15. Supplementary Notes

Each crash represents a unique sequence of events, and generalized conclusions cannot be made concerning the crashworthiness performance of the involved vehicles or their safety systems. This report and associated case data are based on information available to the Special Crash Investigation team on the date this report was submitted.

16. Abstract

This on-site investigation documents the fatality of a 4-year-old child in a crash involving a 2018 Jeep Compass, a 2016 Chrysler 200, and a 2010 Subaru Forester in Illinois in October 2022. A belted 30-year-old female was driving the Jeep, and a 4-year-old female occupied the second-row-right seat in an all-in-one child restraint system that was used as a booster seat. The Chrysler was driven by a belted 20-year-old male. The Subaru was driven by a belted 32-year-old female. The Jeep struck the right side of the Chrysler. The Subaru was then struck by the Chrysler after the initial impact. The 4-year-old child was pronounced deceased after being transported to the hospital. The Jeep driver was flown to a Level I trauma center and hospitalized with serious injuries. The Chrysler driver sustained police-reported incapacitating injuries and was transported to a hospital. The Subaru driver sustained police-reported non-incapacitating injuries and refused transport.

Special Crash Investigations
On-Site Child Restraint System Crash Investigation
SCI Case No: CR22015
Vehicle: 2018 Jeep Compass
Location: Illinois
Crash Date: October 2022

Background

This report documents the on-site investigation of a fatality of a 4-year-old child from a front-to-side impact crash of a 2018 Jeep Compass (Figure 1), a 2016 Chrysler 200 (Figure 2), and a 2010 Subaru Forester. A 4-year-old female was seated in the second-row-right seat of the Jeep in an all-in-one child restraint system (CRS) that was used as a booster seat. The child was restrained by the three-point lap and shoulder belt while the CRS was secured to the seat by the Lower Anchors and Tether for Children (LATCH) system. The Jeep was driven by a belted 30-year-old female. The Jeep driver was a belted 30-year-old female; the Chrysler driver was a belted 20-year-old male, and the Subaru driver was a belted 32-year-old female.

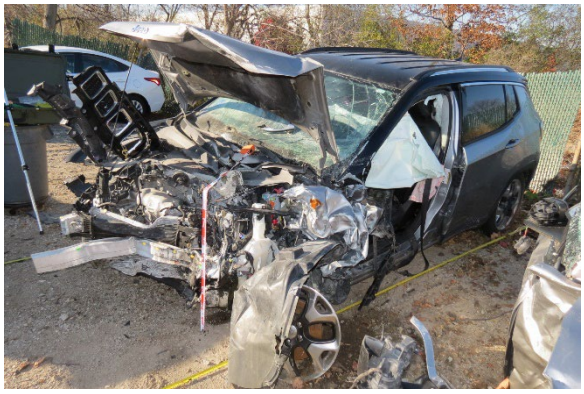

Figure 1. 2018 Jeep Compass

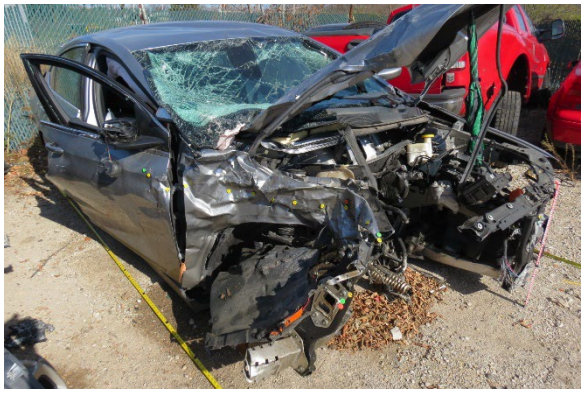

Figure 2. 2016 Chrysler 200

The crash was identified by the National Highway Traffic Safety Administration in October 2022 and an investigation of the crash was assigned to the Special Crash Investigations (SCI) team at Crash Research & Analysis, Inc., in the same month. Of special interest to the investigation was the role played by the child restraint system used as a booster seat for the 4-year-old child. The investigating police agency was contacted in October 2022 and authorized inspection for the Jeep and Chrysler, the CRS, and crash scene that were completed in November 2022. The Subaru was not inspected. The crash occurred in the westbound lane of a two-lane, undivided State highway.

The Jeep was traveling west followed by the Subaru at an unknown distance. The Chrysler was traveling east and crossed the centerline. The front of the Jeep struck the right side of the Chrysler (Event 1). The Jeep was redirected to the northwest, off the roadway and down an embankment where it came to rest facing west. The impact caused a minor fire in the Jeep's engine compartment (Event 2). The Chrysler continued east after the impact and its front right corner struck the Subaru (Event 3). The Chrysler came to rest in the westbound lane, facing

northeast. The Subaru was redirected off the south side of the roadway and down an embankment where it came to rest facing southwest.

The Jeep's 4-year-old passenger sustained critical injuries and was transported by ambulance to a Level II trauma center, then flown to a Level I pediatric trauma center where she was hospitalized. She expired 1 day later. The driver sustained serious AIS-3 injuries and was flown to a Level I trauma center where she was hospitalized for 19 days. The Chrysler driver sustained police-reported A-level (incapacitating) injuries and was flown to a trauma center where he was hospitalized for 19 days. The Subaru driver sustained police-reported B-level (non-incapacitating) injuries and refused transport.

On-site investigation included documentation and measurement of the Jeep's exterior and interior damage, identification of occupant contact points, assessment of its manual and supplemental restraint systems, and the inspection of the CRS. The Chrysler was inspected to document its exterior damage. Both vehicle event data recorders (EDR) were imaged using the Bosch Crash Data Retrieval (CDR) tool. Additional investigation included documentation of the crash site's physical environment using photographs and a total station mapping system.

Crash Summary

Crash Site

The crash occurred at dusk in the westbound lane of a two-lane, unlit State highway. According to a local weather report, environmental conditions were clear, a temperature of 9 °C (48 °F) with 10 km/h (6 mph) wind from the north. The undivided roadway ran in a general east/west direction with one through lane in each direction. The roadway was straight, level, bituminous, and each lane measured 3.5 m (11.5 ft) wide. Roadway markings had solid white edge lines and a solid/dashed yellow center line that showed no passing for eastbound traffic. There were also rumble strips on both paved shoulders at the edge lines and along the center line. The posted speed limit was 89 km/h (55 mph).

Pre-Crash

The Jeep was traveling west in the westbound lane (Figure 3) at an EDR-reported speed of 91 km/h (57 mph) at 5 seconds prior to algorithm enable (AE). The Subaru was also traveling west at an unknown distance behind the Jeep. The Chrysler was traveling in the eastbound lane at an EDR-reported speed of 124 km/h (77 mph) at 5 seconds prior to AE. The Subaru driver told police that the Chrysler was traveling erratically and, "…looked like the vehicle had lost control as it appeared the vehicle was fish-tailing and crossing into oncoming traffic" (Figure 4). The Chrysler's EDR steering data showed that prior to impact, the Chrysler drifted left, and the driver steered right, then overcorrected back to the left, causing the vehicle to rotate counterclockwise into the westbound lane. The Jeep's EDR showed the driver steered right and braked while yawing counterclockwise at a recorded speed of 81 km/h (50 mph) immediately prior to the crash.

Figure 3. West view, Jeep's approach to impact

Figure 4. East view, yellow line shows Chrysler's travel path to impact

Crash

The front plane of the Jeep struck the right front fender of the Chrysler (Event 1). The force direction on the Jeep was in the 11 o'clock sector and resulted in deployment of the Jeep driver's frontal and knee air bags, the left outboard seat-mounted side air bag, and the left inflatable curtain (IC) air bag. The impact redirected the Jeep off the north side of the roadway and down an embankment, negatively graded 29 percent. The Jeep came to rest at the bottom of the embankment, facing west. The impact caused a minor fire in the engine compartment (Event 2).

The force of the crash separated the Chrysler's engine and transaxle and caused the vehicle to rotate rapidly counterclockwise, as it continued east. Its front plane struck the right side of the Subaru (Event 3). The Chrysler slid to rest in the westbound lane facing northeast, approximately 18 m (59 ft) from initial impact. Figure 5 shows the rest positions of the Jeep and Chrysler. The impact with the Chrysler redirected the Subaru off the south side of the roadway and down an embankment. It came to rest at the bottom of the embankment facing southwest.

Figure 5. West view, rest positions of the Jeep (bystander provided image)

Post-Crash

The police were notified of the crash and rescue personnel responded. According to the investigating officer, an off-duty paramedic gave a knife to a bystander to cut the LATCH system on the CRS and the vehicle's three-point lap and shoulder belt system. The child was still in the CRS when removed from the vehicle. Once taken out of the CRS, the child was transported by ambulance to a Level II trauma center. She was then flown to a Level I pediatric trauma center where she expired 1 day later. The Jeep's driver sustained serious AIS-3 injuries and was flown to a Level I trauma center where she was hospitalized for 19 days. The Chrysler driver sustained police-reported A-level (incapacitating) injuries and was transported to a hospital by ambulance. The Subaru driver sustained police-reported B-level (non-incapacitating) injuries and refused transport. All vehicles were towed due to damage.

2018 Jeep Compass

Description

The Jeep was a 4-wheel drive, 5-passenger, 4-door SUV manufactured in December 2017 with Vehicle Identification Number 3C4NJDCB9JTxxxxxx. It was powered by a 2.4 liter, 4-cylinder engine with 4-wheel antilock brakes, and stability and traction control. The Jeep also had front seat belt pretensioners, dual-stage frontal air bags, a driver's knee air bag, front outboard seatback-mounted side impact air bags, and IC air bags. The vehicle's wheelbase was 262 cm (103.1 in).

The manufacturer's recommended tire size was P225/55R18. At the time of the crash, the Jeep had a Mohave Crossover CUV tire on the left front wheel, and Performer CXV Sport tires on the other three wheels. All tires were of the recommended size and in good condition prior to the crash.

The front row had leather bucket seats with adjustable head restraints. The driver's seatback was reclined 20° aft of vertical and the bottom of the head restraint was adjusted 3 cm (1.2 in) above the top of the seatback. The seat track position could not be determined due to damage. The second row had a leather three-passenger bench seat with folding backs and adjustable head restraints. LATCH anchors were available in the outboard seat positions of the second row. The distance between the anchors at each outboard position was 28 cm (11.0 in).

Exterior Damage

The front plane of the Jeep (Figure 6) was damaged during impact with the Chrysler (Event 1). Direct damage began at the left front bumper corner and extended 71cm (28.0 in) to the right. The combined width of the damage extended across the entire end-width of the Jeep. The Field L measured 80 cm (31.5 in). The maximum residual crush was 51 cm (20.1 in) and was located 45 cm (17.7 in) left of the center line. The residual crush measurements were C1 = 50 cm (19.7 in), C2 = 51 cm (20.1 in), C3 = 45 cm (17.7 in), C4 = 34 cm (13.4 in), C5 = 19 cm (7.5 in), C6 = 6 cm (2.4 in). The right aspect of the bumper beam separated from its mounting point to the frame. The damage algorithm of the WinSMASH program calculated the Jeep's total delta V as 39 km/h (24.2 mph). The longitudinal and lateral velocity changes were -36 km/h (-22.4 mph) and 13 km/h (8.1 mph). The crash configuration fit the parameters of the collision model; however, the results were considered low. The delta Vs reported by the EDR were a better representation of the crash severity based on SCI field experience. Refer the Event Data Recorder section below. The collision deformation classification[1] (CDC) for this damage pattern was 11FYEW3 (340°).

During the crash sequence a small fire ignited in the left side of the engine compartment (Event 3). It is unknown how this fire was extinguished.

[1] SAE J224_202205 SAE recommended practice describing vehicle collision damage in an alphanumeric format.

