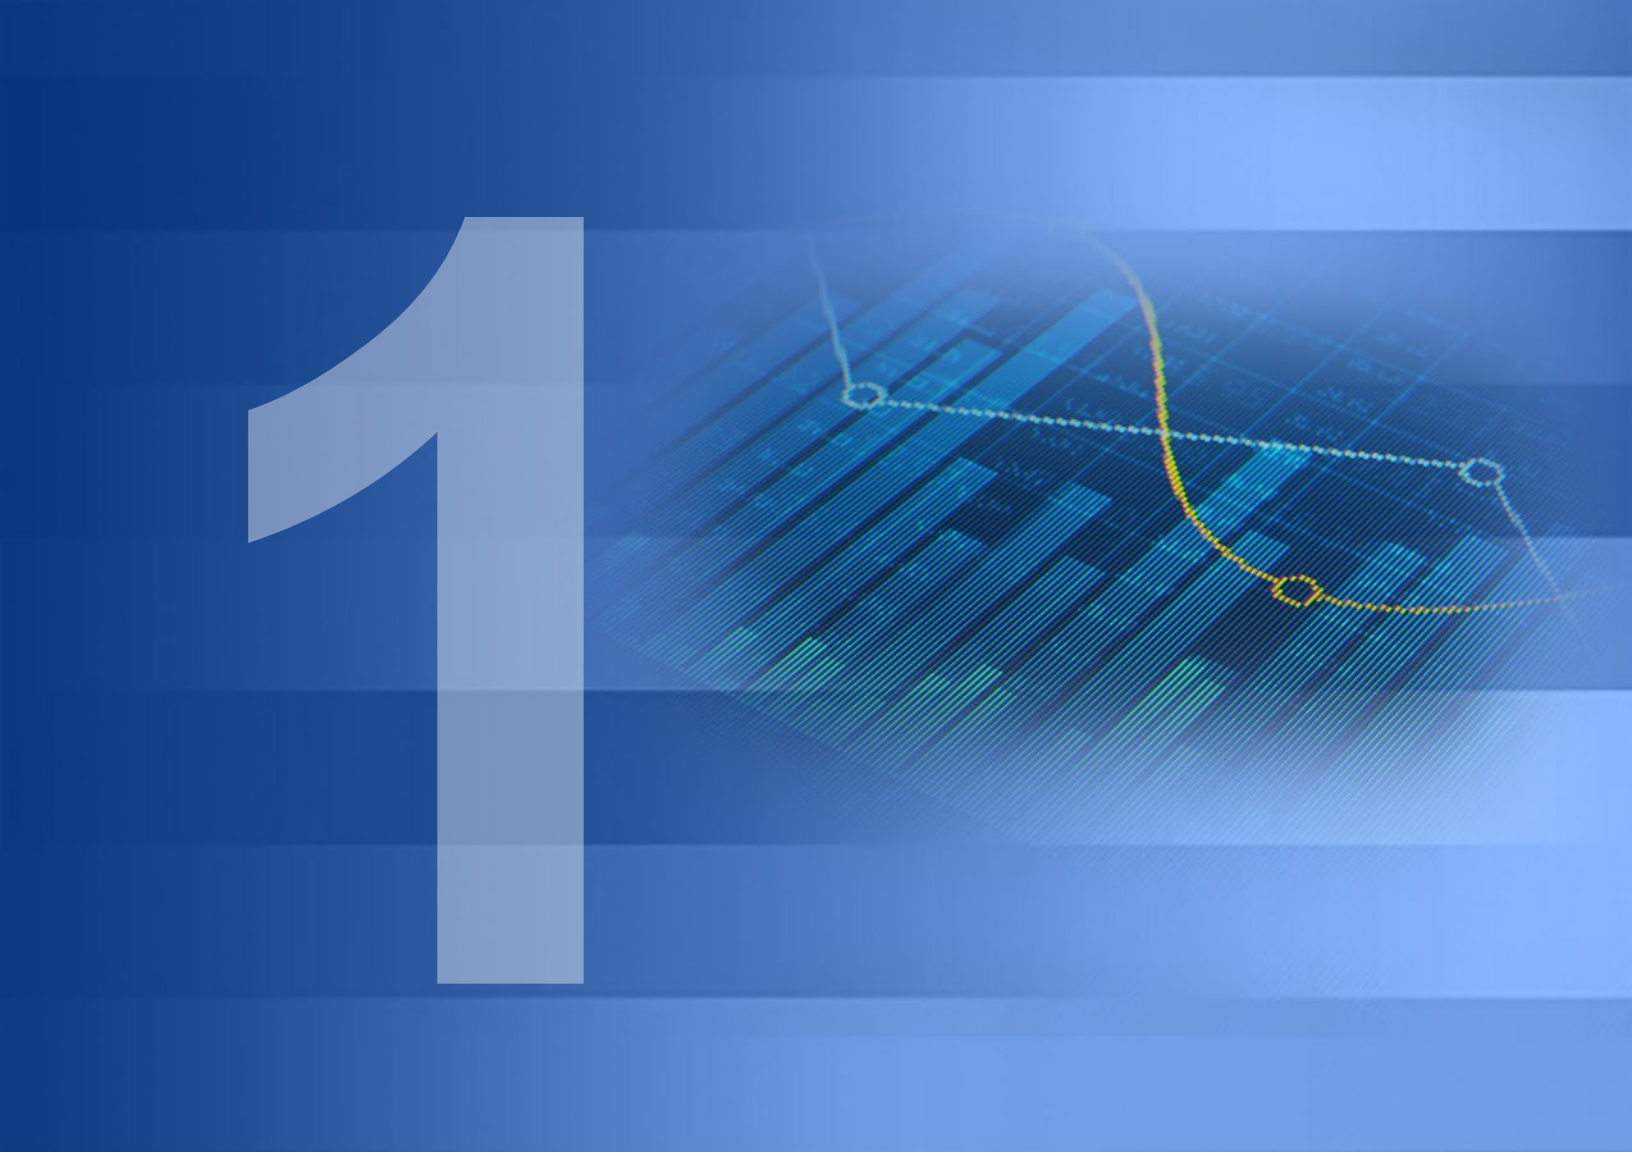
Requests for more information from FARS, NASS GES, or CRSS should be directed to:

National Highway Traffic Safety Administration
National Center for Statistics and Analysis, NSA-230
1200 New Jersey Avenue SE
Washington, DC 20590
800-934-8517
Email: NCSARequests@dot.gov

Additional information on all NHTSA's data files, including FARS, NASS GES, and CRSS can be found on the NCSA website at www.nhtsa.gov/data. Fact sheets, recent NCSA research notes, and abstracts of technical reports can be downloaded in PDF format. Comments and suggestions about the NCSA website can be emailed to NCSARequests@dot.gov.

Vehicle Safety Hotline

To report a motor vehicle safety-related problem or to inquire about safety information, contact the Vehicle Safety Hotline at 888-327-4236 or www.nhtsa.gov/report-a-safety-problem.



1 Trends

1. Trends

The tables in this chapter present statistics about police-reported motor vehicle traffic crashes over time. Trends for fatal traffic crashes and traffic fatalities generally are presented from 1975 (when FARS began operation) to 2022; however, tables with alcohol data from FARS show data only for the years this data are available: 1982 to 2022. Trends for nonfatal crashes are presented from NASS GES (1988 to 2015) and CRSS (2016 to 2022). Trends for people injured are presented from FARS (1988 to 2022) and NASS GES (1988 to 2015) or CRSS (2016 to 2022). **NASS GES data should not be compared to CRSS data.** Furthermore, care should be taken when comparing nonfatal crash and injury statistics from one year to the next. Since the statistics derived from NASS GES and CRSS data are estimates, year-to-year differences may be the result of the sampling process, not the result of an actual trend. The variability or sampling errors associated with the estimates must be considered when making any year-to-year comparisons using NASS GES or CRSS data (for more information on sampling error, see Appendix C). Below are some of the statistics you will find in this chapter.