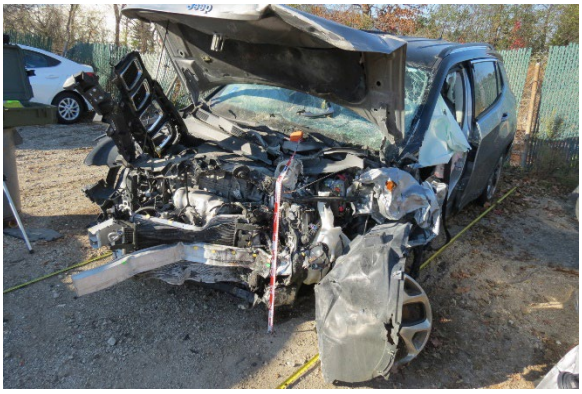

Figure 6.Front-plane damage to Jeep

Event Data Recorder

The Jeep's EDR was imaged with version 23.0.1 of the Bosch CDR software and reported with version 23.0.2. The investigating police department had removed the EDR module from the vehicle and SCI imaging took place via a bench top direct to module connection at police headquarters. The EDR report is included at the end of this report in Appendix A.

The data limitations stated that an event will be stored when the delta V is approximately 8 km/h 5 mph or greater in a 150 msec interval. The EDR could store up to three events. The Jeep's EDR recorded a "most recent event (deployment)," defined as, "Data of the most recent event is displayed in the report."

The EDR reported 17 data trouble codes (DTC); most regarded communication issues with the occupant classification module (OCM) in the right front seat. The DTCs are listed below:

Data Trouble Code	Issue
B223D-00	OCM issue for right-front seat, needs calibration
U0154-00	Lost communication between OCM and other modules
B0052-13	Right-front passenger seat belt sensor circuit open
B0050-13	Left-front buckle switch circuit open
B00C5-13	Right-front seat track position sensor circuit open
B00B5-13	Left-front seat track position sensor circuit open
B0028-13	Right-front seat-mounted air bag deployment squib 1…circuit open
B0020-13	Left-front seat-mounted air bag deployment squib 1…circuit open
B0095-13	Right frontal acceleration sensor circuit open
B0090-13	Left frontal acceleration sensor circuit open
B0002-13	Driver frontal squib 2…circuit open
B0001-13	Driver frontal squib 1…circuit open

Data Trouble Code	Issue
U0100-00	Lost communication with ECM/PCM
B222D-00	Unknown
B00DF-95	Issue with right-front restraints disable switch
B2734-13	Passenger presence detector sensor…circuit open
B1BA5-00	Air bag squib configuration mismatch

System Status at Deployment: The frontal air bag warning lamp was reported as "Off," and the recorded file was complete. The deployment event was recorded during the Jeep's impact with the Chrysler. The driver's buckle switch was reported as "Buckled." The maximum longitudinal and lateral delta Vs were reported as -70 km/h (-43.5 mph) and 25 km/h (15.5 mph). These values occurred at 224 and 44 msec after AE. The EDR further reported the first and second stages of the driver's frontal air bag deployed 11 and 16 msec after AE. The first and second stages of the right frontal air bag deployed at 11 and 161 msec after AE. The EDR also reported deployments of the driver's knee air bag, retractor and anchor pretensioner actuations for both front seat belts, the driver's left seat-mounted and IC air bags, but no deployment times were given.

Interior Damage

The interior of the Jeep sustained moderate intrusion damage to the occupant compartment from the impact with the Chrysler. Among the intruded components were the left toe pan, and left instrument panel that intruded longitudinally 14 cm (5.5 in) and 6 cm (2.4 in). The transmission tunnel at the accelerator intruded laterally 10 cm (3.9 in). The left front seat cushion was displaced laterally to the left 8 cm (3.1 in) and deformed vertically. The driver's torso loaded the steering wheel rim and column, through the deployed driver air bag, displacing it forward and upward. A probable right knee contact was noted to the knee bolster right of the steering column. In the second row a scuff/deformation of the seat back of the right front was observed from possible foot contact from the child passenger.

Manual Restraint Systems

The front row had continuous loop, three-point lap and shoulder seat belts with sliding latch plates, retractor and anchor pretensioners, and adjustable upper anchors. The driver's upper anchor was adjusted to the full-down position. The driver's seat belt had an emergency locking retractor (ELR) and the remainder of the seats had switchable ELR/automatic locking retractors (ALR). The driver's retractor and anchor pretensioners actuated during the crash.

The driver was restrained by the lap and shoulder seat belt as evidenced by load abrasions on the latch plate belt guide and D-ring as well as a 24 cm (9.4 in) friction load mark from the D-ring on the belt webbing, 198 cm (78.0 in) from the floor anchor. The length of belt webbing extended from the locked retractor consistent with usage.

The second row three-point seat belts were continuous loop with sliding latch plates and fixed D-rings. The second-row-right CRS was secured to the vehicle by the lower anchors and top tether straps. The child was restrained by the vehicle's three-point lap and shoulder belt. She was sitting on the internal harness system (it was not in use to restrain the child). The vehicle's belt webbing was cut during the rescue effort, 24 cm (9.4 in) from the floor anchor and 6 cm (2.4 in) from the D-ring (Figure 7). Heavy load abrasions were noted on the latch plate belt guide (Figure 8). A 25 cm (9.8 in) section and a 15 cm (5.9 in) section of the belt webbing was stretched and abraded from loading the sides of the CRS. These abraded sections were located 38 cm (15.0 in) and 90 cm (35.4 in) from the floor anchor.

Figure 7. Second-row-right seat stretched and abraded- seat-belt-webbing

Figure 8. Load marks on latch plate belt guide, second-row-right seat

Supplemental Restraint Systems

The Jeep had dual-stage frontal air bags, a driver's knee air bag, front row outboard seat-mounted side impact air bags, and IC air bags. Both frontal air bags, the knee air bag, the left seat-mounted, and IC air bags deployed during the crash.

The driver's frontal air bag was located in the steering wheel hub. The deflated air bag was 60 cm (23.6 in) in diameter and there was no damage or discernable evidence of occupant contact. The module cover was a two-flap configuration constructed of pliable vinyl with a horizontal tear seam. Each flap was 13 cm (5.1 in) at its widest point and 7 cm (2.8 in) wide at its narrowest. Each flap measured 8 cm (3.1 in) in height. There was no damage or discernable evidence of occupant contact to the cover flaps.

The driver's knee air bag was located behind the left knee bolster. The deflated air bag was 60 cm (23.6 in) wide at the top, 43 cm (16.9 in) wide at its base, and 46 cm (18.1 in) in depth. No damage or discernable occupant contact was noted on the air bag.

The driver's outboard seat-mounted side impact air bag was located in the left outboard seatback and deployed through a vertical tear seam. The deflated air bag was 60 cm (23.6 in) in height and 27 cm (10.6 in) wide. There was no damage or discernable occupant contacts to the air bag.

The driver's IC air bag was located in the roof side rail and deployed through a seam in the headliner. The air bag was 188 cm (74.0 in) long and 38 cm (15.0) in height. It was cut vertically by rescue personnel near the B-pillar to facilitate extrication of the driver. No damage or discernable occupant contact were noted on the air bag.

Second-Row-Right Passenger's Child Restraint System

The 4-year-old child was seated in a Dorel Juvenile Group, Safety 1st Grow and Go Sprint All-in-One CRS (Figure 9), model number: CC226-FAR, manufactured on January 25, 2019. The CRS was used as a belt positioning booster at the time of the crash and had a one-piece plastic shell with a non-detachable base that let the back support recline with a 1 cm (0.4 in) thick band of Styrofoam padding that lined the head area, and a 1 cm (0.4 in) thick poly cover. Attached to the plastic shell were detachable armrest covers and an inner red plastic backing on the back support that had two sets of slots where the shoulder straps could be routed. The shoulder straps were routed through the top set of slots and anchored to a horizontal attachment bar in the back of the CRS. The height of the shoulder straps could be further adjusted by setting the horizontal bar to one of five different levels. The adjustment could be made by operating the vertical levers that rose above the seatback of the CRS. The shoulder strap attachment bar was set in the second slot from the lowest level.

Figure 9. Front of CRS with cover/padding in place

The CRS could be used in either forward-facing or rear-facing modes, using the internal 5-point harness. Installation of this CRS could be achieved by using the LATCH system or the vehicle's three-point lap and shoulder belt system routed through the appropriate belt path. The third option let the CRS be used as a belt-positioning booster seat, using just the lap and shoulder seat belt system. The CRS' back support could be adjusted to three different recline positions, the most being 50° aft of vertical. At the time of SCI inspection, the back support was adjusted to

Position 1, the most upright position at 20° aft of vertical. This was the correct position for booster mode.

The CRS manufacturer's recommendations were displayed on labeling on the side surface of the CRS shell that were as follows.

Forward–facing with internal harness

- 10.1–29 kg (22–65 lb)
- 73.6–125 cm (29–49 in)
- At least 1-year-old

Recommended CRS installation to the vehicle when used as a forward-facing CRS

- Lower anchor belt with tether (LATCH)
  - Do not use lower anchor strap for children weighing over 18 kg (40 lb)
- Lap belt with tether up to 29 kg (65 lb)
- Lap and shoulder belt with tether up to 29 kg (65 lb)
- Tether recommended in forward-facing position whether lower anchor strap or vehicle's seat belt is in use

The manufacturer's size parameters for usage as a belt-positioning booster seat

Weight: 18.1 kg–45.4 kg (40–100 lb)

Height: 110.1 cm–132.1 cm (43–52 in)

- Use with the vehicle's lap and shoulder belt only (lower anchor strap should not be used and removed from CRS)
- Do not use with lap belt only
- CRS internal harness should be removed

The SCI inspection revealed the internal five-point harness system was intact. The buckle and chest retainer clip were in good working order. The harness webbings were significantly twisted, the left strap more than the right. At the time of the crash the CRS was installed in booster mode and secured to the vehicle by the lower anchors and top tether. The child was restrained by the vehicle's lap and shoulder belt. The lap portion of the seat belt was routed through the CRS' U-shaped belt channel and the shoulder portion was routed over the chest of the child. It is unknown if the shoulder belt was routed through the CRS's positioning guide on the seatback of the CRS at the time of the crash.

The child's weight was reported as 21 kg (47 lb) and was beyond the manufacturer's weight limit for use with LATCH. She was in the manufacturer's recommended weight for use as a belt-positioning booster seat. The child's reported height was 99 cm (39 in) and was below the manufacturer's recommended height of 110.1 cm (43 in) for use as a booster seat. Based on her height and weight and the CRS manufacturer's recommendations, the 4-year-old should have been restrained in the CRS in a forward-facing position by the integrated 5-point harness system with the CRS secured by the vehicle's three-point lap and shoulder belt system routed through the forward-facing belt path.

The lower anchor strap and top tether and the vehicle's three-point lap and shoulder belt webbing were cut by first responder/bystander. No load marks were noted on the latch anchors, the straps or top tether webbing. The CRS remained intact during the crash, although there were stress marks noted on the front of the seat and behind the interior belt routing channels (Figure 10). These stress marks occurred as the shell of the CRS flexed under load during impact. Abrasions from the seat belt webbing were present on the right-side belt channel, but heavier abrasions on the left side belt channel (Figure 11). These occurred as the child and CRS loaded forward against the vehicle's lap belt webbing.

Figure 10. Stress marks, behind routing channel, interior left side of CRS

Figure 11. Left belt guide abrasions from webbing

Driver Demographics

Age/sex:	30 years/female
Height:	163 cm (64 in)
Weight:	84 kg (185 lb)
Eyewear	Unknown
Seat type:	Forward-facing bucket seat with adjustable head restraint
Seat track:	Unknown
Manual restraint usage:	Lap and shoulder belt
Usage source:	Vehicle inspection, EDR, police crash report
Air bags:	Frontal, knee bolster, seat-mounted, and IC bags available; all deployed
Alcohol/drug involvement:	No alcohol or drugs
Egress from vehicle:	Removed from vehicle due to perceived serious injuries
Transport from scene:	Air ambulance
Type of medical treatment:	Level 1 trauma center; hospitalized for 19 days

Driver Injuries

Inj. No.	Injury	Injury Severity AIS 2015	Involved Physical Components (IPC)	IPC Confidence Level
1	Right femur shaft fracture, comminuted, intra-articular	853271.3	Tandem IPC Primary: Left air bag – Left bottom instrument panel Secondary: Front – Left lower instrument panel (includes knee bolster)	 Possible Certain
2	Left femur shaft fracture, transverse	853251.3	Tandem IPC Primary: Left air bag – Left bottom instrument panel Secondary: Front – Left lower instrument panel (includes knee bolster)	 Possible Certain
3	Right patella fracture, open, with disruption of extensor mechanism and retinacular tear on right	854572.2	Isolated Front – Left lower instrument panel (includes knee bolster)	Certain

Source: Hospital record

Driver Kinematics

The driver was seated upright and restrained by the three-point lap and shoulder seat belt system. The seat track adjustment could not be determined, and the seatback was reclined to 20° aft of vertical. The bottom of the driver's head restraint was adjusted 3 cm (1.2 in) above the top of the seatback. The (Event 1) impact with the Chrysler actuated the retractor and anchor pretensioners and deployed the driver's frontal, knee, left seatback, and IC air bags. In response to the 11 o'clock direction of force, the driver initiated a forward and slightly left trajectory. She loaded the seat belt webbing, frontal air bag, and steering assembly with her torso and face. The driver sustained seat belt-related soft tissue injuries of the abdomen, left hip, and groin. Her loading of the seat belt resulted in several transverse process fractures of the lumbar spine. Her face/head loaded the air bag/steering assembly that caused an unspecified closed head injury with loss of consciousness.

The driver's knees contacted and loaded through the deployed knee air bag into the knee bolster/lower instrument panel. As a result, she sustained bilateral femur fractures and an open right patella fracture with an avulsed tendon. Her right hand probably separated from the steering wheel rim at impact, and she contacted the center instrument panel, sustaining fractures of the right distal radius and lunate facet.

Emergency responders removed the driver from the vehicle and she was flown to a Level 1 trauma center where she was hospitalized for 19 days.

Second-Row-Right Passenger Demographics

Age/sex:	4 years/female
Height:	99 cm (39 in)
Weight:	21 kg (47 lb)
Eyewear:	Unknown
Seat type:	Bench with folding back(s)
Seat track position:	Fixed
Manual restraint use:	Lap and shoulder belt with CRS
Usage source:	Vehicle inspection
Air bags:	IC bag available; not deployed
Egress from vehicle:	Removed by rescue personnel/bystander
Transport from scene:	Transported by ambulance to a Level II trauma center; then transferred by helicopter to a Level I pediatric trauma center
Type of medical treatment:	Hospitalized for 1 day, then expired

Second-Row-Right Passenger Injuries

Inj. No.	Injury	Injury Severity AIS 2015	Involved Physical Components (IPC)	IPC Confidence Level
1	Cerebellar tonsillar herniation	140202.5	Isolated IPC Interior - Shoulder portion of belt restraint	Probable
2	Cerebral brain edema; global effacement of cisterns and 3rd and 4th ventricles	140672.4	Isolated IPC Interior - Shoulder portion of belt restraint	Probable
3	Right hemopneumothorax with 300 cc of blood in lung	442206.5	Isolated IPC Interior - Shoulder portion of belt restraint	Certain
4	Left hemopneumothorax with 300 cc of blood in lung	442206.5	Isolated IPC Interior - Shoulder portion of belt restraint	Certain
5	Traumatic aortic injury with pseudoaneurysm in region of aortic isthmus	420210.5	Isolated IPC Interior – Shoulder portion of belt restraint	Certain
6	Bilateral pulmonary contusions with partial collapse of both lower lobes; mild herniation of right lung	441412.4	Isolated IPC Interior – Shoulder portion of belt restraint	Certain

Inj. No.	Injury	Injury Severity AIS 2015	Involved Physical Components (IPC)	IPC Confidence Level
7	Hemomediastinum, posterior	442208.2	Isolated IPC Interior – Shoulder portion of belt restraint	Certain
8	Pneumomediastinum, posterior	442209.2	Isolated IPC Interior – Shoulder portion of belt restraint	Certain
9	Significant distraction injury of thoracic spine at level of T2-T3	610400.3	Isolated IPC Interior – Shoulder portion of belt restraint	Probable
10	T3 vertebral body fracture, posterior aspect	650430.2	Isolated IPC Interior – Shoulder portion of belt restraint	Probable
11	Comminuted fractures of bilateral iliac bones	856151.2	Isolated IPC Interior – Lap portion of belt restraint	Certain
12	Left tibia fracture, NFS	854000.2	Isolated Interior – Other seating position seatback	Probable
13	Left fibula fracture, NFS	854441.2	Isolated Interior – Other seating position seatback	Probable
14	Scattered ecchymosis to lips	210402.1	Isolated Interior – Same occupant contact (specify): Head to thigh	Probable
15	Right forehead has 2.5 x 1.0-inch area of vertical curvilinear abrasions	210202.1	Isolated Interior – Same occupant contact (specify): Head to thigh	Probable
16	0.1-inch abrasion on right side of nose	210202.1	Isolated Interior – Same occupant contact (specify): Head to thigh	Probable

Inj. No.	Injury	Injury Severity AIS 2015	Involved Physical Components (IPC)	IPC Confidence Level
17	0.25 x 0.1-inch abrasion on chin	210202.1	Isolated Interior – Same occupant contact (specify): Head to thigh	Probable
18	Large right abdominal wall hematoma with active extravasation in region of right rectus muscle	510402.1	Isolated Interior – Lap portion of belt restraint	Certain
19	8.0 x 2.0 inch are of band-like abrasions on right lower quadrant of abdomen	510202.1	Isolated Interior – Lap portion of belt restraint	Certain
20	1.5 x 1.0-inch area of abrasion on labia	545699.1	Isolated Interior – Child safety seat harness system (i.e., straps, retainer clip, latch plate, buckle)	Probable
21	Left hip abrasion	810202.1	Isolated Interior – Lap portion of belt restraint	Certain
22	Anterolateral aspect of left thigh has 1.5 x 0.5-inch abrasion	810202.1	Isolated Interior – Lap portion of belt restraint	Certain

Source: Hospital records and autopsy

Second-Row-Right Passenger Kinematics

The 4-year-old child was seated in the CRS that was used as a belt-positioning booster seat. The CRS was secured to the seat by LATCH. The child was restrained by with the three-point lap and shoulder seat belt system. It should be noted that the child was above the CRS manufacturer's recommended weight limit for LATCH and was below the recommended height for use as a booster seat. Therefore, she should have been restrained by the internal 5-point harness system of the CRS and the CRS should have been restrained by the vehicle's lap and shoulder belt system.

In response to the 11 o'clock impact force from the Event 1 crash, the child was displaced forward and slightly left. She loaded the vehicle's lap and shoulder belt with her pelvic and thoracic regions. Frictional abrasions were present of the belt channel of the shell of the CRS with heavy load-induced abrasion of the polymer surface of the latch plate. Her loading of the belt webbing resulted in soft tissue abrasions of the left hip and thigh with band-like abrasions of the right lower quadrant of the abdomen and a large hematoma of the right abdominal wall.

Additionally, she sustained comminuted fractures of the bilateral iliac bones. As she moved forward in the CRS, her groin area slid over the buckle for the integrated harness system causing an abrasion of the labia.

The child continued loading the shoulder belt webbing resulting in bilateral hemopneumothorax and pulmonary contusions with a partial collapse of the lower lobes, a traumatic aortic injury, posterior hemomediastinum and pneumomediastinum, a distraction injury of the thoracic spine at the level of T2-T3, and a T3 vertebral body fracture.

As the shoulder belt restrained the child's torso, her head accelerated forward causing cerebellar tonsillar herniation with cerebral edema and effacement of the cisterns at the 3rd and 4th ventricles. Her head jackknifed forward as her lower extremities probably elevated due to the severe crash forces and the seat belt loading. Her face contacted her thighs causing soft tissues ecchymosis to her lips and abrasions of her forehead, nose, and chin.

The child sustained left tibia/fibula fractures from probable contact with the right front seatback. An area of suspected contact was present on the seatback. At the time of the SCI inspection, the right front seat was readjusted forward probably due in part to the removal of the child and CRS from the vehicle post-crash.

First responders and bystanders cut the lower anchor and tether straps, and three-point seat belt webbing to remove the CRS and the child from the vehicle. She was transported by ambulance to a Level II trauma center, then transferred by helicopter to a Level 1 pediatric trauma center where she was hospitalized. She was pronounced deceased 1 day later.

2016 Chrysler 200

Description

The Chrysler was a front-wheel-drive, five-occupant, 4-door sedan manufactured in October 2015 with the VIN 1C3CCCAB2GNxxxxxx. It had a 2.4 liter, 4-cylinder engine on a 275 cm (108.3 in) wheelbase. The Chrysler had dual frontal air bags, front outboard seat-mounted side air bags, and IC air bags. All air bags deployed as a result of the crash.

Exterior Damage

The right plane of the Chrysler (Figure 12) was damaged during impact with the Jeep. The crash sequence separated the engine and transaxle from the vehicle, and it was found at the bottom of the embankment on the south roadside. The direct damage began 219 cm (86.2 in) forward of the right rear axle and extended forward 105 cm (41.3 in). The Field L was 105 cm (41.3 in). The crush measurements were taken on the right fender and door at the upper door level. The maximum residual crush was 37 cm (14.6 in) that occurred 303 cm (119.3 in) forward of the right rear axle. The crush values were C1 = 6 cm (2.4 in), C2 = 6 cm (2.4 in), C3 = 26 cm (10.2 in), C4 = 33 (13.0 in), C5 = 37 cm (14.6 in), C6 = 19 cm (7.5 in). The damage algorithm of the WinSMASH program calculated the total delta V as 39 km/h (24.2 mph). The longitudinal and lateral velocity changes were -34 km/h (-21.1 mph) and -20 km/h (-12.4 mph). The results were low. The CDC for this damage pattern was 01RYEW3 (40°).

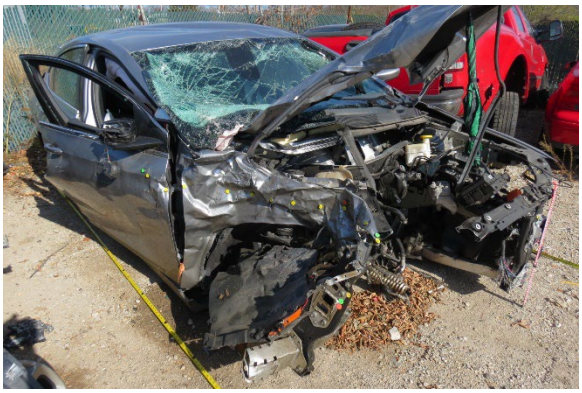

Figure 12. Front/right of Chrysler

The front right corner of the Chrysler was further damaged during impact with the right side of the Subaru (Event 3). This damage overlapped the initial impact damage with the Jeep. The CDC for this damage was 99F9E999. Based on the on-scene photographs taken by a bystander of the Subaru and its minor severity sideswipe type damage, the extent of the overlapping damage to the Chrysler was minor.

Event Data Recorder

The Chrysler's EDR was imaged with version 23.0.1 of the Bosch CDR software and reported with version 23.1. The investigating police department had removed the EDR module and SCI imaging took place via a bench top direct to module connection at police headquarters. The EDR report is included in Appendix B.

The data limitations stated that an event will be stored when the delta V is approximately 5 mph (8 km/h) or greater in a 150 msec interval. The EDR could store up to three events. The EDR Chrysler's EDR reported a "most recent event (deployment), defined as, "Data of the most recent event is displayed in the report."