- Fatal traffic crashes decreased by 1.4 percent from 2021 to 2022, and the traffic fatality rate decreased to 1.33 fatalities per 100 million VMT in 2022.
- The injury rate decreased by 6.3 percent from 2021 to 2022, to 75 people injured per 100 million VMT.
- The occupant fatality rate (including motorcyclists) per 100,000 population has declined by 39 percent from 1975 to 2022.
- The occupant injury rate (including motorcyclists) per 100,000 population, which declined by 45 percent from 1988 to 2015, decreased by 25 percent from 2016 to 2022.
- The nonoccupant fatality rate per 100,000 population has declined by 32 percent from 1975 to 2022.
- The nonoccupant injury rate per 100,000 population, which declined by 51 percent from 1988 to 2015, decreased by 24 percent from 2016 to 2022.
- The percent of alcohol-impaired-driving fatalities has declined from 48 percent in 1982 to 32 percent in 2022.

Sources: VMT and Licensed Drivers—FHWA; Registered Vehicles, 1966-1974—FHWA; Registered Vehicles, 1975-2022—FHWA and Polk data from S&P Global Mobility, Copyright © R.L. Polk & Co.; Population—Census Bureau; Traffic Deaths, 1966-1974—National Center for Health Statistics, D.H.H.S., State Accident Summaries (adjusted to 30-day traffic deaths by NHTSA); Traffic Deaths, 1975-2022—FARS, NHTSA, 30-day traffic deaths; People Injured—FARS and NASS GES/CRSS

Notes: Some States include restricted driver licenses and graduated driver licenses in their licensed driver counts. Due to an enhancement in the registration data provided by S&P Global Mobility, Copyright © R.L. Polk & Co., for 2011 and later years, registration counts for those years changed considerably from the counts provided for 2010 and earlier years. This should be considered when comparing registration numbers and rates per registered vehicle 2010 and earlier years with those for 2011 and later years. For more details, see pages 6-7 of this report. Estimates for people injured from 1988-2015 and 2016 and later are not comparable because NASS GES and CRSS have different sample designs. For more details, see page 5 of this report.

Sources: VMT—FHWA, revised by NHTSA for passenger cars and light trucks; Registered Passenger Cars and Light Trucks—Polk data from S&P Global Mobility, Copyright © R.L. Polk & Co.; Registered Large Trucks and Motorcycles—FHWA

Notes: See Tables 7 to 10 for notes regarding an enhanced methodology used to estimate registered vehicles and VMT for 2007 and after. Some States include restricted driver licenses and graduated driver licenses in their licensed driver counts. Due to an enhancement in the passenger car and light-truck registration data provided by S&P Global Mobility, Copyright © R.L. Polk & Co., for 2011 and later years, registration counts for those years changed considerably from the counts provided for 2010 and earlier years. This should be considered when comparing registration numbers and rates per registered vehicle for 2010 and earlier years with those for 2011 and later years. For more details, see pages 6-7 of this report. Estimates for vehicles involved in injury and property-damage-only crashes from 1988-2015 and 2016 and later are not comparable because NASS GES and CRSS have different sample designs. For more details, see page 5 of this report. The methodology for vehicle type classifications changed in 2020. For more details, see pages 5-6 of this report. Starting in 2022, motorcycles exclude motorized bicycles. For more details, see page 6 of this report.

*Includes two fatalities of unknown person type. This attribute was only available in 1996.

Notes: The methodology for vehicle type classifications changed in 2020. For more details, see pages 5-6 of this report. Starting in 2022, people on motorized bicycles are classified as pedalcyclists instead of motorcyclists. For more details, see page 6 of this report.

Notes: Estimates for people injured from 1988-2015 and 2016 and later are not comparable because NASS GES and CRSS have different sample designs. For more details, see page 5 of this report. The methodology for vehicle type classifications changed in 2020. For more details, see pages 5-6 of this report. Starting in 2022, people on motorized bicycles are classified as pedalcyclists instead of motorcyclists. For more details, see page 6 of this report.

Table 5. Drivers Involved in Crashes and Involvement Rates per Licensed Driver, by Sex and Crash Severity, 1975-2022

Year	Sex						Total*		
	Male			Female					
	Number Involved in Crashes	Licensed Drivers	Involvement Rate per 100,000 Licensed Drivers	Number Involved in Crashes	Licensed Drivers	Involvement Rate per 100,000 Licensed Drivers	Number Involved in Crashes	Licensed Drivers	Involvement Rate per 100,000 Licensed Drivers

Source: Licensed Drivers—FHWA

Notes: Some States include restricted driver licenses and graduated driver licenses in their licensed driver counts. Estimates for drivers involved in injury and property-damage-only crashes from 1988-2015 and 2016 and later are not comparable because NASS GES and CRSS have different sample designs. For more details, see page 5 of this report. Licensed drivers may include drivers under 15, because individual age data are not available for those under 16.

Source: Licensed Drivers—FHWA

Notes: Some States include restricted driver licenses and graduated driver licenses in their licensed driver counts. Estimates for drivers involved in injury and property-damage-only crashes from 1988-2015 and 2016 and later are not comparable because NASS GES and CRSS have different sample designs. For more details, see page 5 of this report. Licensed drivers may include drivers under 15, because individual age data are not available for those under 16.

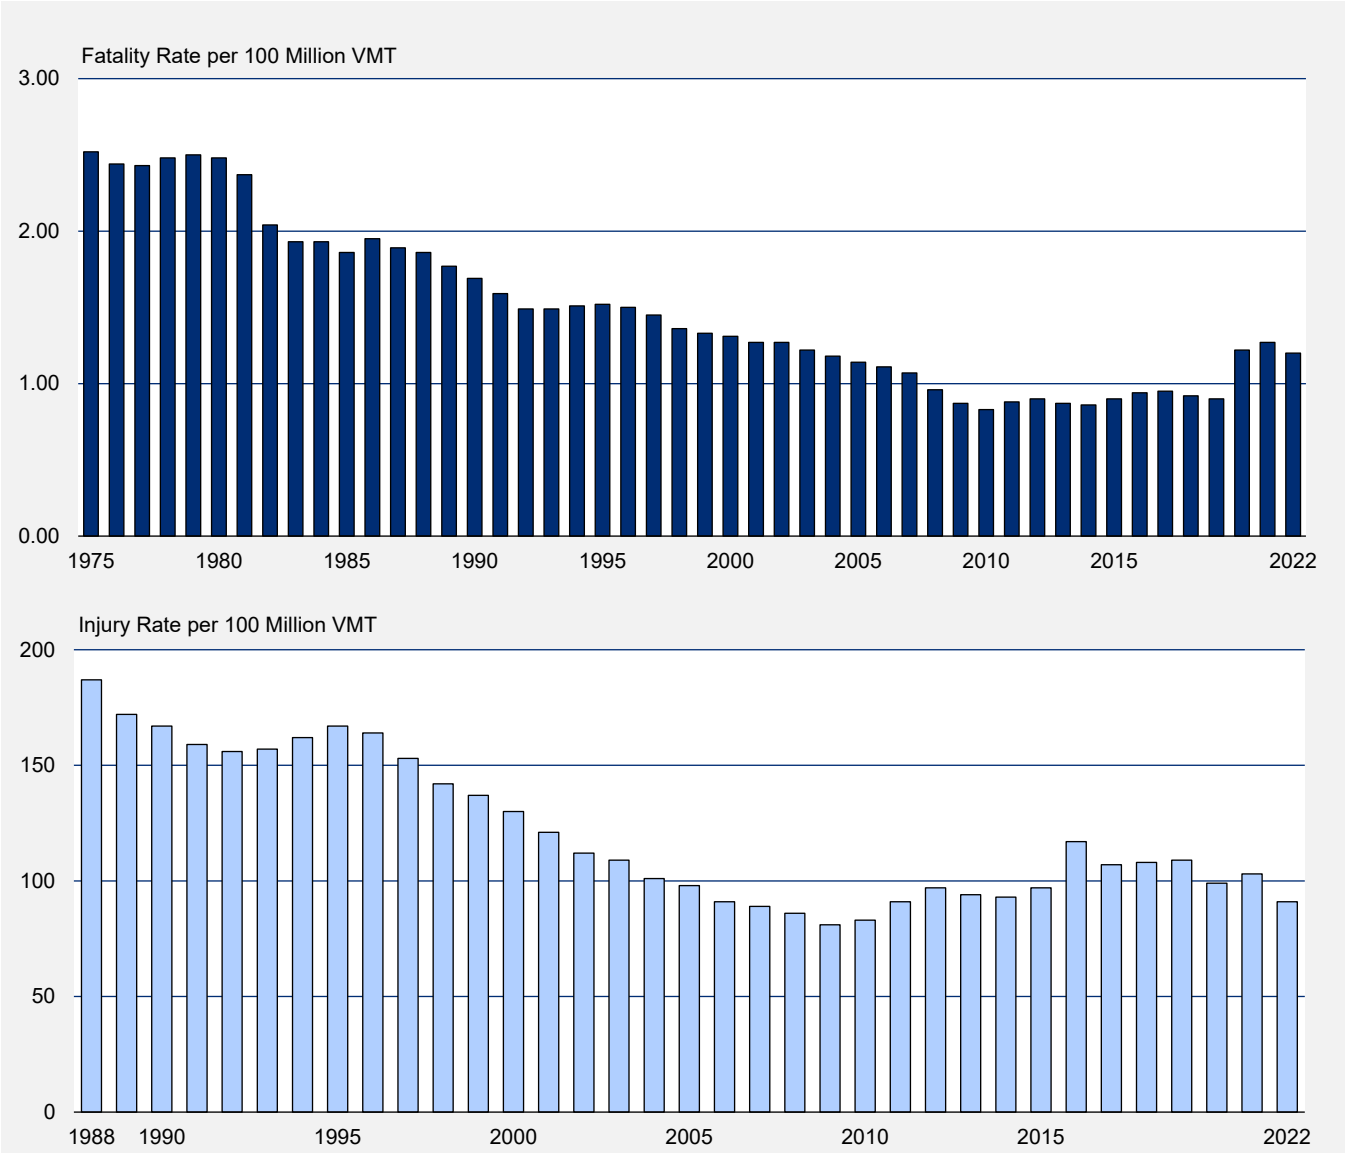
Sources: VMT—FHWA, revised by NHTSA; Registered Passenger Cars—Polk data from S&P Global Mobility, Copyright © R.L. Polk & Co.