System Status at Deployment: The deployment event was recorded during the Chrysler's impact with the Jeep. The frontal air bag warning lamp was reported as "Off," no DTCs were reported, and the recorded file was complete. The driver's buckle switch was reported as "Buckled." The maximum longitudinal and lateral delta Vs were reported as -97 km/h (-60.3 mph) and -72 km/h (-44.7 mph). These values occurred 298 and 54 msec after AE. The EDR further reported the first and second stages and the third squib of the driver's frontal air bag deployed 17, 37, and 167 msec after AE. The first and second stages of the passenger's frontal air bag deployed at 17 and 167 msec after AE. The third squib of this air bag deployed at 37 msec after AE. The EDR also reported deployments of the driver's and passenger's knee air bags, both seat-mounted air bags, and both IC air bags but no deployment times were given. Actuations for the retractor and anchor pretensioners were reported, but no times were given.

Chrysler Occupant Information

The Chrysler driver was a belted 20-year-old male. He sustained police-reported A-level injuries and was transported by ambulance to a hospital. His specific injury and treatment information is unknown.

2010 Subaru Forester

The Subaru was an all-wheel drive, 4-door, 5-passenger wagon with the VIN JF2SH6BC7AGxxxxxx. The vehicle had a 2.5 liter, 4-cylinder engine on a 262 cm (103.1 in) wheelbase. The Subaru had dual frontal air bags and IC air bags. Based on photography taken by a bystander on scene, none of the Subaru's air bags deployed.

Exterior Damage

Based on the police crash report and the bystander's photographs (Figure 13), the right side of the Subaru sustained side-swiping type damage due to contact with the front-right corner of the Chrysler.

Figure 13. East-facing view of the Subaru at final rest (bystander provided image).

Subaru Occupant Information

The Subaru driver was a belted 32-year-old female. She sustained police reported B-level injuries and refused transport to a medical facility. Her specific injury and treatment information are unknown.

Appendix A: 2018 Jeep Compass Event Data Recorder Report

The EDR report in this technical report was imaged using the current version of the Bosch CDR software at the time of the vehicle inspection. The CDR report in the associated Crash Viewer application may differ relative to this report.

IMPORTANT NOTICE: Robert Bosch LLC and the manufacturers whose vehicles are accessible using the CDR System urge end users to use the latest production release of the Crash Data Retrieval system software when viewing, printing or exporting any retrieved data from within the CDR program. Using the latest version of the CDR software is the best way to ensure that retrieved data has been translated using the most current information provided by the manufacturers of the vehicles supported by this product.

Data Limitations

AIRBAG CONTROL MODULE (ACM) DATA LIMITATIONS:

GENERAL INFORMATION:

CAUTION: During direct-to-module imaging where the Airbag Control Module (ACM) is disconnected and removed from a vehicle, make sure the ACM is not moved, tilted or turned over while connected to and powered by the CDR Interface Module (with appropriate adaptors in place, where required). Also, after a CDR imaging process, wait 2 minutes after power is removed from the ACM before attempting to move the module. Not following these general ACM guidelines for direct-to-module imaging may cause new events to be recorded in the ACM.

- For additional definitions, please refer to the CDR Help File Glossary.
- As the VIN may be used to determine the configuration of the restraint system, it is imperative that the correct VIN be entered into the CDR Tool during the imaging process.
- If a DLC adapter has to be used with the CDR Tool, the "Read VIN from Vehicle" feature in the CDR Tool will not work. The VIN will have to be manually entered.
- If a 2021 or later MY Dodge Durango was imaged with a CDR Tool version 19.4 or older, the ACM will need to be reimaged as not all the peripheral sensor data will have been retrieved.
- The 2019 MY RAM 1500 may take up to 30 minutes to retrieve the EDR data. The ignition will time out within 20 minutes so the vehicle flashers must be turned on within 20 minutes to keep the ignition and communication bus active.
- Lateral Delta V will not be displayed for the 2013 MY Jeep Compass and Patriot.
- Ignition Cycle, download/crash
    - For RAMs and Dodge Vipers, there are 2 internal ignition counters in the ACM. It is possible for the ignition cycles at download to be different than the ignition cycles at event due to the 2 different counters.
    - Note that the ignition cycle count in an ACM may differ from the ignition cycle count in a Pedestrian Protection Module (PPM) in the same vehicle due to the fact that the ACM has an energy reserve while the PPM does not.

The following table provides an explanation of the sign notation for data elements that may be included in this CDR report. All directional references to sign notation are from the perspective of the driver when seated in the vehicle facing the direction of forward vehicle travel.

Data Element Name	Positive Sign Notation Indicates
Delta-V, Longitudinal	Forward
Maximum Delta-V, Longitudinal	Forward
Delta-V, Lateral	Left to Right
Maximum Delta-V, Lateral	Left to Right
Angular Rate	Clockwise rotation around the longitudinal axis
Peripheral Sensors, X and Y	Outside to Inside
Pressure Sensors	Compression of air

Internal Y Acceleration	Left to Right
Low-g Z Acceleration	Downward
Steering Input	Steering wheel turned counter clockwise
Yaw Rate	Counter clockwise rotation

CDR FILE INFORMATION:

- An event will be stored when the delta V is approximately 5 mph (8 km/h) or greater within a 150 ms interval.
- For non-NAFTA ACMs that control pedestrian protection devices, a non-deployment event will be stored when the pedestrian protection devices are activated.
- A non-deployment event may be stored with activation of the Active Head Restraints. See AHR explanation under System Configuration at Retrieval/Event section.
- A deployment event may be stored in a 2019 MY+ Ram 3500 as the result of a rear impact, even though the Ram 3500 does not deploy any restraint system devices in a rear impact.

Event(s) Recovered definitions:
- None - There are no stored events in the ACM
- Not Retrievable - Event Data may be stored in the ACM but is not retrievable by the CDR Tool.
- Most Recent Event - Data of the most recent event is displayed in the report
- 1st Prior Event - Two events are stored in the ACM, Data displayed is of the first prior event.
- 2nd Prior Event - Three events are stored in the ACM, Data displayed is of the second prior event.
- For 2013 and 2014 MY Dodge Journey and Fiat Freemont:
    - Event Record 1 - Data from an event is stored in the ACM (not necessarily in chronological order)
    - Event Record 2 - Data from another event is stored in the ACM (not necessarily in chronological order)
- For TRW modules:
- If there is a side impact, two EDR events may be stored for the one side impact event. The second event may be recorded due to the Lateral Delta V exceeding 5 mph (8 km/h) within a 150 ms interval after the side deployment occurred.
- For some Fiat vehicles:
    - Two EDR events may be stored for one impact event. The second event may be recorded due to the deployment of the frontal airbag, 3rd stage passenger.
- During an event, if power to the ACM is lost, all or part of the event data record may not be recorded. An indication may be observed in the recorded data under this condition: The restraint data is recorded first and then the vehicle data.
    - "None" may be displayed in the "Event(s) Recovered" section of the report indicating no pre-crash vehicle data.
    - An event may be displayed in the "Event(s) Recovered" section of the report and "Interrupted" will be displayed for Pre-Crash Recorder Status.
- For the 2021MY Jeep Grand Cherokee L, an event may be displayed in the "Event(s) Recovered" section of the report as "End of Line Test event - See Data Limitations". This event is an End of Line test event from the module manufacturing process which will be included in the count for the total number of events, but no data will be displayed in the CDR Report.

SYSTEM STATUS AT RETRIEVAL:

- Original VIN - The VIN is captured by the ACM and then recorded as the Original VIN after 10 consecutive ignition cycles of capturing the same number. Once it has been recorded, this number cannot be changed.

SYSTEM CONFIGURATION AT RETRIEVAL/EVENT:

- The System Configuration data tables indicate the components that the ACM for a particular vehicle monitors and/or controls.
- Active Head Restraint (AHR) - This refers to some active head restraint systems that are electronically controlled by the ACM. AHRs may activate but not store an EDR Record if the delta V does not exceed the minimum delta V threshold. It is possible that the AHRs may activate after the EDR record has been stored and written, based on achieving the minimum delta V. This condition will result in an EDR but no record of the AHR activation in the CDR report. Activation of only the AHRs, if stored, will be a non-deployment event.

SYSTEM STATUS AT EVENT:
- Frontal Airbag Warning Lamp - In Veoneer modules, the airbag warning lamp may indicate ON at the time of a most recent event without any DTCs present if a deployment event has already occurred in the same ignition cycle. The ABWL will come on due to the deployment but, as there are still algorithms processing data, the actual faults will not be qualified yet and will not show up as DTCs.

- Number, Total Events - Cumulative number of events that the ACM has recorded, including those non-deployment events that have been overwritten by a subsequent event.

    - For the 2021MY Jeep Grand Cherokee L, the module will contain one, two, or three End of Line test events from the module manufacturing process which will be included in the count for the total number of events. However, the data from these End of Line test events will not be displayed in the CDR Report.
- Occupant Size Classification, Outboard Front Passenger - "Child" status may be used to indicate anything weighing less than a 5th percentile female adult crash dummy, including an empty seat; "Not Child" indicates anything weighing the same as or more than a 5th percentile female adult crash dummy. "SNA" indicates undetermined;

- For some non-North American applications, "Empty" indicates an empty seat;
- Odometer at Event - Vehicle odometer at the time of the event
  - For 2014-2016 MY Fiat 500L, the odometer value in miles may be shown in the brackets, labeled as kilometers. If this is the case, the non-bracketed value is not valid.
- Operation via Energy Reserve Only -"Yes" indicates that the ACM had lost power at or before T0 and was only operating on energy reserve at T0.
- Safety Belt Status, Outboard Front Passenger - For vehicles sold outside of North America which do not contain a buckle switch for the outboard front passenger, the safety belt status, outboard front passenger will default to "not buckled/unbuckled".
- System Voltage at Event, ACM - Voltage at the ACM as measured by the ACM. This voltage may be approximately 0.7V (one diode drop) below the bused voltage.
- System Voltage at Event, Bused - Voltage of the vehicle system, communicated on the communication bus to other electronic modules in the vehicle.
- Temperature, Outside - Ambient Air Temperature.
- Time, Airbag Warning Lamp On - This is a cumulative time. It indicates the total amount of time that the ACM has requested the Airbag Warning Lamp be turned on.
  - This time does not include the warning lamp bulb check time, which occurs at every ignition cycle
    - For 2013 MY Minivans and new 2017+ MY Jeep Compass, this time is only cumulative for the past 10 ignition cycles.
- Time from event 1 to 2 -
  - If only one event is stored, either a value of 0 or >5 may be displayed for this data element.
  - For the 2018+ MY Promaster and 2019+ MY RAM 1500, a value of 0 may be displayed for the first event or for events >5 seconds apart.
  - If multiple events exist in the EDR, the time from event 1 to event 2 is defined as:
    - For Bosch and TRW modules, the time from the prior recorded event (even if it has been overwritten) to the current recorded event.
    - For Continental modules, the time from the prior existing recorded event (as long as it is still displayed in the CDR report) to the current recorded event**.** If the prior event in a multi-event condition is overwritten by a subsequent event, the multi-event status will no longer be displayed.
    - For the 2019+ MY RAM 1500, the time from event 1 to 2 may utilize a non-stored event as event 1. In this case, the total number of events and multi-event data elements will not include the non-stored event in the number of events. However, the time from event 1 to 2 will be shown as time from that non-stored event.
- Time, Operation System Time - This is a cumulative lifetime timer for the ACM. It indicates the total amount of time the ACM has been powered up.
  - For 2019 and later MY RAMs, this time is only cumulative for the current ignition cycle.
- Tire Pressure Indicator Lamp at Event- "On" indicates a tire with low pressure or a fault in the tire pressure monitoring system at the time of the event. The TPM module DTC's should be read and recorded for final system interpretation. "Flashing" indicates a recent fault in the tire pressure monitoring system.
- Tire Pressure at Event, LF, LF, RF, RR - See "Tire Information" under Pre-Crash Data section for details.
- VIN at Event, Last 8 Digits- Last 8 digits of the VIN of the vehicle at the time the ACM records the event.

DEPLOYMENT COMMAND DATA:

- A "Yes" for a particular item indicates that the ACM commanded the deployment /activation of the associated device.
- The phrase "Exceeded Storage Range" for a particular time to deploy indicates that the deployment time is equal to or greater than the 255 milliseconds that can be stored.
- If a device is not deployed, the "time to deploy" for that device will N/A.
- A time to deploy value of 0 is valid and indicates that the deployment of the device triggered the EDR t0.
- In vehicles with Bosch and Veoneer ACMs, once a device has been deployed in an ignition cycle, it is possible that the ACM will not attempt to re-deploy any already deployed device during subsequent events in that same ignition cycle.

DTCs PRESENT AT START OF EVENT:

- If any DTCs (diagnostic trouble codes) are present in the ACM at the start of the event, these will be listed in this section. A dealership service manual can be used to decode the DTCs.
  - DTCs Present at Start of Event are not present in the Alfa Romeo Giulia, Fiat 500X, and the Jeep Renegade.
- For the 2021 MY+ Jeep Grand Cherokee L, the DTCs will not be updated for the subsequent events within the same ignition cycle.

SENSOR DATA:

- The design range for the angular rate data is:
  - +/- 240 deg/sec for Bosch ACMs unless specifically called out below
  - +/- 300 deg/sec for TRW ACMs, the 2019 MY RAM 1500, and the 2018+ MY Dodge Journey
  - +/- 290 deg/sec for 2008+ MY minivans and 2009-2017 MY Dodge Journey
  - +/- 340 deg/sec for 2017+ MY Chrysler Pacifica and new 2017+ MY Jeep Compass
  - - 416.67 deg/sec to +413.41 deg/sec for 2014+ MY Jeep Cherokee
  - +/- 300 deg/sec for vehicles with Veoneer ACMs
- For vehicles that store peripheral sensor data, t0 for the peripheral sensors is the same as the t0 for the delta V.
- Internal y acceleration is stored prior to t0 so the internal y acceleration data will usually be zero unless the rollover sensing algorithm has triggered storage of the EDR event.
- The words "Sensor Design Range Exceeded" and a vertical line will be displayed on the Longitudinal and Lateral Delta-V graphs the first time

the applicable sensor range is exceeded.
- For the 2010-2012 MY Chrysler Town and Country, Dodge Caravan, Dodge Grand Caravan, and Dodge Journey and the 2010-2011 MY Grand Voyager, the angular rate will only be displayed if it is non-zero.

PRE-CRASH DATA:

- The recorded Event may contain Pre-Crash data. Pre-Crash data from the various electronic control modules in the vehicle is transmitted to the Airbag Control Module via the vehicle's communication bus.
- In the Pre-Crash Data graph, data transmitted at a rate other than 0.1 seconds will be shown as dots for each available data point. Only data transmitted at a rate of 0.1 seconds will have the dots connected by a line.
- (if equip.) - If a parameter name is followed by the words (if equip.), then the parameter is only valid for vehicles equipped with the associated parameter/vehicle system.
- The MIL (Malfunction Indicator Lamp) Status for the various recorded systems indicates the requested state of the applicable malfunction indicator lamp at the time that the data was captured. Note: Some fault codes could be stored due to component/system damage from the accident. The appropriate diagnostic tool should be used to read any stored Diagnostic Trouble Codes (DTC's) in the various electronic modules (ACM, PCM, ABS, TCM, etc., where applicable) for use in interpretation of some vehicle specific recorded data.
- ABS Activity - "Yes" indicates an active ABS event in which the ABS is actively controlling the brakes.
- ABS MIL- This indicates the ABS fault indicator lamp status. It will only be "On" when there is a fault in the ABS system. The Electronic brake module DTC's should be read and recorded for final system interpretation.
- Accelerator Pedal, % Full - This indicates the actual position of the accelerator pedal. It will be "SNA" if the vehicle is in the power free mode which limits acceleration.
- Accelerator Pedal (Derived), % Full - This indicates the calculated value of the accelerator pedal for battery electric vehicles only.
- Accelerator Pedal/Engine Throttle, % Full - This indicates the actual position of the accelerator pedal unless the cruise control is engaged. If the cruise control is engaged, this indicates the actual position of the engine throttle blade.
- Brake Pedal Position - This indicates the percentage of brake pedal depression by the driver.
- Brake Torque - This indicates the calculated amount of brake torque the system is producing at the wheels.
- Brake Torque Driver - This indicates the calculated amount of brake torque that the driver is requesting.
- Braking System, Maximum Braking -- "Yes" indicates that ABS is active on all 4 wheels at the same time.
- Cruise Control:
    - Note that the following two Cruise Control data elements are only valid for vehicles not equipped with Adaptive Cruise Control (ACC). For vehicles equipped with ACC, the ACC data elements are used for both regular Cruise Control and ACC.
    - Cruise Control System/Lamp Status -"On" indicates that the Cruise Control system is turned on.
    - Cruise Control Status - "Off" indicates that all cruise control functionality is disabled; "NCC_On" indicates that the Normal Cruise Control system is turned on; "NCC_Engaged" indicates the Normal Cruise Control is actively controlling vehicle speed; "ACC_On" indicates that ACC is turned on; "ACC_Engaged" indicates that the ACC is actively controlling vehicle speed.
    - Cruise Control Engaged Status/Active - "Engaged"/"Yes" indicates the Cruise Control system is actively controlling vehicle speed. "Not Engaged"/"No" indicates the system is NOT controlling vehicle speed.
    - Cruise Control Override - "Active" indicates that the driver has overridden the set speed. "Not Active" indicates that the cruise control is either not turned on or is not being overridden.
    - Adaptive Cruise Control (ACC) Status (if equip.)- "Off" indicates that all cruise control functionality is disabled; "NCC_On" indicates that the Normal Cruise Control system is turned on; "NCC_Set" indicates the Normal Cruise Control is actively controlling vehicle speed; "ACC_On" indicates that ACC is turned on; "ACC_Set" indicates that the ACC is actively controlling vehicle speed. If the value is SNA for all time stamps, then the vehicle is not equipped with ACC.
    - Set Speed (if equip.)- This indicates the desired speed in mph that was input by the driver for the cruise control system.
    - ACC Faulted - "Yes" indicates that the ACC system will not function and the ACC warning lamp is lit; "No" indicates that the ACC system is functional and the ACC warning lamp is off;
    - For new 2017+MY Jeep Compass, cruise control data elements are only available for vehicles NOT equipped with ACC.
- Drive Mode - This indicates the driver selected mode of operation (e.g. normal, sport, track, …)
- Electronic Brake/Stability Control information:
    - Stability Control - This is the status of the ESC symbol - "car with squiggly lines" indicator lamp. "On" indicates that the ESC system is functional. "Off" indicates that the ESC system was turned off either by the driver or due to a fault or thermal mode shutdown. "Engaged" indicates an active ESC/TCS event. "Partial Off" indicates that engine management has been turned off but brake traction control is still functional.
        - For the Jeep Renegade, if the Stability Control is "Off", the ESC Button Status is "Disabled", and the vehicle speed exceeds 40 mph, the stability control system will operate in a reduced functionality mode with traction control turned off ("partial off" mode) even though the user disabled it. For all other conditions, when the Stability Control is "Off", the stability control system will be off.
    - ESC Button Status - This indicates the driver selected mode for the ESC system. "Disabled" indicates that the driver pressed the ESC Button to disable engine management. "Enabled" is the default state for the ESC system.
        - SRT and some Fiat products have the ability to fully disable the ESC system if the ESC button has been pressed and held for a specific amount of time. Additional system analysis is required.
    - ESP Feature is Completely Disabled - This indicates that the stability control system has turned off engine management, traction control, and stability control.
    - ESC/ESP MIL - This indicates the ESC/ESP fault indication lamp status. It will only be "On" when there is a fault or thermal mode shutdown in the ESC/ESP system. The ESC/ESP module DTC's should be read and recorded for final system interpretation.
    - Brake Intervention by ESP - "Yes" indicates that the stability control system has engaged the brakes.
    - Engine Torque Applied - "No" indicates no engine torque output was applied (as in Park/Neutral for Automatic transmissions or clutch depressed on manual or during an ESP/Traction Control event). If "Yes", then engine torque output was applied.
    - Traction Control Active - "Yes" indicates that the traction control system is actively controlling the vehicle's wheels.
- Electronic Park Brake (EPB):

- Park Brake Engaged - "Yes" indicates that the park brake is applied.
- EPB MIL - "On" indicates that there is a fault in the Electronic Park Brake System.