*Injury data not available before 1988.

Notes: In 2011 the FHWA implemented an enhanced methodology for estimating registered vehicles and VMT by vehicle type. These revisions were applied to data from 2007 and later. In some cases, the changes were significant and should be considered when comparing registered vehicle counts and/or VMT for 2006 and earlier years with the numbers for 2007 and later years. Due to an enhancement in the passenger vehicle registration data provided by S&P Global Mobility, Copyright © R.L. Polk & Co., for 2011 and later, registration counts for those years changed considerably from the counts provided for 2010 and earlier years. This should be considered when comparing registration numbers and rates per registered vehicles for passenger cars for 2010 and earlier years with those for 2011 and later years. For more details, see pages 6-7 of this report. Estimates for people injured from 1988-2015 and 2016 and later are not comparable because NASS GES and CRSS have different sample designs. For more details, see page 5 of this report. The methodology for vehicle type classifications changed in 2020. For more details, see pages 5-6 of this report.

Figure 4. Passenger Car Occupant Fatality and Injury Rates per 100 Million VMT, 1975-2022



Sources: VMT—FHWA, revised by NHTSA
Note: The methodology for vehicle type classifications changed in 2020. For more details, see pages 5-6 of this report.

*Injury data not available before 1988.
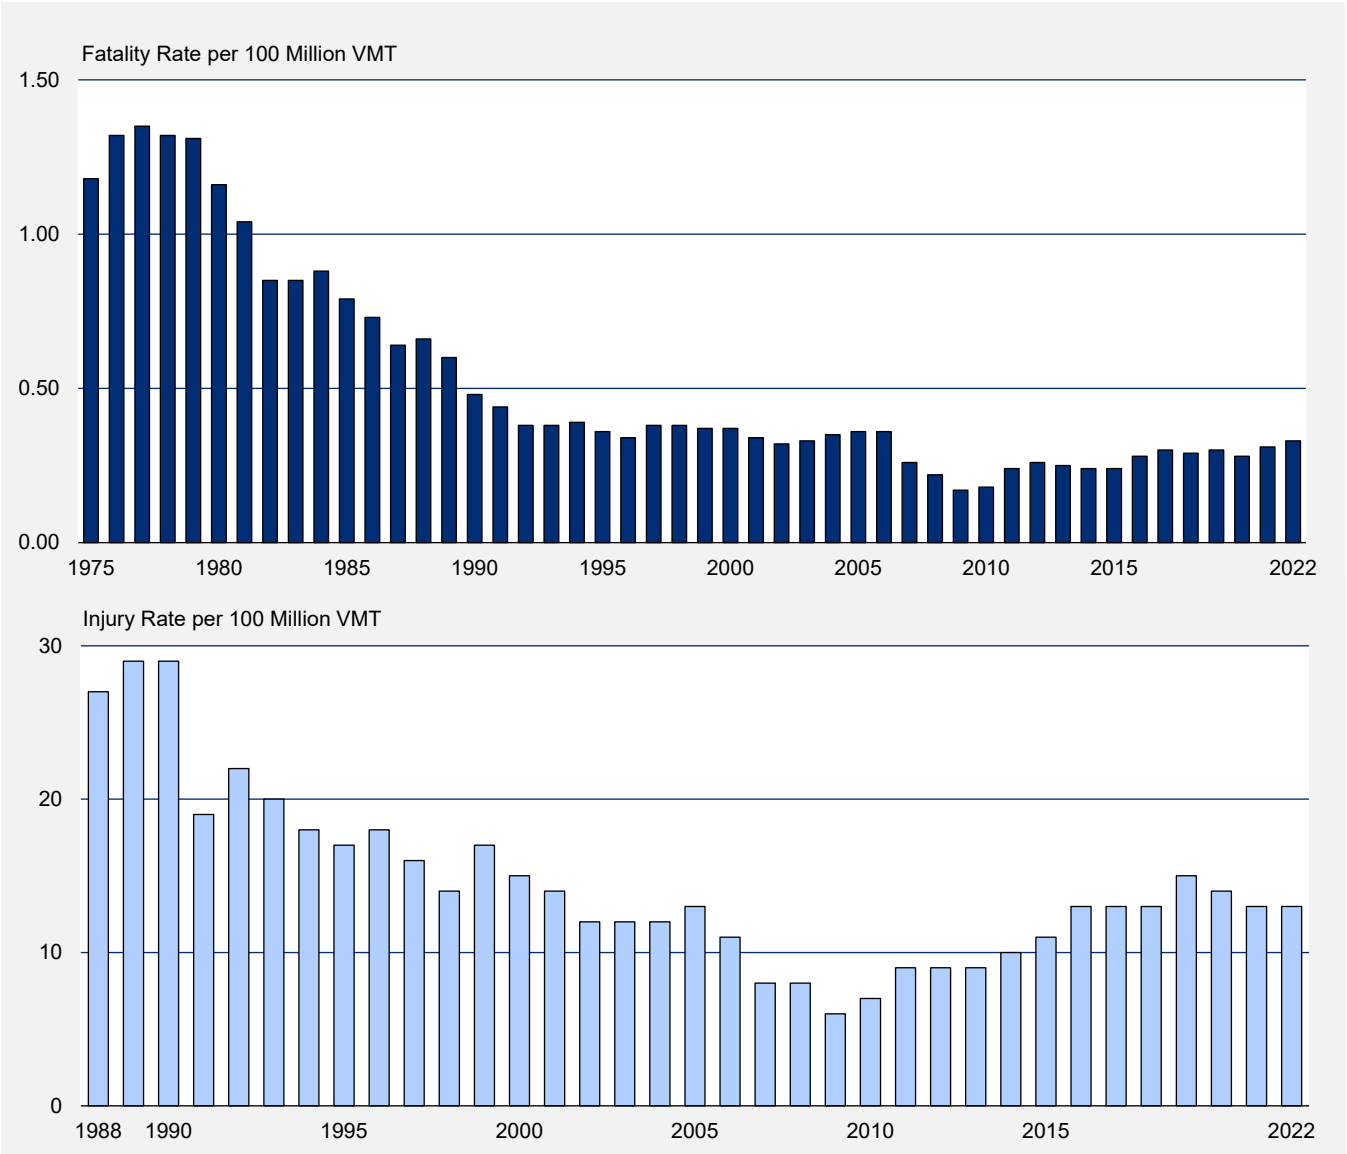
Notes: In 2011 the FHWA implemented an enhanced methodology for estimating registered vehicles and VMT by vehicle type. These revisions were applied to data from 2007 and later. In some cases, the changes were significant and should be considered when comparing registered vehicle counts and/or VMT for 2006 and earlier years with the numbers for 2007 and later years. For more details, see pages 6-7 of this report. Estimates for people injured from 1988-2015 and 2016 and later are not comparable because NASS GES and CRSS have different sample designs. For more details, see page 5 of this report. The methodology for vehicle type classifications changed in 2020. For more details, see pages 5-6 of this report.