- Engine RPM - For the RAM ProMaster City, the minimum resolution for Engine RPM is 32 rpm.
- Engine Throttle, % Full - This indicates the actual position of the Engine Throttle blade. This data element is not supported by vehicles with diesel engines. Thus a value of "SNA" will be displayed if the vehicle has a diesel engine.
- ETC Lamp - Lamp "ON "indicates there is an active Electronic Throttle DTC.
- ETC Lamp Flashing - "Yes" indicates that the ETC is in the limp-in mode.
- Forward Collision Warning (FCW) (if equip.):
  - Object of Interest Distance - If the FCW system is acting on the object, this indicates the actual forward distance to the main object being tracked by the FCW system. "No Object" indicates that the FCW system is not currently acting on an object. If the value is SNA for all time stamps, then the vehicle is not equipped with FCW.
  - FCW System Operating State - "Off" indicates that the FCW system is off and the FCW Warning Lamp will be "On"; "On" indicates that the FCW system is on with the audible and visual warnings enabled.
  - FCW System Status - "Off" indicates that the FCW system is off and the FCW Warning Lamp will be "On". "On-warning" indicates that the FCW system is on but active braking is disabled. In an FCW event, the driver will only receive FCW audible and visual warnings. "On-full" indicates that the FCW system is fully on with active braking enabled as well as the audible and visual warnings enabled. SNA indicates that the vehicle is not equipped with FCW.
  - FCW Braking Enabled - "Yes" indicates that the FCW system has active braking enabled; "No" indicates that the FCW system does not have active braking enabled.
- Gear Position/Current Gear - For all vehicles except the RAM ProMaster City, this indicates the current transmission gear.
  For the RAM ProMaster City, this indicates the status of the gear shift lever.
- Estimate Regenerative Braking Axle Torque - (HEV only) This indicates the calculated braking torque applied by the HEV system to the drive axles in Nm.
- Driver Intended Axle Torque - (HEV only) This indicates the calculated value of torque in Nm being applied to the drive axles based on accelerator pedal position.
- Trans torque request - (HEV only) "Yes" indicates that the transmission controller has requested a torque reduction when shifting from one gear to another.
- Static Axle Torque - (HEV only) This indicates the torque in Nm at the axle when the speed of the axle is constant.
- HEV Battery Pack Contactor State - (HEV only) "Closed' indicates that the HEV battery pack is connected to the vehicle's electrical system. "Open" indicates that the HEV battery pack is disconnected from the vehicle's electrical system. "Pre-Charging" indicates that the inverter internal capacitor is charging. "Pre-Charge Failed" indicates that the attempt to charge an internal capacitor failed. "Pre-Charge Inhibited" indicates that an attempt to charge an internal capacitor was not made.
- HEV Lamp Request - (HEV only) This indicates the HEV indicator lamp status. It will only be "On" when there is a fault in the HEV system. The vehicle DTC's should be read and recorded for final system interpretation.
- Master Cylinder Pressure - This indicates the brake pressure applied to the brakes through the brake pedal.
- PCM MIL - This indicates the PCM fault indicator lamp status. It will only be "On" when there is a fault in the PCM. "Flashing" indicates misfire detection. The Powertrain Control Module DTC's should be read and recorded for final system interpretation.
- Pre-Crash Recorder Complete - Due to the interruption of data recording in one section, this data element may display "Interrupted" for all sections when some data sections are actually complete.
  - For the 2014 MY Jeep Grand Cherokee and Dodge Durango, if recording of angular rate data is interrupted, the entire EDR record will display "Interrupted" even though the rest of the data may be complete.
- PRND/PRNDL/PRNDS Status - This indicates the status of the Shifter Position.
- Raw Manifold Pressure - This indicates engine load in kPa.
- Reverse Gear - For manual transmission vehicles only, "Yes" indicates the transmission is in the reverse gear.
- Service Brake - "On" indicates that the brake pedal is physically depressed. Braking from the ABS or FCW systems will not be reported in this data element.
- Shift Selector Position - This indicates the status of the gear shift selector.
- Speed, Vehicle Indicated - This indicates the average of the wheel speeds of the drive wheels.
  - The reporting resolution for Speed, Vehicle Indicated is 1 km/h.
  - To display this data element in mph, the CDR Tool converts the km/h to mph and reports a rounded value in mph.
  - The accuracy of the recorded Speed, Vehicle Indicated may be affected by a significant change of the tire size for the drive wheels or the final drive axle ratio of the transmission from the factory build specifications, wheel lockup, wheel slip, or wheel spin.
  - On some vehicles capable of speeds in excess of 255km/h (about 158mph), the actual vehicle speed may have exceeded the reporting range. It is always prudent to check the reported wheel speeds and other parameters to confirm the Speed, Vehicle Indicated value(s).
- Tire Information:
  - XX where LF = Left Front Tire, RF = Right Front Tire, LR = Left Rear Tire, and RR = Right Rear Tire.
  - Tire X Location - This indicates the location of the tire pressure sensor data being displayed for that time stamp. Default is used to indicate that the location of the tire pressure sensor is unknown or there is no tire pressure sensor in that wheel. Vehicles with Base Tire Pressure Monitoring systems will display SNA for both Tire Locations as these vehicles do not send actual pressure values across the communication bus.
  - Tire X Pressure/Tire Pressure Status, XX -This indicates the actual pressure status of the Tire Location defined in the previous column (Tire X Location) or by the values for XX. Possible values are Significantly Under Inflated (TPM lamp will be on), LOW/Under/Under Inflated, NORMAL, HIGH/Over/Over Inflated, or SNA for this parameter. Vehicles with Base Tire Pressure Monitoring systems may display NORMAL even though these vehicles do not send actual pressure values across the communication bus.
  - Tire X Pressure/Tire Pressure Value, XX (psi) - This indicates the actual tire pressure value of the Tire Location defined in the previous column (Tire X Location) or by the values for XX. Vehicles with Base Tire Pressure Monitoring systems will display N/A for this parameter as these vehicles do not send actual pressure values across the communication bus.
  - For the following vehicles, the tire location, if displayed, may not be accurate if the tires have been rotated:
    -2013 MY Ram

-2013-2017 MY Jeep Patriot
-2013-2014 MY Chrysler 200
-2013-2017 MY Jeep Compass
-2013-2016 MY Dodge Dart

- For the 2013 MY Ram, if the values for tire pressure status and the tire pressure are SNA, the EDR does not store tire pressure monitoring data.
- Tire pressure is not stored in the EDR for the following vehicles:
  -2014-2018 MY RAM 1500
  -2014+ MY RAM (all but 1500)
  -2013+ MY Jeep Wrangler
  -2013 MY Jeep Grand Cherokee
  -2013 MY Dodge Durango
  -2013-2014 MY Dodge Challenger
  -2013-2016 MY Chrysler Town and Country
  -2013+ MY Dodge Grand Caravan
  -2015+ MY Fiat 500

- Wheel Speed, XX - This indicates the speed value of a particular tire as denoted by XX.

- Tire Pressure Monitor Indicator Lamp/Faults - "On" indicates a tire with low pressure or a fault in the tire pressure monitoring system. The TPM module DTC's should be read and recorded for final system interpretation. "Flashing" indicates a recent fault in the tire pressure monitoring system.
- "T0" ("Time zero" where '0' is seen as subscript) is defined as "beginning of the crash event". T0 is the time at which the ACM algorithm is activated, a specific Delta-V is exceeded, or a non-reversible restraint device is deployed. T0 may be defined differently for front, side, rear and roll-over events.
  - If multiple algorithm decisions (i.e.: frontal, side, rear and/or rollover) are made before the first recorded event ends, all of those events are part of the same event record and "T0" is defined as the "T0" from the first recorded event.
  - In the Pre-Crash data tables, the relative time marker "-0.1s" or "-0.25s" respectively represents the last set of data captured in the buffer prior to "T0."
- Torque Information:
  - Axle Torque - This indicates the E-Motor Torque multiplied by the gear ratio for battery electric vehicles only.
  - E-Motor Torque - This indicates the calculated torque from the output shaft of the electric motor in battery electric vehicles only.
- Traction Control Intervention Active - "Active" indicates wheel slippage was occurring during vehicle acceleration.

APPLICATION INFORMATION:

- Alfa Romeo Giulia, Alfa Romeo Stelvio, Fiat 500L, Fiat 500X, and Jeep Renegade are only CDR supported in the United States, Canada, and Saudi Arabia markets.
- Fiat 500/500e is only CDR supported in the United States, Canada, Mexico, and Brazil markets.

03002_Chrysler_ r046

System Status at Retrieval

Original VIN	3C4NJDCB9JT******
Ignition Cycle, Download	8,122
ACM Part Number	68299147AH
ACM Serial Number	T08JF3267G0288
ACM Supplier	Continental
ACM Supply voltage at time of retrieval	4.100

System Configuration at Retrieval

Configured for Driver Frontal Airbag	Yes
Configured for Driver Knee Airbag	Yes
Configured for Driver Seatbelt Retractor Pretensioner	Yes
Configured for Driver Seatbelt Load Limiter	Yes
Configured for Driver Seatbelt Anchor Pretensioner	Yes
Configured for Driver Seatbelt Buckle Switch	Yes
Configured for Driver Seat Track Position Sensor	Yes
Configured for Left Side Curtain Airbag	Yes
Configured for Left Front Seat Side Airbag	Yes
Configured for Passenger Frontal Airbag	Yes
Configured for Passenger Seatbelt Retractor Pretensioner	Yes
Configured for Passenger Seatbelt Load Limiter	Yes

Hexadecimal Data

Data that the vehicle manufacturer has specified for data retrieval is shown in the hexadecimal data section of the CDR report. The hexadecimal data section of the CDR report may contain data that is not translated by the CDR program. The control module contains additional data that is not retrievable by the CDR system.

Disclaimer of Liability

The users of the CDR product and reviewers of the CDR reports and exported data shall ensure that data and information supplied is applicable to the vehicle, vehicle's system(s) and the vehicle ECU. Robert Bosch LLC and all its directors, officers, employees and members shall not be liable for damages arising out of or related to incorrect, incomplete or misinterpreted software and/or data. Robert Bosch LLC expressly excludes all liability for incidental, consequential, special or punitive damages arising from or related to the CDR data, CDR software or use thereof.

Appendix B: 2016 Chrysler 200 Event Data Recorder Report

The EDR report in this technical report was imaged using the current version of the Bosch CDR software at the time of the vehicle inspection. The CDR report in the associated Crash Viewer application may differ relative to this report.

IMPORTANT NOTICE: Robert Bosch LLC and the manufacturers whose vehicles are accessible using the CDR System urge end users to use the latest production release of the Crash Data Retrieval system software when viewing, printing or exporting any retrieved data from within the CDR program. Using the latest version of the CDR software is the best way to ensure that retrieved data has been translated using the most current information provided by the manufacturers of the vehicles supported by this product.

CDR File Information

User Entered VIN	1C3CCCAB2GN******
User	
Case Number	
EDR Data Imaging Date	11/02/2022
Crash Date	
Filename	CR22015_V2_ACM.CDRX
Saved on	Wednesday, November 2 2022 at 13:40:32
Imaged with CDR version	Crash Data Retrieval Tool 23.0.1
Imaged with Software Licensed to (Company Name)	NHTSA
Reported with CDR version	Crash Data Retrieval Tool 23.1
Reported with Software Licensed to (Company Name)	NHTSA
EDR Device Type	Airbag Control Module
Event(s) recovered	Most Recent Event

Comments

No comments entered.

Data Limitations

AIRBAG CONTROL MODULE (ACM) DATA LIMITATIONS:

GENERAL INFORMATION:

CAUTION: During direct-to-module imaging where the Airbag Control Module (ACM) is disconnected and removed from a vehicle, make sure the ACM is not moved, tilted or turned over while connected to and powered by the CDR Interface Module (with appropriate adaptors in place, where required). Also, after a CDR imaging process, wait 2 minutes after power is removed from the ACM before attempting to move the module. Not following these general ACM guidelines for direct-to-module imaging may cause new events to be recorded in the ACM.

- For additional definitions, please refer to the CDR Help File Glossary.
- As the VIN may be used to determine the configuration of the restraint system, it is imperative that the correct VIN be entered into the CDR Tool during the imaging process.
- If a DLC adapter has to be used with the CDR Tool, the "Read VIN from Vehicle" feature in the CDR Tool will not work. The VIN will have to be manually entered.
- If a 2021 or later MY Dodge Durango was imaged with a CDR Tool version 19.4 or older, the ACM will need to be reimaged as not all the peripheral sensor data will have been retrieved.
- If a 2023 MY Jeep Grand Cherokee or Jeep Grand Cherokee L was imaged with a CDR Tool version 23.0.2 or older, the ACM will need to be reimaged as not all the data will have been retrieved.
- The 2019 MY RAM 1500 may take up to 30 minutes to retrieve the EDR data. The ignition will time out within 20 minutes so the vehicle flashers must be turned on within 20 minutes to keep the ignition and communication bus active.
- Lateral Delta V will not be displayed for the 2013 MY Jeep Compass and Patriot.
- Ignition Cycle, download/crash
    - For RAMs and Dodge Vipers, there are 2 internal ignition counters in the ACM. It is possible for the ignition cycles at download to be different than the ignition cycles at event due to the 2 different counters.
    - Note that the ignition cycle count in an ACM may differ from the ignition cycle count in a Pedestrian Protection Module (PPM) in the same vehicle due to the fact that the ACM has an energy reserve while the PPM does not.

The following table provides an explanation of the sign notation for data elements that may be included in this CDR report. All directional references to sign notation are from the perspective of the driver when seated in the vehicle facing the direction of forward vehicle travel.

Data Element Name	Positive Sign Notation Indicates
Delta-V, Longitudinal	Forward
Maximum Delta-V, Longitudinal	Forward
Delta-V, Lateral	Left to Right

Maximum Delta-V, Lateral	Left to Right
Angular Rate	Clockwise rotation around the longitudinal axis
Peripheral Sensors, X and Y	Outside to Inside
Pressure Sensors	Compression of air
Internal Y Acceleration	Left to Right
Low-g Z Acceleration	Downward
Steering Input	Steering wheel turned counter clockwise
Yaw Rate	Counter clockwise rotation

CDR FILE INFORMATION:

- An event will be stored when the delta V is approximately 5 mph (8 km/h) or greater within a 150 ms interval.
- For non-NAFTA ACMs that control pedestrian protection devices, a non-deployment event will be stored when the pedestrian protection devices are activated.
- A non-deployment event may be stored with activation of the Active Head Restraints. See AHR explanation under System Configuration at Retrieval/Event section.
- A deployment event may be stored in a 2019 MY+ Ram 3500 as the result of a rear impact, even though the Ram 3500 does not deploy any restraint system devices in a rear impact.

Event(s) Recovered definitions:
- None - There are no stored events in the ACM
- Not Retrievable - Event Data may be stored in the ACM but is not retrievable by the CDR Tool.
- Most Recent Event - Data of the most recent event is displayed in the report
- 1st Prior Event - Two events are stored in the ACM, Data displayed is of the first prior event.
- 2nd Prior Event - Three events are stored in the ACM, Data displayed is of the second prior event.
- For 2013 and 2014 MY Dodge Journey and Fiat Freemont:
    - Event Record 1 - Data from an event is stored in the ACM (not necessarily in chronological order)
    - Event Record 2 - Data from another event is stored in the ACM (not necessarily in chronological order)
- For TRW modules:
- If there is a side impact, two EDR events may be stored for the one side impact event. The second event may be recorded due to the Lateral Delta V exceeding 5 mph (8 km/h) within a 150 ms interval after the side deployment occurred.
- For some Fiat vehicles:
    - Two EDR events may be stored for one impact event. The second event may be recorded due to the deployment of the frontal airbag, 3rd stage passenger.
- During an event, if power to the ACM is lost, all or part of the event data record may not be recorded. An indication may be observed in the recorded data under this condition: The restraint data is recorded first and then the vehicle data.
    - "None" may be displayed in the "Event(s) Recovered" section of the report indicating no pre-crash vehicle data.
    - An event may be displayed in the "Event(s) Recovered" section of the report and "Interrupted" will be displayed for Pre-Crash Recorder Status.
- For the 2021MY Jeep Grand Cherokee L, an event may be displayed in the "Event(s) Recovered" section of the report as "End of Line Test event - See Data Limitations". This event is an End of Line test event from the module manufacturing process which will be included in the count for the total number of events, but no data will be displayed in the CDR Report.

SYSTEM STATUS AT RETRIEVAL:

- Original VIN - The VIN is captured by the ACM and then recorded as the Original VIN after 10 consecutive ignition cycles of capturing the same number. Once it has been recorded, this number cannot be changed.

SYSTEM CONFIGURATION AT RETRIEVAL/EVENT:

- The System Configuration data tables indicate the components that the ACM for a particular vehicle monitors and/or controls.
- Active Head Restraint (AHR) - This refers to some active head restraint systems that are electronically controlled by the ACM. AHRs may activate but not store an EDR Record if the delta V does not exceed the minimum delta V threshold. It is possible that the AHRs may activate after the EDR record has been stored and written, based on achieving the minimum delta V. This condition will result in an EDR but no record of the AHR activation in the CDR report. Activation of only the AHRs, if stored, will be a non-deployment event.

SYSTEM STATUS AT EVENT:
- Frontal Airbag Warning Lamp - In Veoneer modules, the airbag warning lamp may indicate ON at the time of a most recent event without any DTCs present if a deployment event has already occurred in the same ignition cycle. The ABWL will come on due to the deployment but, as there are still algorithms processing data, the actual faults will not be qualified yet and will not show up as DTCs.

- Number, Total Events - Cumulative number of events that the ACM has recorded, including those non-deployment events that have been overwritten by a subsequent event.
    - For the 2021MY Jeep Grand Cherokee L, the module will contain one, two, or three End of Line test events from the module manufacturing process which will be included in the count for the total number of events. However, the data from these End of

Line test events will not be displayed in the CDR Report.
- Occupant Size Classification, Outboard Front Passenger - "Child" status may be used to indicate anything weighing less than a 5th percentile female adult crash dummy, including an empty seat; "Not Child" indicates anything weighing the same as or more than a 5th percentile female adult crash dummy. "SNA" indicates undetermined;
    - For some non-North American applications, "Empty" indicates an empty seat;
- Odometer at Event - Vehicle odometer at the time of the event
    - For 2014-2016 MY Fiat 500L, the odometer value in miles may be shown in the brackets, labeled as kilometers. If this is the case, the non-bracketed value is not valid.
- Operation via Energy Reserve Only -"Yes" indicates that the ACM had lost power at or before T0 and was only operating on energy reserve at T0.
- Safety Belt Status, Outboard Front Passenger - For vehicles sold outside of North America which do not contain a buckle switch for the outboard front passenger, the safety belt status, outboard front passenger will default to "not buckled/unbuckled".
- System Voltage at Event, ACM - Voltage at the ACM as measured by the ACM. This voltage may be approximately 0.7V (one diode drop) below the bused voltage.
- System Voltage at Event, Bused - Voltage of the vehicle system, communicated on the communication bus to other electronic modules in the vehicle.
- Temperature, Outside - Ambient Air Temperature.
- Time, Airbag Warning Lamp On - This is a cumulative time. It indicates the total amount of time that the ACM has requested the Airbag Warning Lamp be turned on.
    - This time does not include the warning lamp bulb check time, which occurs at every ignition cycle
        - For 2013 MY Minivans and new 2017+ MY Jeep Compass, this time is only cumulative for the past 10 ignition cycles.
- Time from event 1 to 2 -
    - If only one event is stored, either a value of 0 or >5 may be displayed for this data element.
    - For the 2018+ MY Promaster and 2019+ MY RAM 1500, a value of 0 may be displayed for the first event or for events >5 seconds apart.
    - If multiple events exist in the EDR, the time from event 1 to event 2 is defined as:
        - For Bosch and TRW modules, the time from the prior recorded event (even if it has been overwritten) to the current recorded event.
        - For Continental modules, the time from the prior existing recorded event (as long as it is still displayed in the CDR report) to the current recorded event. If the prior event in a multi-event condition is overwritten by a subsequent event, the multi-event status will no longer be displayed.
        - For the 2019+ MY RAM 1500, the time from event 1 to 2 may utilize a non-stored event as event 1. In this case, the total number of events and multi-event data elements will not include the non-stored event in the number of events. However, the time from event 1 to 2 will be shown as time from that non-stored event.
- Time, Operation System Time - This is a cumulative lifetime timer for the ACM. It indicates the total amount of time the ACM has been powered up.
    - For 2019 and later MY RAMs, this time is only cumulative for the current ignition cycle.
- Tire Pressure Indicator Lamp at Event- "On" indicates a tire with low pressure or a fault in the tire pressure monitoring system at the time of the event. The TPM module DTC's should be read and recorded for final system interpretation. "Flashing" indicates a recent fault in the tire pressure monitoring system.
- Tire Pressure at Event, LF, LF, RF, RR - See "Tire Information" under Pre-Crash Data section for details.
- VIN at Event, Last 8 Digits- Last 8 digits of the VIN of the vehicle at the time the ACM records the event.

DEPLOYMENT COMMAND DATA:

- A "Yes" for a particular item indicates that the ACM commanded the deployment /activation of the associated device.
- The phrase "Exceeded Storage Range" for a particular time to deploy indicates that the deployment time is equal to or greater than the 255 milliseconds that can be stored.
- If a device is not deployed, the "time to deploy" for that device will N/A.
- A time to deploy value of 0 is valid and indicates that the deployment of the device triggered the EDR t0.
- In vehicles with Bosch and Veoneer ACMs, once a device has been deployed in an ignition cycle, it is possible that the ACM will not attempt to re-deploy any already deployed device during subsequent events in that same ignition cycle.

DTCs PRESENT AT START OF EVENT:

- If any DTCs (diagnostic trouble codes) are present in the ACM at the start of the event, these will be listed in this section. A dealership service manual can be used to decode the DTCs.
    - DTCs Present at Start of Event are not present in the Alfa Romeo Giulia, Fiat 500X, and the Jeep Renegade.
- For the 2021 MY+ Jeep Grand Cherokee L, the DTCs will not be updated for the subsequent events within the same ignition cycle.

SENSOR DATA:

- The design range for the angular rate data is:
    - +/- 240 deg/sec for Bosch ACMs unless specifically called out below
    - +/- 300 deg/sec for TRW ACMs, the 2019 MY RAM 1500, and the 2018+ MY Dodge Journey

    - +/- 290 deg/sec for 2008+ MY minivans and 2009-2017 MY Dodge Journey
    - +/- 340 deg/sec for 2017+ MY Chrysler Pacifica and new 2017+ MY Jeep Compass
    - - 416.67 deg/sec to +413.41 deg/sec for 2014+ MY Jeep Cherokee
    - +/- 300 deg/sec for vehicles with Veoneer ACMs
- For vehicles that store peripheral sensor data, t0 for the peripheral sensors is the same as the t0 for the delta V.
- Internal y acceleration is stored prior to t0 so the internal y acceleration data will usually be zero unless the rollover sensing algorithm has triggered storage of the EDR event.
- The words "Sensor Design Range Exceeded" and a vertical line will be displayed on the Longitudinal and Lateral Delta-V graphs the first time the applicable sensor range is exceeded.
- For the 2010-2012 MY Chrysler Town and Country, Dodge Caravan, Dodge Grand Caravan, and Dodge Journey and the 2010-2011 MY Grand Voyager, the angular rate will only be displayed if it is non-zero.

PRE-CRASH DATA:

- The recorded Event may contain Pre-Crash data. Pre-Crash data from the various electronic control modules in the vehicle is transmitted to the Airbag Control Module via the vehicle's communication bus.
- In the Pre-Crash Data graph, data transmitted at a rate other than 0.1 seconds will be shown as dots for each available data point. Only data transmitted at a rate of 0.1 seconds will have the dots connected by a line.
- (if equip.) - If a parameter name is followed by the words (if equip.), then the parameter is only valid for vehicles equipped with the associated parameter/vehicle system.
- The MIL (Malfunction Indicator Lamp) Status for the various recorded systems indicates the requested state of the applicable malfunction indicator lamp at the time that the data was captured. Note: Some fault codes could be stored due to component/system damage from the accident. The appropriate diagnostic tool should be used to read any stored Diagnostic Trouble Codes (DTC's) in the various electronic modules (ACM, PCM, ABS, TCM, etc., where applicable) for use in interpretation of some vehicle specific recorded data.
- ABS Activity - "Yes" indicates an active ABS event in which the ABS is actively controlling the brakes.
- ABS MIL- This indicates the ABS fault indicator lamp status. It will only be "On" when there is a fault in the ABS system. The Electronic brake module DTC's should be read and recorded for final system interpretation.
- Accelerator Pedal, % Full - This indicates the actual position of the accelerator pedal. It will be "SNA" if the vehicle is in the power free mode which limits acceleration.
- Accelerator Pedal (Derived), % Full - This indicates the calculated value of the accelerator pedal for battery electric vehicles only.
- Accelerator Pedal/Engine Throttle, % Full - This indicates the actual position of the accelerator pedal unless the cruise control is engaged. If the cruise control is engaged, this indicates the actual position of the engine throttle blade.
- Brake Pedal Position - This indicates the percentage of brake pedal depression by the driver.
- Brake Torque - This indicates the calculated amount of brake torque the system is producing at the wheels.
- Brake Torque Driver - This indicates the calculated amount of brake torque that the driver is requesting.
- Braking System, Maximum Braking -- "Yes" indicates that ABS is active on all 4 wheels at the same time.
- Cruise Control:
    - Note that the following two Cruise Control data elements are only valid for vehicles not equipped with Adaptive Cruise Control (ACC). For vehicles equipped with ACC, the ACC data elements are used for both regular Cruise Control and ACC.
    - Cruise Control System/Lamp Status -"On" indicates that the Cruise Control system is turned on.
    - Cruise Control Status - "Off" indicates that all cruise control functionality is disabled; "NCC_On" indicates that the Normal Cruise Control system is turned on; "NCC_Engaged" indicates the Normal Cruise Control is actively controlling vehicle speed; "ACC_On" indicates that ACC is turned on; "ACC_Engaged" indicates that the ACC is actively controlling vehicle speed.
    - Cruise Control Engaged Status/Active - "Engaged"/"Yes" indicates the Cruise Control system is actively controlling vehicle speed. "Not Engaged"/"No" indicates the system is NOT controlling vehicle speed.
    - Cruise Control Override - "Active" indicates that the driver has overridden the set speed. "Not Active" indicates that the cruise control is either not turned on or is not being overridden.
    - Adaptive Cruise Control (ACC) Status (if equip.)- "Off" indicates that all cruise control functionality is disabled; "NCC_On" indicates that the Normal Cruise Control system is turned on; "NCC_Set" indicates the Normal Cruise Control is actively controlling vehicle speed; "ACC_On" indicates that ACC is turned on; "ACC_Set" indicates that the ACC is actively controlling vehicle speed. If the value is SNA for all time stamps, then the vehicle is not equipped with ACC.
    - Set Speed (if equip.)- This indicates the desired speed in mph that was input by the driver for the cruise control system.
    - ACC Faulted - "Yes" indicates that the ACC system will not function and the ACC warning lamp is lit; "No" indicates that the ACC system is functional and the ACC warning lamp is off;
    - For new 2017+MY Jeep Compass, cruise control data elements are only available for vehicles NOT equipped with ACC.
- Drive Mode - This indicates the driver selected mode of operation (e.g. normal, sport, track, …)
- Electronic Brake/Stability Control information:
    - Stability Control - This is the status of the ESC symbol - "car with squiggly lines" indicator lamp. "On" indicates that the ESC system is functional. "Off" indicates that the ESC system was turned off either by the driver or due to a fault or thermal mode shutdown. "Engaged" indicates an active ESC/TCS event. "Partial Off" indicates that engine management has been turned off but brake traction control is still functional.
        - For the Jeep Renegade, if the Stability Control is "Off", the ESC Button Status is "Disabled", and the vehicle speed exceeds 40 mph, the stability control system will operate in a reduced functionality mode with traction control turned off ("partial off" mode) even though the user disabled it. For all other conditions, when the Stability Control is "Off", the stability control system will be off.
    - ESC Button Status - This indicates the driver selected mode for the ESC system. "Disabled" indicates that the driver pressed the ESC Button to disable engine management. "Enabled" is the default state for the ESC system.
        - SRT and some Fiat products have the ability to fully disable the ESC system if the ESC button has been pressed and