Figure 6. Large-Truck Occupant Fatality and Injury Rates per 100 Million VMT, 1975-2022



Sources: VMT—FHWA
Note: The methodology for vehicle type classifications changed in 2020. For more details, see pages 5-6 of this report.

2022	420 (3)	37	502 (3)	43	487 (3)	40

*Highest BAC among drivers involved in the crash was .08 g/dL or greater.

**The number of whole days in the holiday period is shown in parentheses. The length of the holiday period depends on the day on which the legal holiday falls, as follows:

- If the holiday falls on Monday, the holiday period is from 6 p.m. Friday to 5:59 a.m. Tuesday.
- If the holiday falls on Tuesday, the holiday period is from 6 p.m. Friday to 5:59 a.m. Wednesday.
- If the holiday falls on Wednesday, the holiday period is from 6 p.m. Tuesday to 5:59 a.m. Thursday.
- If the holiday falls on Thursday, the holiday period is from 6 p.m. Wednesday to 5:59 a.m. Monday.
- If the holiday falls on Friday, the holiday period is from 6 p.m. Thursday to 5:59 a.m. Monday.
- Number of days and number of hours incorporated: 1 day (36 hours), 2 days (60 hours), 3 days (84 hours), 4 days (108 hours).

***No data available.

Note: NHTSA estimates BACs when alcohol test results are unknown. For more details, see page 5 of this report.

Table 14. People Killed and Percentage Alcohol-Impaired Driving During Holiday Periods, 1982-2022 (Continued)

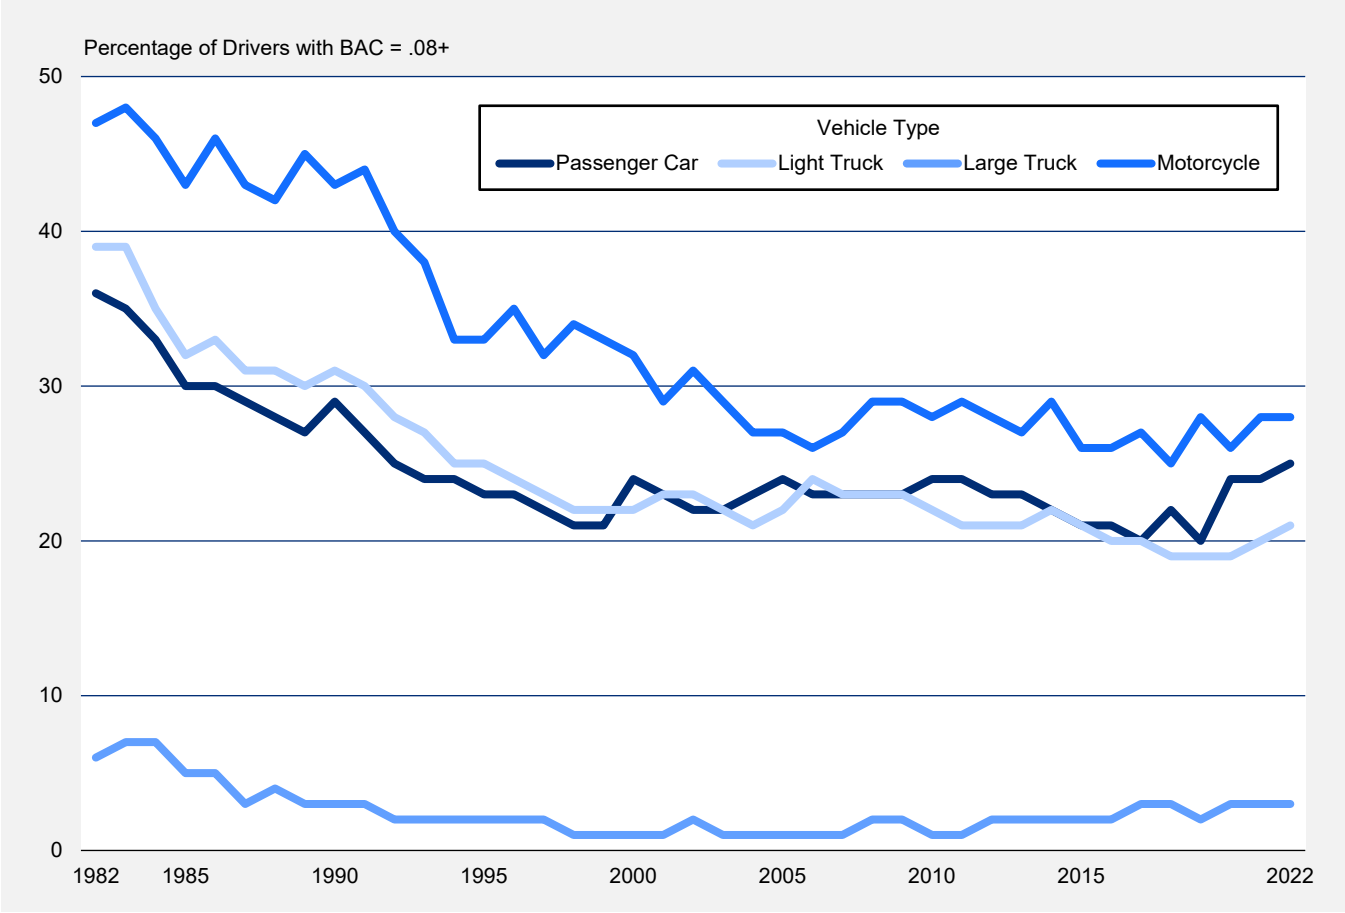
Notes: NHTSA estimates BACs when alcohol test results are unknown. For more details, see page 5 of this report. The methodology for vehicle type classifications changed in 2020. For more details, see pages 5-6 of this report. Starting in 2022, motorcyclists exclude people on motorized bicycles. For more details, see page 6 of this report.

Figure 9. Proportion of Drivers in Fatal Crashes With BACs = .08+ g/dL, by Vehicle Type, 1982-2022



Notes: The methodology for vehicle type classifications changed in 2020. For more details, see pages 5-6 of this report. Starting in 2022, motorcyclists exclude people on motorized bicycles. For more details, see page 6 of this report.

2022	2,168,815	87.0	83,898	3.4	239,717	9.6	**2,492,430**	**100.0**

Notes: Restraint use is determined by police and may be overreported for survivors. Estimates for drivers involved in injury and property-damage-only crashes from 1988-2015 and 2016 and later are not comparable because NASS GES and CRSS have different sample designs. For more details, see page 5 of this report.

Notes: Restraint use is determined by police and may be overreported for survivors. Estimates for drivers involved in injury and property-damage-only crashes from 1988-2015 and 2016 and later are not comparable because NASS GES and CRSS have different sample designs. For more details, see page 5 of this report.

*Includes occupants of other and unknown light trucks.

Note: The methodology for vehicle type classifications changed in 2020. For more details, see pages 5-6 of this report.

2

Crashes

2. Crashes

This chapter presents statistics about police-reported motor vehicle traffic crashes according to the most severe injury in the crash: **Fatal, Injury** (Nonfatal), and **Property Damage** (No Injury). The tables and figures are presented in four groups: Time, Location, Circumstances, and Alcohol. Below are some of the crash statistics you will find in this section.

- More than 5.9 million police-reported motor vehicle traffic crashes occurred in the United States in 2022. Twenty-eight percent of those crashes (1.7 million) resulted in injury, and fewer than 1 percent (39,221) resulted in death.
- Nine p.m. to 11:59 p.m. on Saturdays proved to be the deadliest 3-hour periods throughout 2022 with 1,263 fatal crashes, followed by midnight to 2:59 a.m. on Sundays with 1,239 fatal crashes.
- Fifty-seven percent of fatal traffic crashes involved only one vehicle, as compared with 30 percent of injury crashes and 30 percent of property-damage-only crashes.
- Collision with another motor vehicle in-transport was the most common first harmful event for fatal, injury, and property-damage-only crashes. Collisions with fixed objects and noncollisions accounted for only 17 percent of all crashes, but they accounted for 37 percent of fatal crashes.
- Thirty-one percent of all fatal traffic crashes involved alcohol-impaired driving, where the highest BAC among drivers involved in the crashes was .08 g/dL or higher. For fatal traffic crashes occurring from midnight to 2:59 a.m., 55 percent involved alcohol-impaired driving.

Table 24. Crashes and Crash Rates, by Month and Crash Severity

Month	Crash Severity						Total Crashes	
	Fatal		Injury		Property Damage Only			
	Number	Rate*	Number	Rate*	Number	Rate*	Number	Rate*
January	2,946	1.25	121,469	51.00	343,490	146.00	**467,905**	**198.00**
February	2,748	1.19	122,263	53.00	334,240	145.00	**459,251**	**199.00**
March	3,050	1.12	142,261	52.00	352,250	130.00	**497,562**	**183.00**

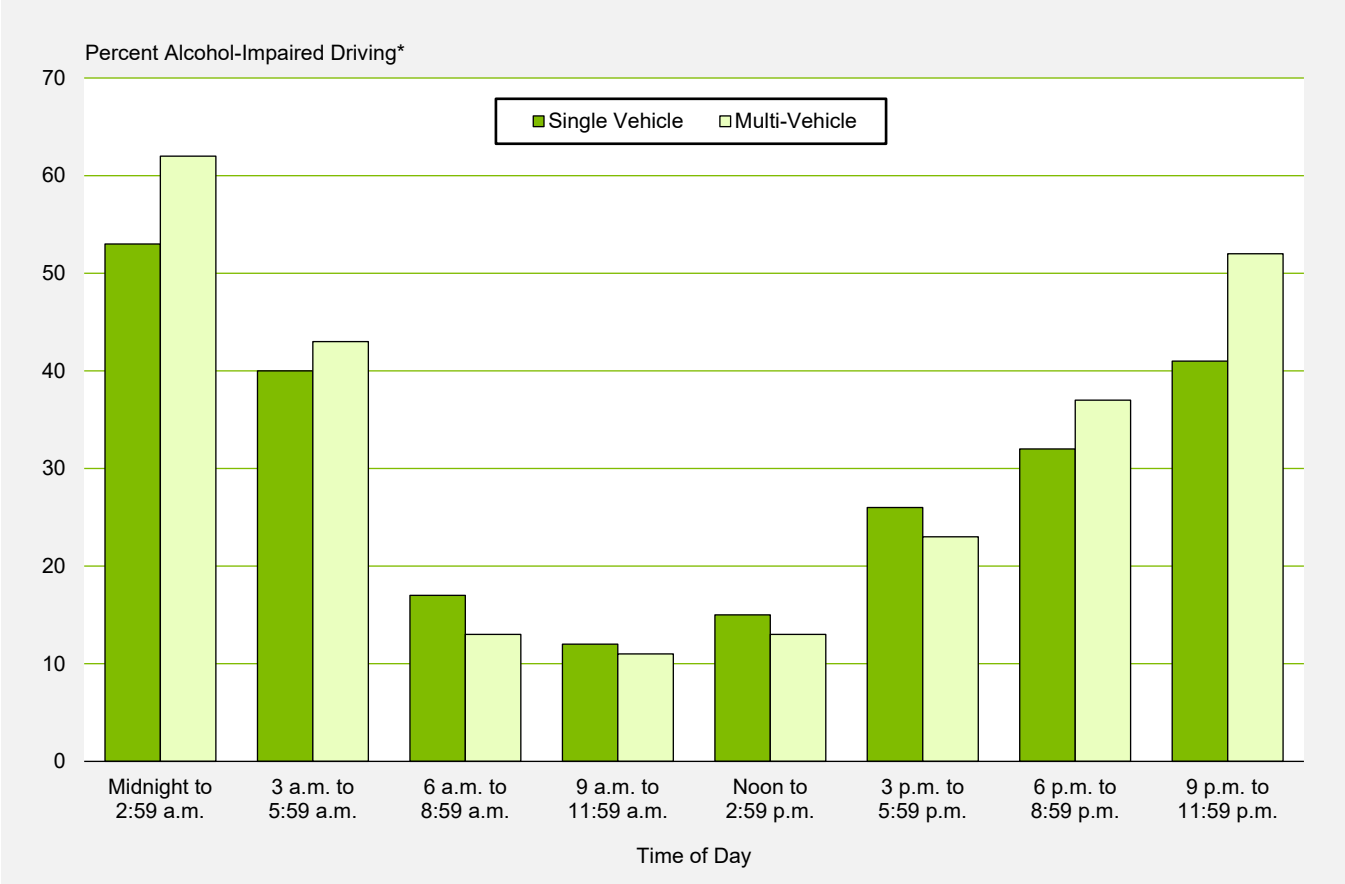
*Highest BAC among drivers involved in the crash was .08 g/dL or greater.
Note: NHTSA estimates BACs when alcohol test results are unknown. For more details, see page 5 of this report.

Figure 12. Percentage of Fatal Crashes Involving Alcohol-Impaired Driving, by Time of Day and Crash Type



*Highest BAC among drivers involved in the crash was .08 g/dL or greater.
Note: NHTSA estimates BACs when alcohol test results are unknown. For more details, see page 5 of this report.

3 Vehicles

3. Vehicles

Statistics about the vehicles involved in police-reported motor vehicle traffic crashes are presented in this chapter, according to six major vehicle types: passenger cars, light trucks (including pickups, vans, and utility vehicles with a gross vehicle weight rating of 10,000 pounds or less), large trucks (including single-unit trucks and truck tractors with a GVWR of more than 10,000 pounds), motorcycles (including two- and three-wheeled motorcycles, off-road motorcycles, mopeds, motor scooters, minibikes, and pocket bikes), buses (including school buses and transit buses), and other vehicles (including all-terrain vehicles, farm and construction equipment, and motorhomes). The tables and figures are presented for all vehicle types first, then by individual vehicle type. Below are some of the vehicle statistics you will find in this section.

- Eighty-one percent of the 10.5 million vehicles involved in motor vehicle traffic crashes in 2022 were passenger cars or light trucks.
- Large trucks accounted for 9.6 percent of the vehicles in fatal traffic crashes, but only 3.9 percent of the vehicles involved in injury crashes and 5.5 percent of the vehicles involved in property-damage-only crashes. Of the 5,837 large trucks involved in fatal crashes, 64.4 percent were combination trucks.
- The proportion of vehicles that rolled over in fatal traffic crashes (15.9%) was more than 3 times as high as the proportion in injury crashes (4.3%) and more than 14 times as high as the proportion in property-damage-only crashes (1.1%).
- Compared with passenger cars, utility vehicles, vans, large trucks, and buses, pickup trucks experienced the highest rollover rate in fatal traffic crashes (20.8%). Large trucks experienced the highest rollover rate in injury crashes (9.2%) and property-damage-only crashes (2.2%).
- Fires occurred in 0.2 percent of the vehicles involved in all traffic crashes in 2022. For fatal traffic crashes, however, fires occurred in 3.7 percent of the vehicles involved.
- Regardless of crash severity, most vehicles in single- and two-vehicle crashes were going straight prior to the crashes. The next most common vehicle maneuver differed by crash severity: negotiating a curve for fatal traffic crashes, turning left for injury crashes, and stopped in roadway for property-damage-only crashes.
- Motorcycles in fatal traffic crashes had the highest proportion of collisions with fixed objects (13.2%), and buses in fatal traffic crashes had the lowest proportion (4.8%).