held for a specific amount of time. Additional system analysis is required.
- ESP Feature is Completely Disabled - This indicates that the stability control system has turned off engine management, traction control, and stability control.
- ESC/ESP MIL - This indicates the ESC/ESP fault indication lamp status. It will only be "On" when there is a fault or thermal mode shutdown in the ESC/ESP system. The ESC/ESP module DTC's should be read and recorded for final system interpretation.
- Brake Intervention by ESP - "Yes" indicates that the stability control system has engaged the brakes.
- Engine Torque Applied - "No" indicates no engine torque output was applied (as in Park/Neutral for Automatic transmissions or clutch depressed on manual or during an ESP/Traction Control event). If "Yes", then engine torque output was applied.
- Traction Control Active - "Yes" indicates that the traction control system is actively controlling the vehicle's wheels.

- Electronic Park Brake (EPB):
  - Park Brake Engaged - "Yes" indicates that the park brake is applied.
  - EPB MIL - "On" indicates that there is a fault in the Electronic Park Brake System.
- Engine RPM - For the RAM ProMaster City, the minimum resolution for Engine RPM is 32 rpm.
- Engine Throttle, % Full - This indicates the actual position of the Engine Throttle blade. This data element is not supported by vehicles with diesel engines. Thus a value of "SNA" will be displayed if the vehicle has a diesel engine.
- ETC Lamp - Lamp "ON "indicates there is an active Electronic Throttle DTC.
- ETC Lamp Flashing - "Yes" indicates that the ETC is in the limp-in mode.
- Forward Collision Warning (FCW) (if equip.):
  - Object of Interest Distance - If the FCW system is acting on the object, this indicates the actual forward distance to the main object being tracked by the FCW system. "No Object" indicates that the FCW system is not currently acting on an object. If the value is SNA for all time stamps, then the vehicle is not equipped with FCW.
  - FCW System Operating State - "Off" indicates that the FCW system is off and the FCW Warning Lamp will be "On"; "On" indicates that the FCW system is on with the audible and visual warnings enabled.
  - FCW System Status - "Off" indicates that the FCW system is off and the FCW Warning Lamp will be "On". "On-warning" indicates that the FCW system is on but active braking is disabled. In an FCW event, the driver will only receive FCW audible and visual warnings. "On-full" indicates that the FCW system is fully on with active braking enabled as well as the audible and visual warnings enabled. SNA indicates that the vehicle is not equipped with FCW.
  - FCW Braking Enabled - "Yes" indicates that the FCW system has active braking enabled; "No" indicates that the FCW system does not have active braking enabled.
- Gear Position/Current Gear - For all vehicles except the RAM ProMaster City, this indicates the current transmission gear.
  For the RAM ProMaster City, this indicates the status of the gear shift lever.
- Estimate Regenerative Braking Axle Torque - (HEV only) This indicates the calculated braking torque applied by the HEV system to the drive axles in Nm.
- Driver Intended Axle Torque - (HEV only) This indicates the calculated value of torque in Nm being applied to the drive axles based on accelerator pedal position.
- Trans torque request - (HEV only) "Yes" indicates that the transmission controller has requested a torque reduction when shifting from one gear to another.
- Static Axle Torque - (HEV only) This indicates the torque in Nm at the axle when the speed of the axle is constant.
- HEV Battery Pack Contactor State - (HEV only) "Closed' indicates that the HEV battery pack is connected to the vehicle's electrical system. "Open" indicates that the HEV battery pack is disconnected from the vehicle's electrical system. "Pre-Charging" indicates that the inverter internal capacitor is charging. "Pre-Charge Failed" indicates that the attempt to charge an internal capacitor failed. "Pre-Charge Inhibited" indicates that an attempt to charge an internal capacitor was not made.
- HEV Lamp Request - (HEV only) This indicates the HEV indicator lamp status. It will only be "On" when there is a fault in the HEV system. The vehicle DTC's should be read and recorded for final system interpretation.
- Master Cylinder Pressure - This indicates the brake pressure applied to the brakes through the brake pedal.
- PCM MIL - This indicates the PCM fault indicator lamp status. It will only be "On" when there is a fault in the PCM. "Flashing" indicates misfire detection. The Powertrain Control Module DTC's should be read and recorded for final system interpretation.
- Pre-Crash Recorder Complete - Due to the interruption of data recording in one section, this data element may display "Interrupted" for all sections when some data sections are actually complete.
  - For the 2014 MY Jeep Grand Cherokee and Dodge Durango, if recording of angular rate data is interrupted, the entire EDR record will display "Interrupted" even though the rest of the data may be complete.
- PRND/PRNDL/PRNDS Status - This indicates the status of the Shifter Position.
- Raw Manifold Pressure - This indicates engine load in kPa.
- Reverse Gear - For manual transmission vehicles only, "Yes" indicates the transmission is in the reverse gear.
- Service Brake - "On" indicates that the brake pedal is physically depressed. Braking from the ABS or FCW systems will not be reported in this data element.
- Shift Selector Position - This indicates the status of the gear shift selector.
- Speed, Vehicle Indicated - This indicates the average of the wheel speeds of the drive wheels.
  - The reporting resolution for Speed, Vehicle Indicated is 1 km/h.
  - To display this data element in mph, the CDR Tool converts the km/h to mph and reports a rounded value in mph.
  - The accuracy of the recorded Speed, Vehicle Indicated may be affected by a significant change of the tire size for the drive wheels or the final drive axle ratio of the transmission from the factory build specifications, wheel lockup, wheel slip, or wheel spin.
  - On some vehicles capable of speeds in excess of 255km/h (about 158mph), the actual vehicle speed may have exceeded the reporting range. It is always prudent to check the reported wheel speeds and other parameters to confirm the Speed, Vehicle Indicated value(s).
- Tire Information:
  - XX where LF = Left Front Tire, RF = Right Front Tire, LR = Left Rear Tire, and RR = Right Rear Tire.

- Tire X Location - This indicates the location of the tire pressure sensor data being displayed for that time stamp. Default is used to indicate that the location of the tire pressure sensor is unknown or there is no tire pressure sensor in that wheel. Vehicles with Base Tire Pressure Monitoring systems will display SNA for both Tire Locations as these vehicles do not send actual pressure values across the communication bus.
- Tire X Pressure/Tire Pressure Status, XX -This indicates the actual pressure status of the Tire Location defined in the previous column (Tire X Location) or by the values for XX. Possible values are Significantly Under Inflated (TPM lamp will be on), LOW/Under/Under Inflated, NORMAL, HIGH/Over/Over Inflated, or SNA for this parameter. Vehicles with Base Tire Pressure Monitoring systems may display NORMAL even though these vehicles do not send actual pressure values across the communication bus.
- Tire X Pressure/Tire Pressure Value, XX (psi) - This indicates the actual tire pressure value of the Tire Location defined in the previous column (Tire X Location) or by the values for XX. Vehicles with Base Tire Pressure Monitoring systems will display N/A for this parameter as these vehicles do not send actual pressure values across the communication bus.
- For the following vehicles, the tire location, if displayed, may not be accurate if the tires have been rotated:
  - -2013 MY Ram
  - -2013-2017 MY Jeep Patriot
  - -2013-2014 MY Chrysler 200
  - -2013-2017 MY Jeep Compass
  - -2013-2016 MY Dodge Dart
- For the 2013 MY Ram, if the values for tire pressure status and the tire pressure are SNA, the EDR does not store tire pressure monitoring data.
- Tire pressure is not stored in the EDR for the following vehicles:
  - -2014-2018 MY RAM 1500
  - -2014+ MY RAM (all but 1500)
  - -2013+ MY Jeep Wrangler
  - -2013 MY Jeep Grand Cherokee
  - -2013 MY Dodge Durango
  - -2013-2014 MY Dodge Challenger
  - -2013-2016 MY Chrysler Town and Country
  - -2013+ MY Dodge Grand Caravan
  - -2015+ MY Fiat 500

- Wheel Speed, XX - This indicates the speed value of a particular tire as denoted by XX.

- Tire Pressure Monitor Indicator Lamp/Faults - "On" indicates a tire with low pressure or a fault in the tire pressure monitoring system. The TPM module DTC's should be read and recorded for final system interpretation. "Flashing" indicates a recent fault in the tire pressure monitoring system.
- "T0" ("Time zero" where '0' is seen as subscript) is defined as "beginning of the crash event". T0 is the time at which the ACM algorithm is activated, a specific Delta-V is exceeded, or a non-reversible restraint device is deployed. T0 may be defined differently for front, side, rear and roll-over events.
  - If multiple algorithm decisions (i.e.: frontal, side, rear and/or rollover) are made before the first recorded event ends, all of those events are part of the same event record and "T0" is defined as the "T0" from the first recorded event.
  - In the Pre-Crash data tables, the relative time marker "-0.1s" or "-0.25s" respectively represents the last set of data captured in the buffer prior to "T0."
- Torque Information:
  - Axle Torque - This indicates the E-Motor Torque multiplied by the gear ratio for battery electric vehicles only.
  - E-Motor Torque - This indicates the calculated torque from the output shaft of the electric motor in battery electric vehicles only.
- Traction Control Intervention Active - "Active" indicates wheel slippage was occurring during vehicle acceleration.

APPLICATION INFORMATION:

- Alfa Romeo Giulia, Alfa Romeo Stelvio, Fiat 500L, Fiat 500X, and Jeep Renegade are only CDR supported in the United States, Canada, and Saudi Arabia markets.
- Fiat 500/500e is only CDR supported in the United States, Canada, Mexico, and Brazil markets.

Hexadecimal Data

Data that the vehicle manufacturer has specified for data retrieval is shown in the hexadecimal data section of the CDR report. The hexadecimal data section of the CDR report may contain data that is not translated by the CDR program. The control module contains additional data that is not retrievable by the CDR system.