Table 32. Vehicles Involved in Crashes, by Relation to Junction, Traffic Control Device, and Crash Severity

Relation to Junction	Traffic Control Device				Total
	None	Traffic Signal	Stop Sign	Other/Unknown	
Fatal Crashes

4

People

4. People

This chapter presents statistics about the drivers, passengers, pedestrians, and pedalcyclists involved in police-reported motor vehicle traffic crashes in 2022. The tables and figures are presented in nine groups: all killed and injured people, crash-involved drivers, occupants (drivers and passengers), alcohol, restraints, motorcycle-related, school-bus-related, pedestrians, and pedalcyclists. Below are some of the statistics you will find in this section.

- A total of 42,514 people lost their lives in motor vehicle traffic crashes in 2022. Another 2.4 million people were injured.
- Most people killed and injured in traffic crashes were drivers (68%), followed by passengers (23%), motorcyclists (4%), pedestrians (3%), and pedalcyclists (2%).
- Per 100,000 population, people 21 to 24 years old had the highest fatality rate and the highest injury rate. Children 5 to 9 years old had the lowest fatality rate, and children under 5 years old had the lowest injury rate per 100,000 population.
- The fatality rate per 100,000 population was lower for females than for males. The injury rate based on population was nearly the same for females and males.
- Of the people who were killed in 2022 in traffic crashes, 32 percent died in alcohol-impaired-driving crashes.

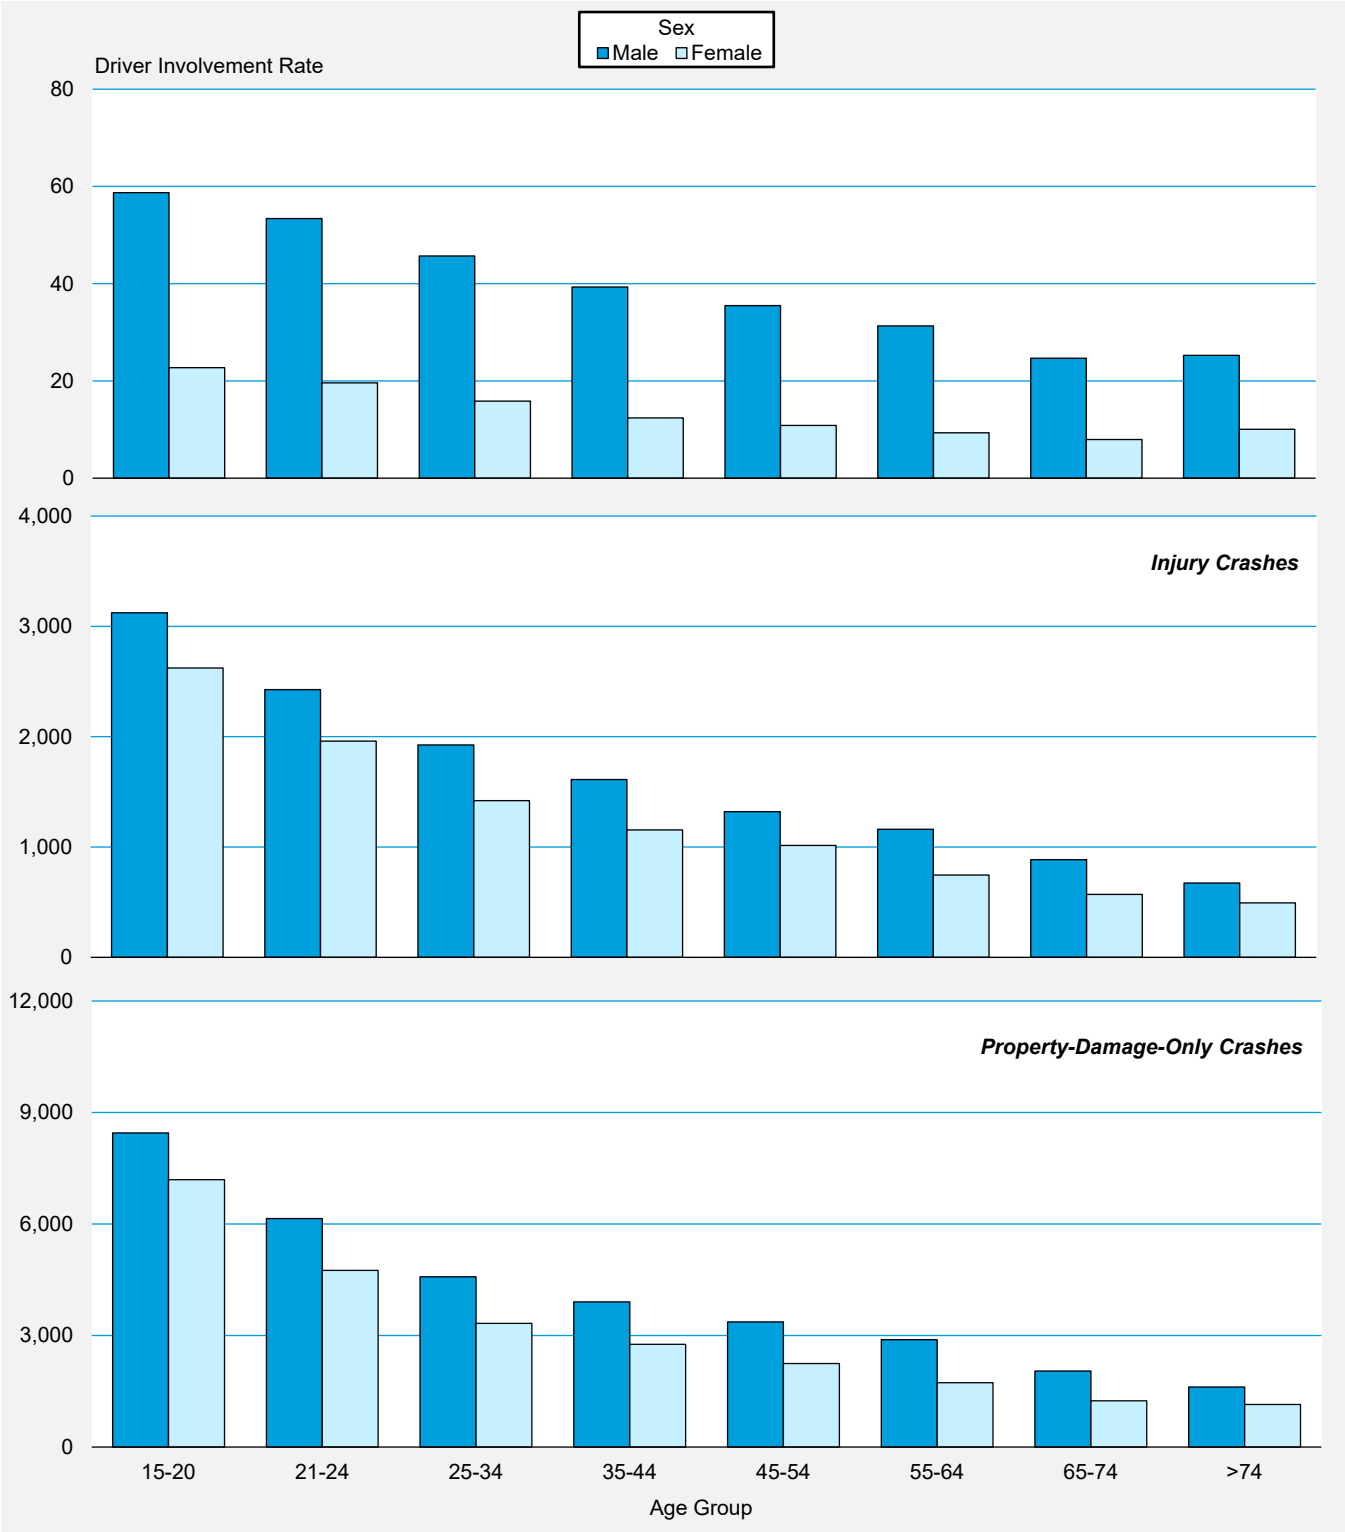
Source: Licensed Drivers—FHWA
*Includes drivers in fatal crashes of unknown sex.
**Not applicable.
Notes: Some States include restricted driver licenses and graduated driver licenses in their licensed driver counts. Totals may not equal sum of components due to independent rounding. Licensed drivers age 15 to 20 may include drivers under 15, because individual age data are not available for those under 16.

Figure 22. Driver Involvement Rates per 100,000 Licensed Drivers, by Age Group, Sex, and Crash Severity



Notes: Licensed drivers age 15 to 20 may include drivers under 15, because individual age data are not available for those under 16.

Table 63. Drivers Involved in Fatal Crashes, by Previous Driving Record and License Compliance

Previous Convictions	Valid License (47,548)		Invalid License (9,958)		Total (57,506)	
	Number	Percent	Number	Percent	Number	Percent
Previous Recorded Crashes	7,852	16.5	1,565	15.7	**9,417**	**16.4**
Previous Recorded Suspensions or Revocations	3,450	7.3	3,013	30.3	**6,463**	**11.2**
Previous DWI Convictions	755	1.6	820	8.2	**1,575**	**2.7**
Previous Speeding Convictions	8,051	16.9	1,630	16.4	**9,681**	**16.8**
Previous Other Harmful Moving Convictions	7,192	15.1	2,289	23.0	**9,481**	**16.5**
Drivers with No Previous Convictions	27,550	57.9	4,503	45.2	**32,053**	**55.7**

Notes: Table does not include drivers with unknown license compliance. FARS records prior driving records (convictions only, not violations) for events occurring within 5 years of the date of the crash. The same driver can have one or more of these convictions. License compliance refers to the type of driver license possessed or not possessed by the driver for the class of vehicle being driven at the time of the crash.

Table 64. Related Factors for Drivers Involved in Fatal Crashes

Factors	Number	Percent
Driving too fast for conditions, in excess of posted speed limit, or racing	11,103	18.5
Under the influence of alcohol, drugs, or medication	6,594	11.0
Operating vehicle in a careless manner	5,319	8.9
Failure to yield right-of-way	4,432	7.4
Failure to keep in proper lane	3,420	5.7
Distracted (phone, talking, eating, object, etc.)	3,124	5.2
Failure to obey traffic signs, signals, or officer	2,541	4.2
Operating vehicle in erratic, reckless, or negligent manner	2,251	3.7
Overcorrecting/oversteering	1,708	2.8
Vision obscured (rain, snow, glare, lights, building, trees, etc.)	1,542	2.6
Swerving or avoiding due to wind, slippery surface, vehicle, object, non-motorist in roadway, etc.	1,334	2.2
Driving wrong way on one-way trafficway or wrong side of road	1,282	2.1
Drowsy, asleep, fatigued, ill, or blackout	1,264	2.1
Making improper turn	485	0.8
Other factors	6,017	10.0
None reported	8,492	14.1
Unknown	20,263	33.7
Total Drivers	**60,048**	**100.0**

Notes: The sum of the numbers and percentages is greater than total drivers as more than one factor may be present for the same driver.

Notes: Only includes crashes where the first harmful event was a collision with a pedestrian. Totals may not equal sum of components due to independent rounding.

Table 100. Pedestrians Killed, by Related Factors

Factors	Number	Percent
Failure to yield right-of-way	3,973	52.8
Improper crossing of roadway or intersection	1,570	20.9
In roadway improperly (standing, lying, working, playing)	854	11.4
Not visible (dark clothing, no lighting, etc.)	845	11.2
Under the influence of alcohol, drugs, or medication	697	9.3
Darting or running into road	650	8.6
Wrong-way walking	621	8.3
Traveling on prohibited trafficway	265	3.5
Distracted (phone, talking, eating, object, etc.)	257	3.4
Failure to obey traffic signs, signals, or officer	234	3.1
Physical impairment	163	2.2
Entering/exiting parked or stopped vehicle	49	0.7
Emotional (e.g., depression, angry, disturbed)	41	0.5
Vision obscured (by rain, snow, parked vehicle, sign, etc.)	19	0.3
Ill, blackout	13	0.2
Asleep or fatigued	10	0.1
Non-motorist pushing vehicle	7	0.1
Other factors	249	3.3
None reported	114	1.5
Unknown	1,451	19.3
Total Pedestrians	**7,522**	**100.0**

Note: The sum of the numbers and percentages is greater than total pedestrians killed as more than one factor may be present for the same pedestrian.

Table 101. Pedalcyclists Killed and Injured, by Age Group and Location

*Includes sidewalk, bicycle lane, median/crossing island, parking lane/zone, shoulder/roadside, driveway access, shared-use path, and non-traffic area, which may or may not have been at intersection, but were not distinguished by collected data. Thus, “At Intersection” and “Not At Intersection” do not include those in the “Other” category that were at intersection or not at intersection.

**Includes pedalcyclists killed and injured at unknown locations.

***Includes pedalcyclists injured in fatal crashes from FARS with unknown age.

Notes: Totals may not equal sum of components due to independent rounding. Starting in 2022, pedalcyclists include people on motorized bicycles. For more details, see page 6 of this report.

Notes: Only includes crashes where the first harmful event was a collision with a pedalcyclist. Totals may not equal sum of components due to independent rounding. Starting in 2022, pedalcyclists include people on motorized bicycles. For more details, see page 6 of this report.

Table 105. Pedalcyclists Killed, by Related Factors

Factors	Number	Percent
Failure to yield right-of-way	310	28.1
Not visible (dark clothing, no lighting, etc.)	131	11.9
Wrong-way riding	129	11.7
Failure to obey traffic signs, signals, or officer	114	10.3
Under the influence of alcohol, drugs, or medication	68	6.2
Making improper turn	63	5.7
Operating without required equipment	47	4.3
Riding on wrong side of the road	43	3.9
Failing to have lights on when required	29	2.6
Distracted (phone, talking, eating, object, etc.)	28	2.5
Improper lane usage	19	1.7
Improper or erratic lane changing	15	1.4
Physical impairment	14	1.3
Making improper entry or exit from trafficway	12	1.1
Traveling on prohibited trafficways	11	1.0
Vision obscured (by reflected glare, parked vehicle, sign, etc.)	9	0.8
Improper passing	7	0.6
Erratic, reckless, careless, or negligent operation	7	0.6
Darting into road	4	0.4
In roadway improperly (standing, lying, working, playing)	3	0.3
Ill, blackout	2	0.2
Emotional (e.g., depression, angry, disturbed)	2	0.2
Passing with insufficient distance	1	0.1
Other factors	33	3.0
None reported	33	3.0
Unknown	374	33.8
Total Pedalcyclists	**1,105**	**100.0**

Notes: The sums of the numbers and percentages are greater than total pedalcyclists killed as more than one factor may be present for the same pedalcyclist. Starting in 2022, pedalcyclists include people on motorized bicycles. For more details, see page 6 of this report.

States

5. States

Fatal traffic crash and traffic fatality statistics for each of the 50 States, the District of Columbia, and Puerto Rico are presented in this chapter. Several tables display State fatality rates based on population, licensed drivers, and registered vehicles. The last page describes the States' occupant restraint and motorcycle helmet laws. Below are some of the State statistics you will find in this chapter.

- Traffic fatalities decreased by 2 percent from 2021 to 2022 for the Nation as a whole. Twenty-nine States showed decreases, ranging from 1 percent to as much as 22 percent.
- About 2.6 percent of all traffic crash fatalities in 2022 were pedalcyclists. Nebraska and Rhode Island reported no pedalcyclists killed.
- The pedestrian fatality rate per 100,000 population was 2.26 for the Nation. New Mexico had the highest rate (4.40), and Iowa had the lowest rate (0.50).
- In 2022 there were 34 States, the District of Columbia, and Puerto Rico that had primary seat belt laws in effect and 15 States had secondary seat belt laws. Only one State (New Hampshire) has no seat belt law for adults.
- All 50 States, the District of Columbia, and Puerto Rico have laws requiring children of certain ages to be restrained in child safety seats.
- Motorcycle helmets were required for all riders in 18 States, the District of Columbia, and Puerto Rico in 2022. Twenty-nine States had helmet requirements with exceptions (age, rider type, roadway type), and 3 States (Illinois, Iowa, and New Hampshire) did not require helmets at all.
- In 2022 it was a criminal offense to operate a motor vehicle at a BAC of .08 g/dL or above in all 50 States, the District of Columbia, and Puerto Rico. Note: Utah set a lower threshold of .05 g/dL or higher that went into effect on December 30, 2018.

Restraint Use and Motorcycle Helmet Use Laws

Restraint Use Laws

The first mandatory seat belt use law was enacted in New York in 1984. Adult seat belt use laws are now in effect in 49 States, the District of Columbia, and Puerto Rico. The laws differ from State to State, according to the type and age of the vehicle, occupant age and seating position, etc. The goal of these laws is to promote seat belt use and thereby reduce deaths and injuries in motor vehicle crashes.

In 2022 there were 34 States, the District of Columbia, and Puerto Rico that had primary seat belt laws in effect, enabling law enforcement officers to stop vehicles and write citations when they observed violations of the seat belt law. In 15 States the laws specified secondary enforcement, meaning that law enforcement officers were permitted to write citations only after a vehicle was stopped for some other traffic infraction. New Hampshire is the only State without a seat belt law for adults, although it does have a primary child passenger safety law that covers all drivers and passengers under age 18.

The first mandatory child restraint use law was implemented in Tennessee in 1978. Since 1985 all 50 States and the District of Columbia have had child restraint use laws in effect. Child restraint use laws differ from State to State, in terms of the ages of children covered and in other important ways, including height and weight limits, seating position requirements, and various exemptions and exceptions.

The most current information on seat belt laws and child passenger safety laws is available on the website of the Governors Highway Safety Association (GHSA) at www.ghsa.org.

- Seat belt laws—www.ghsa.org/html/stateinfo/laws/seatbelt_laws.html
- Child passenger safety laws—www.ghsa.org/html/stateinfo/laws/childsafety_laws.html

In 2022 seat belt use rates in the United States ranged from 75.6 percent in Virginia to 96.5 percent in Oregon. Twenty-six States and the District of Columbia achieved belt use rates of 90.0 percent or higher. These results are from probability-based observational surveys conducted by 50 States, the District of Columbia, and U.S. Territories. The nationwide seat belt use rate in 2022 was 91.6 percent, as measured by NHTSA's National Occupant Protection Use Survey (NOPUS). NOPUS is a national probability-based survey, which is independent from State belt use surveys. Observed seat belt use rates for the States and the Nation in 2022 can be found in *Seat Belt Use in 2022—Use Rates in the States and Territories* (NCSA, 2023a).

Motorcycle Helmet Use Laws

In 2022 there were 18 States, the District of Columbia, and Puerto Rico that required helmet use by all motorcyclists. In 29 States helmet use was required for only a subset of motorcyclists (typically, motorcyclists under age 18), and three States (Illinois, Iowa, and New Hampshire) do not require helmet use for motorcyclists of any age.

The most current information on helmet use laws is available on the GHSA website at www.ghsa.org/state-laws/issues/motorcyclists.

According to results from NOPUS, the overall rate of DOT-compliant motorcycle helmet use in the United States was 66.5 percent in 2022. Helmet use continued to be significantly higher in States that required all motorcyclists to be helmeted than in other States. In 2022 DOT compliant motorcycle helmet use in States requiring all to use helmets was 81.5 percent compared to 56.2 percent in other

5. States

States. Information on motorcycle helmet use in 2022 can be found in *Motorcycle Helmet Use in 2022—Overall Results* (NCSA, 2023b).

Appendix C: CRSS Technical Notes

Standard Errors

The estimates generated using CRSS data are subject to sampling errors, because they are based on a probability sample of crashes instead of all crashes. The sampling error is a measure of the variability of an estimator from its mean under repeated sample selections. The magnitude of the sampling error depends on the study variable, the estimator used, and the CRSS sample design.

The CRSS sample was selected with design features such as stratification, clustering, and unequal selection probabilities (see *Crash Report Sampling System: Sample Design and Weighting* (Zhang, Noh, et al., 2019a) for more details). As a result, the CRSS sample is not a simple random sample. Failing to consider these design features in the estimation can cause bias in both the CRSS point estimates and the associated standard error estimates.

Estimation methods and computer software have been developed to make estimates from complex survey data like CRSS. Specialized procedures for analysis of complex survey data, such as SAS PROC SURVEY procedures and SUDAAN procedures, should be used for CRSS data analysis, along with proper design statements. See *Crash Report Sampling System: Design Overview, Analytic Guidance, and FAQs* (Zhang, Subramanian, et al., 2019b) for some basic concepts of complex survey data analysis and examples.

For readers who do not have access to the specialized software, the generalized variance function (GVF) method can be used to generate ballpark standard error estimates for a large quantity of estimates in a simpler way. With the GVF, readers can plug in the point estimate and calculate its estimated standard error directly. In Traffic Safety Facts annual reports for prior years, NHTSA published separate GVF estimates for the NASS GES crash, vehicle, and people characteristics. For more information see Appendix C of *National Automotive Sampling System (NASS) General Estimates System (GES) Analytical User's Manual 1988-2015* (NHTSA, 2019). Information on the GVFs for CRSS, which replaced NASS GES in 2016, can be found in Appendix C of *Crash Report Sampling System: Generalized Variance Functions* (Zhang & Diaz, 2020) and Appendix F of *Crash Report Sampling System Analytical User's Manual, 2016-2022* (NCSA, 2024).

Unknowns

CRSS data are obtained either directly from an item on the PCR or by interpreting the information provided in the report through reviewing the crash diagram, the officer's written summary of the crash, or combinations of variables on the PCR. Because of this interpretation, and because the police officer may not have entered some item of information or provided complete information, data can be missing. Prior to 2010 data, two different statistical procedures were used on NASS GES data to complete values for unknown data. These procedures, univariate and hot-deck imputation, are described in a technical report available from NCSA, *Imputation in the NASS General Estimates System* (Shelton, 1993).

Starting with 2010 data and continuing when CRSS replaced NASS GES, a different statistical procedure called imputation by sequential regression replaced the univariate and hot-deck imputation procedures. Imputation by sequential regression uses a software package called IVEware that was developed by the University of Michigan. In this procedure, covariates are selected automatically using the stepwise regression method before the unknown values are imputed. The only exception is vehicle body type, where its unknown values have been imputed by the univariate and hot-deck imputation procedures. As of 2020, vehicle body type is no longer being imputed. Table C1 below gives the reader the proportions of unknown values prior to imputation for variables with imputed values for 2022.

Table C1. Percentage of Unknowns for 2022 CRSS Data Elements

Crash Level			
Atmospheric Condition	3.5%	Light Condition	0.5%
Crash Severity	3.1%	Manner of Collision	0.2%
Day of Week	0.0%	Minute of Crash	0.9%
First Harmful Event	<0.1%	Relation to Junction—Specific Location	<0.1%
Hour of Crash	0.9%	Relation to Trafficway	<0.1%
Vehicle/Driver Level			
Initial Point of Impact	1.5%	Speed Limit	15.2%
Most Harmful Event	<0.1%	Traffic Control Device	15.8%
Roadway Surface Condition	9.5%		
Person Level			
Age	7.0%	Seating Position	1.5%
Injury Severity	4.5%	Sex	5.6%

Note: For some data elements, counts for the CRSS category "Not Reported" were combined with counts for "Unknown" in the frequencies above.

*Estimated reductions in deaths that resulted from the presence of laws establishing a minimum legal age of 21 years for the consumption of alcoholic beverages.

The table above presents estimates of the lives saved in 2017 and previous years (2018 to 2022 not available) by various protective devices or laws. The estimates were obtained by combining information from fatal traffic crashes with estimates of the effectiveness of each device or law in saving lives. For seat belts and motorcycle helmets, the table also estimates the numbers of additional lives that could have been saved if the devices had been used by more people.
